P R E F A C E

The fourth decennial Population Census of Pakistan was conducted in March, 1981. It was preceded by a Housing Census in December, 1980. In the Population Census two questionnaires were used; one short (Annexure — A) containing minimum but basic questions and the other long (Annexure — B), which included all topics of the short questionnaire and some more usually included in a comprehensive population census. The long questionnaire was canvassed in respect of about ten per cent of total households selected on probability basis.

This report comprises two parts. Part—I contains the geographical description of the province including boundary changes in administrative units during the intercensal period of 1972–81. It also highlights the main findings from the data collected in the Population Census.

Part—II of this report contains 24 statistical tables. Tables 1–8, 12 and 24 gives data collected on complete count basis, i.e., data common in both short and long questionnaires. The remaining tables contain complete count data and also estimates obtained from data collected on sample basis, i.e., from long questionnaires only. An explanatory note on scope and tabulation of data is also given.

Census taking is a huge operation of immense national importance which provides wealth of population data for planning, decision making, evaluation, etc. This could not have been possible to be carried out but for the active cooperation of the provincial government departments. A deep debt of gratitude is, therefore, due to them and a large number of census enumerators and their supervisory staff who made this operation a success. We are also obliged to the United Nations Fund for Population Activities for their invaluable support in providing transport vehicles, equipment for training, office and printing, foreign training facilities and demographic advisory services. Our thanks also go to the Federal Bureau of Statistics for the assistance they provided initially in field and sampling work and later in processing the census data.

EXPLANATORY NOTE

The 1981 Population Census was conducted on both defacto and dejure basis. The data was, however, tabulated on dejure basis. The enumeration period of the census was spread over 15 days, i.e., from 1st to 15th March, 1981. The census date was, however, 1st March, 1981 to which the population data relates.

Questionnaire

The basic data, i.e., sex, age, marital status, religion, literacy, ability to read the Holy Quran (for Muslims only), educational attainment and language spoken was collected on complete count basis. While the other questions asked usually in population censuses were canvassed simultaneously in respect of only sample households, which include field of education, duration of residence in present district, district of previous residence, activity, occupation, industry, employment status, children ever-born & surviving and disability. Consequently two questionnaires, one long and the other short, were used. The data on children born alive and surviving in respect of ever-married women is not included in this report which is proposed to be published in a separate report.

Sample Design

The sample design used for selection of households for which the long questionnaire was used, was a stratified single stage sample design. The census blocks in whole of Pakistan excluding the Federally Administered Tribal Areas constituted the sampling frame. Rural and urban areas were considered separate domains. Each administrative district within a province was considered a stratum except large cities which constituted separate stratum within urban domain. The census blocks constituted single stage sampling units and were selected within each stratum with probability proportionate to number of households listed in the Housing Census. The sample size was determined keeping in view the level of geographical tabulation for which estimates were required and the permissible level of significance of estimates of some key characteristics. At the national level, the sample was 6.8 per cent of households in rural areas and 15.2 per cent in urban areas, representing 9.2 per cent of the total population.

Data given in tables 1 to 8, 12 and 24 are based on complete count. Statistics in rest of the tables have been estimated from the sample by ratio method. The formulae used to estimate total population, ratios, etc., are given below:

$$1. \quad \hat{Y} = \frac{1}{n} \sum_{i=1}^n \frac{y_i}{p_i}$$

$$2. \quad \hat{Y}_R = \left(\sum_{s=1}^k \hat{Y}_s / \sum_{s=1}^k \hat{X}_s \right) \times$$

where

- n = number of census blocks selected in sample within a domain,
- y_i = total value of the characteristics in i-th sample census block,
- p_i = probability of selection of i-th census block,

(ii)

- \hat{Y} = estimated population total of a domain,
- \hat{Y}_s = unbiased estimator of s-th stratum total of variable y,
- \hat{X}_s = unbiased estimator of s-th stratum total of another variable x,
- X = total persons of complete count within a sampling domain and
- \hat{Y}_R = ratio estimator, i.e., ratio of total persons of complete count within a sampling domain to the total number of persons in the sample.

Since some data was collected on sample basis, which was estimated according to the above procedure, it is possible that in some cases totals may not agree with their corresponding component parts.

Definitions and Concepts

Urban Areas

All localities which were either metropolitan corporation, municipal corporation, municipal committee, town committee or cantonment at the time of the census, were treated as urban.

Household

A household means a group of persons living together who have collective arrangement for eating. A person living alone was also considered to constitute a household. The distinguishing characteristic of a household is its common cooking arrangement.

Age

Age is recorded as of the last birthday.

