PATTERNS OF EXPORT DIVERSIFICATION

Evidence from Pakistan

Hamna Ahmed and Naved Hamid

Introduction

- The World Bank 2013 report identifies "**slow product diversification**", as reflected in Pakistan's exports, as the **key structural constraint** which explains "What is holding Pakistan back".
- Usually product diversification is measured by changes in the product concentration index (PCI)

Historical Trend in Degree of Concentration (1972-2012)

- Pakistan has not done too badly on PCI

Introduction

- However, there is a need dig deeper into the process of diversification. In this paper we introduce two new measures which allow us to do that.
- Following (**Piñeres&Ferrantino,1997**), we construct an **Average Traditionality Index (ATI)** for each industry and a **Structural Change Index (SC)** for each year since 1972.
 - ATI is the mean of the cumulative export index for each industry
 - SC is the variance of ATI calculated across industries but using five-year intervals rather than the full sample period

Research Objectives

- Assess the degree of traditionality in all 2-digit export industries over time.
- Study the degree of medium run structural change that has occurred in the country's export sector from 1972 to 2012
- Explore the determinants structural change in the export sector.

Methodology

- To assess traditionality level across industries:

$$trad_t^k = \frac{\sum_{1972}^t e_t^k}{\sum_{1972}^{2012} e_t^k} \quad (1)$$

$$avg_trad^k = \frac{\sum_{t_0}^T trad_t^k}{T - t_0 + 1} \quad (2)$$

$trad_t^k$ Traditionality Index (or cumulative export experience function) of industry k in year t

$\sum_{1972}^t e_t^k$ Sum of real exports for industry k from 1972 to t

$\sum_{1972}^{2012} e_t^k$ Sum of real exports for industry k from 1972 till 2012

avg_trad^k Average Traditionality Index for each industry k between 1972-2012

- To assess medium run structural change:
 - The traditionality index is re-calculated using 5 year intervals ($trad5$)
 - Variance of $trad5$ is used as a measure of structural change.

$$sc_t = Var(trad5_{k_0}^k)_t \quad (3)$$

Methodology

- To study determinants of **structural change**, the following regression model is estimated:

$$sc_t = \alpha + \beta_1 \mathbf{Liberalization}_{t-1}^{PK} + \beta_2 \mathbf{PCI}_{t-1}^{PK} + \beta_3 \log(\mathbf{RER})_{t-1}^{PK} + \beta_4 \mathbf{GDP} \mathbf{growth}_{t-1}^{PK} + \beta_5 \mathbf{Ex} \mathbf{growth}_{t-1}^{PK} + \beta_6 \mathbf{Trade} \mathbf{growth}_{t-1}^{WORLD} + \varepsilon_t$$

$$\mathbf{Liberalization}_t^{PK} = \frac{\text{Import Duty Revenue}_t}{\text{NonOil,NonFood Imports}_t}$$

$$\mathbf{PCI}_t = (\sum_k W_{it}^2)^{1/2}$$

$$\mathbf{RER}_t^{PK} = \frac{E_t^{PKR \text{ to USD}} \cdot \mathbf{WPI}_t^{USA}}{\mathbf{CPI}_t^{PK}}$$

$\mathbf{GDP} \mathbf{growth}_t^{PK}$ Growth rate of real GDP for Pakistan,

$\mathbf{Ex} \mathbf{growth}_t^{PK}$ Growth rate of exports,

$\mathbf{Trade} \mathbf{growth}_t^{WORLD}$ Growth rate of world trade

Ranking according to Average Traditionality Levels (ATI) of 30 main Export Industries, that contributed 97% of total exports in 2012

Traditionality Rank of Top Five Export Industries (SITC-2digit level)

UN Code	Description	Average Traditionality Index	Variance of Traditionality Index	Traditionality Rank	Share in Total Exports (2012)
65	Textile yarn, fabrics, made-up articles & related products	0.363	0.092	19	35.37
84	Articles of apparel & clothing accessories	0.288	0.098	12	17.12
04	Cereals and cereal preparations	0.438	0.066	23	9.44
89	Miscellaneous manufactured articles	0.306	0.075	15	8.62
66	Non-metallic mineral manufactures	0.218	0.051	8	2.55

Traditionality Rank of Top Five Export Industries in the UN89 Category (SITC-3 Digit level)

UN Code	Description	Average Traditionality Index	Variance of Traditionality Index	Traditionality Rank	Share in Total Exports (2012)
897	Jeweller and semiprecious materials	0.084	0.04	1	6.62
894	Baby carriages, toys, games and sporting goods	0.393	0.11	7	0.89
893	Articles, n.e.s., of plastics	0.194	0.07	3	0.44
899	Miscellaneous manufactured articles, n.e.s.	0.498	0.09	8	0.15
892	Printed matter	0.522	0.09	9	0.04

Traditionality Levels Across Top Five Export Industries (SITC -2 Digit Level)

Traditionality Levels Across Top 5 Export Industries in UN89 Category (SITC-3 Digit Level)

Traditionality Levels of SME Industries