Marital Status

Marital status has been classified into never-married, married, widowed and divorced. Never-married applies to persons who have never been married. Married includes all persons who are at present married and living as husband and wife as well as those married persons living apart but having a living wife/husband. Those couples, whose marriage (*Nikah*) had been solemnized but giving away ceremony had not taken place, were also treated as married. Widowed applies to a person whose husband or wife was dead but who had not married again. Divorced applies to both divorcer and divorcee, if not remarried.

Religion

Religion is recorded and tabulated as informed by the respondents.

Literate

A person who can read a newspaper and write a simple letter, in any language, is treated as literate.

Field of Education

(a) General Education

It includes educational programmes of primary, middle, matriculation, intermediate and bachelor's degree in arts or science.

Occupation

Occupation means the main job, profession, trade or kind/type of work usually performed by a person. In case of more than one occupation, the principal occupation is recorded. The principal occupation is that in which the person works most of the time. The classification used for tabulation of occupation data is given in Annexure – C.

Economic Activity (Industry)

Economic activity/industry means the activity of the organisation, or business in which a person usually works. The classification used for tabulation of economic activity/industry data is given in Annexure – D.

Employment Status

(a) *Self-employed*

Self-employed is a person who operates his own farm, business, or industry or practices a profession but does not employ any hired help, paid either in cash or kind.

(b) *Government employee*

A government employee is a person who works in any government/semi-government organisation for pay.

(c) *Private employee*

A Private employee is a person who works, for pay, for person/farm/shop/firm/organisation/office which is not run or managed by the federal/provincial/local government/autonomous body.

(d) *Employer*

Employer means a person who operates his own farm, business or industry or practices a profession and who employs one or more persons for the purpose.

(e) *Un-paid family helper*

Un-paid family helper means a person who works, without pay or profit, on family farm, business or industry.

Migrant Population

The migrant population means those who have moved from one administrative district to another administrative district. It excludes population who have moved within a district.

Disability

Disability refers to the physical and organic handicap of a person due to natural deformity or deficient functioning of any limb resulting from accident, disease, etc. It includes blind, deaf & dumb, crippled, mentally retarded and insane.

(b) *Technical/Engineering*

It includes engineering educational programmes in the fields of electrical, electronic, industrial, metallurgical, mining, mechanical, agricultural, forestry, chemical, petro-chemical, aviation, nautical, etc. It also includes programmes in survey, drafting and designing, all types of engineering technician programmes, all types of trade, craft and industrial programmes. Architectural and town planning programmes are also included.

(c) *Medicine/Tib*

It includes educational programmes of medical diagnostic and treatment techniques, medicine and surgery, medical X-ray techniques, dentistry, pharmacy, etc.

(d) *Health*

It includes educational programmes of public health, nursing, mid-wifery and other health related auxiliary programmes.

(e) *Commerce/Business Administration*

It includes educational programmes of typing, shorthand, clerical, secretarial, operation of office machines, book keeping, accountancy, electric data processing, business administration, marketing and sales, financial management and investment analysis, public administration, institutional administration, personal administration and other commercial, business and public administration programmes.

(f) *Teaching*

It includes all educational programmes which enable the teachers to teach all types of subjects to all categories of students. It includes education science programmes.

(g) *Agriculture/Forestry/Animal Husbandry*

It includes educational programmes of agriculture, forestry and fishing including general agriculture, animal husbandry, horticulture and gardening, crop husbandry, agricultural technology, food sciences and technology, veterinary, medicine, fishery science and technology, etc.

(h) *Law*

It includes educational programmes in jurisprudence, history of law, international law, labour law and maritime law, and other laws.

Civilian Labour Force

The civilian labour force means persons of 10 years and above age, of either sex, who are working for pay or profit and those not working but looking for work.

The labour force participation rate means the percentage of persons in labour force to total population.

In collection of the labour force data "usual status" approach has been adopted as against the approach of labour force surveys, where data is usually collected on "current status" basis.

Part - I
DESCRIPTION OF PROVINCE
AND
MAIN FINDINGS OF POPULATION CENSUS

1. GENERAL DESCRIPTION OF THE PROVINCE

1.1 Location

The word Punjab literally means five waters, i.e., five rivers, namely, Indus, Jhelum, Chenab, Ravi and Sutlej, flowing through the province which are its life-blood and mainstay.

The province is bounded in the north by NWFP and Federal Capital of Islamabad, in the north-east by the Azad State of Jammu and Kashmir and the Indian occupied part of the State of Jammu and Kashmir. In the east and south it is bounded by India, in the south-west by Sind Province and in the west by Baluchistan, FATA and NWFP. The province lies from 27°-40' to 34°-01' north latitude and from 69°-20' to 75°-20' east longitude. The total area of the province is 205,344 Sq.Kms.

1.2 Topography

The province is predominantly a level plain. However, there are some mountainous and hilly areas mostly in the north-west and extreme south-west of the province. There is also a plateau adjacent to these mountains known as the Potwar plateau and a desert belt in the south-eastern part of the province known as Cholistan. The province can be divided into four broad physiographic divisions. A brief account of these areas is given below:

a) *Mountainous and Hilly Area*

One of the two tracts of the mountainous and hilly areas lies in the north-west of the province. The hills in this tract consist of two important mountain ranges, that is the Sub-Himalayas or Siwaliks range in the north-east and the Salt range in the south of this tract. The mountains and hills in the northern part of Attock and north-eastern parts of the Rawalpindi and Jhelum districts consist of the extension of the Sub-Himalayas or Siwaliks range. The height of the mountain ridges in this part varies from 2,000 to 2,500 metres above sea level.

The hills of the Salt range lie in the central part of Jhelum and northern part of Sargodha districts. They run in nearly east-west direction and vary in height from 500 to 1,000 metres.

The second hilly tract lies in the south-western part of the province in D.G.Khan district. These hills form part of the Sulaiman range. The height of these hills increases from south to north, the highest point reaching about 3,000 metres above sea level.

b) *Potwar Plateau*

The Potwar plateau is bounded in the north by the Kala-Chitta and the Margalla ranges, in the east by the Jhelum river, in the south by the Salt range and in the west by the Indus river. It has an elevation of about 500 to 1,000 metres. Most of the area of the plateau slopes from north-east to south-west and drains through the Soan river into the Indus river. However, the south-eastern portion of the plateau slopes towards the east and drains into the Jhelum river. It is a typical 'bad-land' cut by deep set ravines.

c) *Plain Area*

The plain of the Punjab forms the extreme north-western part of the great Indo-Gangetic plain. It has been formed by the Indus and its tributaries and is called the Upper Indus plain. It slopes gradually towards the sea. The plain has been sub-divided by four large *doabs* or interfluves, namely, Sind Sagar doab, Chaj doab, Rechna doab and Bari doab. The central parts of these *doabs* are higher than the land closer to the rivers and are called *bars*. There are four *bars* in the province, namely, Kirna bar in Chaj doab, Sandul bar in Rechna doab and Ganji and Nili bars in Bari doab. These *bars* are the scalloped interfluves in between the two rivers.

Apart from the plain areas of *doabs*, the other plains lie east of the Sutlej and west of the Indus rivers. The plain east of the Sutlej river is commonly known as the Bahawalpur plain. It starts beyond the riverine tract and lies in between the Sutlej river and the Cholistan desert. The Derajat plain lies west of the Indus in between the Indus and the foot-hills of the Sulaiman range. It is also known as the Sulaiman piedmont. The surface of this plain is either flat or undulate.

d) *Desert Area*

The desert area lies in the extreme south-east of the province. It occupies parts of Bahawalnagar, Bahawalpur and Rahim Yar Khan districts along the Indian border. It is part of the great Thar desert and is known as Cholistan or Rohi. The surface of desert is a wild maze of sand dunes and sand ridges, occasionally rising about 150 metres above the surrounding areas.

1.3 Rivers and Streams

All the five rivers of the province originate from the snowy mountains of the Himalayas and pass through the province from north-east to south-west. They are perennial in nature. However, the volume of water increases during summer resulting some times in floods.

The Indus is the greatest of all the rivers. In the north, it flows in a deep gorge between Attock district and NWFP and thereafter flows generally along the western boundary of the province.

The Jhelum enters the province near Jhelum city. It separates Jhelum district from Gujrat and Sargodha districts and passing through Sargodha and Jhang districts joins the Chenab river at Trimmu.

The Chenab river enters the province in Sialkot district near the Marala Headworks. It separates Gujrat and Sargodha districts from Sialkot and Gujranwala districts and flowing through Jhang district it is joined by the Jhelum river at Trimmu.

The Ravi river enters the province at a point north of Shahdara. It separates Sheikhpura and Faisalabad districts from Lahore, Sahiwal and Multan districts and joins the Chenab river at the junction of Multan, Jhang and Muzaffargarh districts.

The Sutlej river enters the province at the Sulaimanke Headworks. It separates Sahiwal, Vehari and Multan districts from Bahawalnagar and Bahawalpur districts and joins the Chenab river at a point north of Uch. The combined rivers of Jhelum, Chenab, Ravi and Sutlej till falling into the Indus river at Mithan Kot are called Panjnad.

There are a few other important rivers and streams. These include the Soan river in Potwar plateau and the Haro river north of the Kala-Chitta range in Attock district. Among the important streams, Aik and Degh enter the province in Sialkot district from the north. The former flows through Sialkot and Gujranwala districts and falls in the river Chenab while the latter flows through Sialkot, Gujranwala and Sheikhupura districts before falling in the Ravi river. There are also few important streams in Dera Ghazi Khan district, which originate from the Sulaiman range and flow from west to east before falling in the Indus river.

1.4 Vegetation

The vegetation of an area generally comprises forests, shrubs and grasses. The climate of the Punjab is, generally, too dry for the growth of natural forests. Some good reserves of forests are however, found in the mountainous and hilly areas of Murree and Kahuta *tehsils* of Rawalpindi district. The principal trees in the upper reaches of these forests are *Deodar, Biar, Paludar, Barangi*. In the lower hills at altitudes between 1,000 to 2,000 metres the common trees are *Chir, Kao, Phulahi* and *Sinatha*. Further down in the plain the most common trees are *Shesham, Tut, Drek, Ber* and *Kikar*.

There are also some important plantation forests in the plain areas of the province. These forests are found at Chhanga Manga in Kasur district, Chichawatni in Sahiwal district, Piranwala in Multan district, Shorkot in Jhang district, Kamalia in Toba Tek Singh district and Dafar in Gujrat district. Important trees in these forests are *Shesham, Kikar, Tut* and *Somul*.

Shrub forests are found over a large area of the northern and north-western foot-hills and plains. Main trees are *Farash, Kangar, Karir, Akk* and *Bakain*.

The grasses are found in many parts of the province. The main varieties of the grasses are *Phalwan, Sarkanda, Kunder, Sarut, Dab, Lanna, Dhaman, Chhembar, Khabbal* and *Madhana*.

1.5 Climate

The climate of the Punjab is continental with marked temperature fluctuations both seasonal and diurnal with significant aridity.

The winter season starts in November and lasts till March. January is the coldest month of this season. The temperature decreases from south to north. The mean maximum temperature during the months of December, January and February at Rawalpindi is 23°C as against 28°C at Multan. The weather in this season is occasionally affected by western wind disturbances which are formed along the Mediterranean Front and reach Pakistan after crossing Iraq, Iran and Afghanistan. These winds lower the temperature which occasionally falls below freezing point in some parts of the plain.

The summer season starts in April and lasts till October. June is the hottest month of the season in most of parts of the province. High temperature and aridity are the main characteristics of this season. The temperature increases from north to south. The mean maximum summer temperature for the months of May, June and July at Rawalpindi is 39°C compared to 42°C at Multan. The hill stations in Murree *tehsil* in Rawalpindi district have comparatively low temperature.

Most of the rainfall in the province is caused by the summer Monsoons, when the winds blow from the sea. The Monsoons set in the middle of June gain strength in July and remain constant till the end of August. Most of the rainfall is associated with summer Monsoons and is received during July–September. The rainfall is higher in the northern and north-eastern part of the province and gradually decreases towards the south. The winter rainfall is caused due to western disturbances. The winter rainfall is higher in the north and west and decreases towards the south and east. A table showing mean maximum and minimum temperatures for the months of May, June and July in summer and December, January and February in winter alongwith annual precipitation recorded at different stations of the Punjab province is given below:

Place	Mean temperature (°C)				Rainfall (millimetres)
	Summer		Winter		
	Maximum	Minimum	Maximum	Minimum	
1	2	3	4	5	6

1.6 Administrative Units

At the time of 1981 Census there were 21 districts compared to 19 districts in 1972 Census. The districts are divided into sub-divisions. Mostly one sub-division comprises one *tehsil*. However, in Attock and Taunsa sub-divisions, there are two *tehsils* in each sub-division and on the other hand in Lahore district, there is one *tehsil* comprising three sub-divisions. Each *tehsil* is divided into *qanungo circles* (QC), *qanungo circle* into *patwar circles* (PC) and *patwar circle* into *mauzas* (revenue estates).

The detail of the changes during the intercensal period 1972-81 is given below:

2. POPULATION SIZE, GROWTH AND DISTRIBUTION

2.1 Population Size and Growth

The population of the Punjab province has more than doubled since the first population census of Pakistan in 1951. It was 47,292 thousand in 1981 compared to 20,554 thousand in 1951, resulting in an increase of 130 per cent since then. The population of the province increased by 25.7 per cent during the 1972-81 intercensal period (8 years and 5½ months) at an average annual growth rate of 2.7 per cent, whereas this rate was 3.4 per cent during 1961-72 (11 years and 7½ months). However, during 1951-61 this rate was only 2.2 per cent. Most of the population growth thus took place during the last two decades. If the population continues to grow at its present rate, it is likely to double in 26 years. Table 2.1 gives population and intercensal increase of the province since 1951.

TABLE 2.1 — POPULATION AND INTERCENSAL INCREASE SINCE 1951

Description	1951	1961	1972	1981
1	2	3	4	5
Population (in thousand)	20,554	25,462	37,610	47,292

The Punjab has 56.1 per cent population of Pakistan and stands atop amongst provinces according to population size and second in respect of area which is 205,344 Sq.Kms. Its population is two and a half times of the population of Sind and four times of NWFP. The population density of the province is 230 persons per Sq.Km. which is the highest amongst provinces. Table 2.2 gives area, population and density of the Punjab alongwith other provinces.

2.2 Population Size and Density by Districts

The population of the province is unevenly distributed amongst its districts. The district of Faisalabad has the maximum population, i.e., 9.9 per cent, followed by 8.6 in Multan 7.6 in Sahiwal 7.5 in Lahore and the remaining in the other districts. The districts of Attock and Jhelum have the smallest population percentage, i.e., 2.4 and 2.5 respectively as shown in Table 2.3.

Like population distribution, density is also not uniform amongst districts. The districts of Lahore, Faisalabad and Sialkot are thickly populated with density of 2,001, 515 and 507 persons per Sq.Km. respectively. Bahawalpur, D. G. Khan and Mianwali have the lowest density of 59, 65 and 98 persons per Sq.Km. respectively. All other districts have a density of more than 100 persons per Sq.Km.

2.3 Household Size

The average household size for the province is 6.4 persons, the same as it was in 1972. Variation in the average household size exists among districts as given in Table 2.3: Rahim Yar Khan and Lahore have the largest household size of 6.9 persons followed by 6.8 persons in Gujranwala. The smallest average household size of 5.5 persons is recorded in Attock and Jhelum.

2.4 Urban Population

The urban population of the province is 13,052 thousand which constitutes 27.6 per cent of its total population. It has increased marginally from 24.4 per cent in 1972. The average annual growth rate of urban population has, however, decreased from 4.5 per cent during 1961-72 to 4.2 during 1972-81. There are 215 urban localities in the province comprising 6 Municipal Corporations, 60 Municipal Committees, 131 Town Committees and 18 Cantonments. Most of the urban localities have a population of less than 25 thousand. The population of Lahore Municipal Corporation is more than twenty-five *lakh*. One urban locality has a population more than ten *lakh* and 5 more than two *lakh*.

The district of Lahore has the largest urban population which is 84 per cent of its total population followed by Rawalpindi district having 48 per cent. The lowest urban population was 10 per cent in Muzaffargarh district. Table 2.4 gives number of urban localities, urban population and its percentage and intercensal average annual growth rate.

2.5 Religion

The population of the province is predominantly Muslim. They constitute 97.5 per cent of the total population; 97.8 per cent in rural and 96.6 in urban areas. The important minorities are Christians and Ahmadis who are 2.2 and 0.1 per cent respectively. Other minorities who constitute only 0.1 per cent of the total population include Hindus, Parsis, Sikhs and Budhists. Table 2.5 gives the percentage distribution of the total population by religion and rural/urban residence.

2.6 Languages Spoken

No question on mother tongue was asked in respect of individuals in the 1981 Population Census. However, there was a question on "language spoken in the household". Punjabi is the most common language spoken by 78.7 per cent. Siraiki and Urdu are the other languages usually spoken, whose percentage is 14.9 and 4.3 respectively. Pushto, Baluchi and Sindhi are spoken by 0.76, 0.57 and 0.08 per cent. Table 2.6 gives the percentage distribution of households by language spoken.

3. SEX, AGE AND MARITAL STATUS

3.1 Sex Ratio

The sex ratio or the percentage of males compared to females is an important demographic variable. It is primarily affected by this ratio at birth and later by sex differentials in mortality and migration beside under or over enumeration. The sex ratio in turn affects fertility, mortality, migration, labour force composition, etc.

The preponderance of males over females has been a usual feature of Pakistan and its areas. The sex ratio of the Punjab is 110.8, the second highest amongst provinces. It has decreased compared to 116.1 in 1972. There is variation between the sex ratios of rural and urban areas which are 109.7 in rural and 114.0 in urban areas. The sex ratio also varies with different age groups. It is 102.8 between ages 0–4, rises upto ages 10 – 14 where it is 116.2 and then tapers off reaching to its lowest level of 100.0 between ages 40–44 from where it again increases with irregular humps and reaches its maximum, i.e., 144.0 for ages 70 – 74. Table 3.1 gives detail of sex ratios by age groups.

3.2 Age Structure

Every population has a unique age structure which has a considerable impact on its demographic and socio-economic characteristics, since all aspects of human actions and behaviour tend to depend and change with age. Like other developing countries, age reporting is poor in Pakistan. This could be ascribed to ignorance of ages as majority of population is illiterate, deliberate mis-statement of ages particularly of un-married girls and elderly people, helplessness in reporting ages in the absence of proper record and because of recall lapses and finally to a tendency to report ages ending in 0 and 5 followed by even numbers. In spite of all these problems, efforts were made to ensure better reporting of ages by asking probing questions with reference to ages of other household members and important events of the area.

According to the 1981 Population Census, children, aged below 15 are 43.4 per cent of the total population, the same as in 1972. Out of these 14.9 per cent are below 5 years of age including 3.0 per cent infants. The population of 65 years and above is 4.9 per cent. The population of the 'working' age group, i.e., 15 to 64 years thus comes to 51.7 per cent, a little higher than half of the total population giving an age dependency ratio of 93 per cent, the same as in 1972. This ratio is 96 and 88 per cent for rural and urban areas respectively.

The adult population, 18 years and above, in the province is 50.9 per cent. This percentage is 51.0 in rural and 50.6 in urban areas and 51.3 for males and 50.5 for females. The population eligible to vote, 21 years and above, is 43.5 per cent. Their percentage in rural and urban areas is 43.8 and 42.8 respectively. The percentage of population by important age-groups, sex and rural/urban areas is given in Table 3.2.

3.3 Marital Status

All individuals aged 15 years and above enumerated in the 1981 Population Census were classified according to their marital status, namely, married, never-married, widowed and divorced. Out of them 25.2 per cent are never-married, 68.4 currently married, 6.1 widowed and negligible percentage divorced. The percentage of never married amongst males is 30.9, much higher than for females which is 18.7. This differential is also reflected through the mean age at marriage which is 20 years for females compared to 25 years for males. Table 3.3 gives percentage distribution of marital status by sex and age groups.

3.4 Females of Reproductive Ages by Marital Status

Out of the total female population, 43.8 per cent is between reproductive ages, i.e., 15 to 49 years, which is close to 1972, when this percentage was 44.0. The percentage is more in urban where it is 45.3 compared to 43.3 in rural areas.

Among the females in reproductive ages 23.4 per cent are never married, 73.8 currently married, 2.3 widowed and 0.5 divorced. Table 3.4 gives percentage distribution of females of reproductive ages by marital status and rural/urban residence.

3.5 Disabled Persons

The disabled persons constitute 0.4 per cent of the total population. Among them 55.0 per cent are females and 45.0 males. The percentage of blind is the highest, i.e., 29.9; 22.1 for males and 36.2 for females. The crippled persons are 19.2 per cent for both sexes, 22.6 for males and 16.4 for females. The deaf and dumb are 13.8 per cent. Table 3.5 gives the percentage of disabled population by sex and nature of disability.

4. LITERACY AND EDUCATIONAL ATTAINMENT

4.1 Literacy

In the 1981 Population Census the question to enquire whether a person was literate or not was worded as "whether a person can read a newspaper and write a simple letter", while in the 1972 Population Census it was asked "whether a person can read and write with understanding". Though their meanings are the same, yet it is possible that it might have resulted in a little lower rate of positive responses regarding literates because its wording was quite specific. However, in both the censuses all those who had passed primary level were ipso-facto deemed as literate.

The literacy ratio of the province among the population aged 10 years and above is 27.4 per cent slightly higher than the literacy ratio for the whole of Pakistan which is 26.2 per cent. However, it has increased by 6.7 percentage points since 1972 when it was 20.7 per cent. It is higher for males, i.e., 36.8 compared to 16.8 for females. There are sharp differences in the literacy ratios of rural and urban areas. The literacy ratio in urban areas is 46.7 compared to 20.0 in rural areas. There is also a wide contrast between male and female literacy ratios in both the areas. In rural areas the ratio of female to male literacy is 1 to 3 and in urban it is 1 to 1.5. Table 4.1 gives literacy ratio by sex and rural/urban residence for the years 1972 and 1981.

Urban	46.72	55.23	36.72	38.95	47.83	28.04

4.2 Educational Attainment

Education meets the shortage of trained and qualified manpower which is an important factor for increasing productivity and accelerating economic growth. Data on educational attainment is, therefore, essential primarily for development plans, one source of which is the population census.

The percentage of educated persons like literacy ratio is not high enough. Only 24.5 per cent of the population aged 10 years and above, excluding those below primary, are educated in the province compared to 22.9 per cent for the whole of Pakistan. The remaining 75.5 per cent have never attended any educational institution. Out of the above 24.5 per cent nearly one-third is currently enrolled.

Large variations exist in the ratio of educated persons in rural and urban areas as well as for males and females. The percentage for males is 33.5 and for females 14.3. It is 17.5 per cent for rural as against 42.7 for urban areas. Table 4.2 gives the ratio of educated persons by sex and rural/urban residence.

4.3 Enrolment Ratio

The enrolment ratio, measured as percentage of students to population 5 – 24 years of the province is 14.1 compared to 14.8 for the whole of Pakistan. The enrolment ratio differs sharply from rural to urban areas as well as for males and females. It is higher for males, i.e., 18.3 per cent compared to 9.5 for females. The enrolment ratio in urban areas is 23.4 per cent compared to 10.4 in rural areas. There is also sharp difference between male and female enrolment ratio in rural areas where the ratio of female to male enrolment is 1 to 3. However, in urban areas this ratio is 1 to 1.2. Table 4.3 gives enrolment ratio by sex and rural/urban residence.

4.4 Level of Education

Out of the total educated persons, 45.5 per cent have passed primary, 24.2 middle and 19.8 matriculation. After matriculation the percentage falls to 5.3 for intermediate, 2.8 for BA/BSc and 0.8 for MA/MSc. The percentages of engineering, medical and law-graduates are 0.16, 0.17 and 0.23 respectively. Table 4.4 gives the distribution of educated persons by sex, educational attainment and rural/urban residence.

4.5 Ability to Read the Holy Quran

There was an additional question for the Muslims on 'Ability to read the Holy Quran'. Over forty per cent of the Muslim population aged 10 years and above, have the ability to read the Holy Quran as against 7.7 per cent who could not read it. However, 51.7 per cent were found to be learning to read the Holy Quran. The percentage of population who could read the Holy Quran is higher in urban areas, i.e., 54.0 compared to 35.5 in rural. The ability to read the Holy Quran in respect of female is higher, i.e., 46.8 per cent compared to 35.1 per cent for males though their literacy ratio varies from 16.8 per cent for females to 36.8 for males. Table 4.5 gives the percentage distribution of Muslims along with their ability to read the Holy Quran by sex and rural/urban residence.

5. MIGRATION

5.1 Introduction

Migration data covers movement of population from one district to another in the same province, from one province to another and Pakistani emigrants. It does not cover persons who changed their places of residence within their own district because the question on migration was designed not to include the movement of population within a district. The word of 'district' in the 1981 Population Census was substituted for 'place' used in the follow-on survey of the 1972 Population Census, since the place could be confused for a village, town, city, *tehsil* or district. Furthermore, it would have been an arduous tabulation job, if tabulated at place level.

5.2 Migration

The number of migrants in the province is 6,315,775 who constitute 13.4 per cent of the total population. Out of these migrants, 42.2 per cent moved from one district to another within the province and 50.4 per cent came from outside the province (5.6 per cent from other provinces, 1.2 from AK/NA, 43.6 from other countries) and 7.4 per cent from places the previous residence of which was not reported by the respondents. Table 5.1 gives the detail of migrants.

5.3 In-migrants

Out of the 354,694 in-migrants from other provinces, 55.5 per cent came from NWFP, 26.0 from Sind, 15.3 from Baluchistan and the remaining 3.2 per cent from FATA and Islamabad. Of these in-migrants 82.8 per cent came from rural areas, of which 38.3 per cent settled in rural and 44.4 in urban areas. Out of the remaining 17.2 per cent who came from urban areas, 4.8 per cent settled in rural and 12.4 in urban areas. Table 5.2 gives detail of migrants from other provinces.

5.4 Migrants within the Province

Out of the 2,667,196 migrants, who moved from one district to another within the province, 85.7 per cent moved from rural areas, 51.6 settling in rural and 34.1 in urban areas. Out of the remaining 14.3 per cent who came from urban areas, 4.0 settled in rural and 10.3 in urban areas. Table 5.3 gives their detail.

5.5 Out-migrants

849,043 persons from the Punjab are found living in other provinces. Out of these, 74.4 per cent are living in Sind, 11.7 in NWFP, 6.6 in Baluchistan and 7.3 in Islamabad. Most of these out-migrants, i.e., 87.6 per cent, went from rural areas of the province, 65.1 settling in urban and 22.5 in rural areas. Out of the remaining 12.4 per cent who went from urban areas, 10.2 settled in urban and 2.2 in rural areas. Simultaneously, 735,285 persons are found to have gone abroad. Table 5.4 gives detail of out-migrants by provinces.

5.6 Net Migration

In short as a result of migration the Punjab gained 2,333,962 persons, excluding 465,574 persons who failed to report their previous place of residence. This constitutes 4.9 per cent of the provincial population.

6. ECONOMIC CHARACTERISTICS

6.1 Labour Force

No economic development planning can be considered complete without incorporating manpower planning. Beside availability of data from other sources, the population censuses provide bench-mark data for this purpose. However, its scope is limited compared to the data available from labour force and manpower surveys because of the constraint of the number of questions, since a variety of topics is to be covered in the population census. The scope of the manpower data in the 1981 Population Census is restricted to civilian labour force, i.e., employed and un-employed (not working but looking for work) alongwith data on their economic activities or industries, occupations and employment status. Furthermore, the data was collected according to the usual status approach rather than the current status approach used in labour force surveys.

The labour force of the Punjab is 27.8 per cent of the total population against 27.5 per cent for the whole of Pakistan. It is, however, 39.9 per cent of the population aged 10 years and above. The population not in labour force comprises children below 10 years, housewives, students and others, the percentages of which to the total population are 30.2 for children below 10 years, 30.0 for housewives, 5.4 for students and 6.5 for others. Table 6.1 gives the percentage of population by economic categories.

TABLE 6.1 – POPULATION BY ECONOMIC CATEGORIES, SEX AND RURAL/URBAN AREAS: 1981

Un-employment rate	3.16	2.97	7.66	2.54	2.35	7.20	5.00	4.83	8.85

There is a wide variation between male and female participation rates. It is 50.8 per cent for males compared to only 2.3 for females, resulting in very low overall participation rate compared to other countries, though the male participation rate compares favourably with other countries. Generally labour force participation rate is affected by level of industrialization, agricultural development, educational attainment, socio-economic norms,

etc. but in case of Pakistan the participation rate is primarily off-set by the low level of female participation. The rural/urban difference in labour force participation rate is not much as it is 28.7 per cent in rural and 25.5 in urban areas.

6.2 Un-employment

The un-employment rate is the percentage of persons un-employed to total labour force. The un-employment rate of the province is 3.2 per cent compared to 3.1 for the whole of Pakistan. The un-employment rate varies for males and females as well as for rural and urban areas as given in Table 6.1. The un-employment rate is 3.0 per cent for males and 7.7 for females. It is 2.5 per cent for rural and 5.0 for urban areas.

6.3 Labour Force by Occupation

Forty-seven per cent of the total labour force is in the occupation group of 'agricultural, animal husbandry and forestry workers, fishermen and hunters'. The next higher occupation group comprising 28.6 per cent is of 'production and related workers, transport equipment operators and labourers' followed by 8.6 per cent 'sales workers' and 4.3 per cent 'service workers'. The percentage distribution of labour force by occupation groups, sex and rural/urban residence is given in Table 6.2.

TABLE 6.2 – LABOUR FORCE BY OCCUPATION, SEX AND RURAL/URBAN AREAS: 1981

Workers not classified by occupation	3.83	3.59	0.24	2.79	2.59	0.19	6.90	6.52	0.38

The pattern of occupation groups varies significantly in urban and rural areas. In rural areas most of the labour force, i.e., 60.7 per cent, is 'agricultural, animal husbandry and forestry workers, fishermen and hunters' followed by 23.6 per cent 'production and related workers, transport equipment operators and labourers'. In urban areas most of the labour force, i.e., 43.2 per cent, is 'production and related workers, transport equipment operators and labourers' followed by 'sales workers' who account for 19.9 per cent.

6.4 Working Population by Industry

Most of the working population, i.e., 49.1 per cent, is engaged in 'agriculture, forestry, hunting and fishing' and the remaining 50.9 per cent in non-agricultural industries. Out of those in non-agricultural industries 14.8 per cent are engaged in 'community, social and personal services' followed by 11.7 in 'manufacturing'. The persons engaged in 'whole-sale and retail trade, restaurants and hotels', 'construction' and 'transport, storage and communications' industries are 18.6 per cent of the total working population.

In rural areas the most important industry is 'agriculture, forestry, hunting and fishing' which accounts for 62.7 per cent. The other important industry group in rural areas is 'community, social and personal service' in which 10.8 per cent are engaged. In urban areas 26.7 per cent of the total working population is engaged in 'community, social and personal services' followed by 22.9 per cent in 'whole-sale and retail trade, restaurants and hotels' and 21.0 per cent in 'manufacturing' industries. Table 6.3 gives the detail of working population by industry.

6.5 Working Population by Employment Status

The percentage of the working or employed population to the population 10 years and above is 38.7 which is 96.8 of the total labour force. Out of this 57.1 per cent are self-employed, 25.9 working as employees and 15.1 un-paid family helpers, most of whom are females. Table 6.4 gives percentage of working population by employment status.

The percentage of working population by employment status varies significantly in urban and rural areas. In rural areas the majority, i.e., 61.2 per cent, is self-employed followed by 19.0 per cent employees and 18.2 un-paid family helpers. On the other hand, in urban areas 46.6 per cent are employees compared to 44.9 per cent self-employed and only 5.7 per cent un-paid family helpers.
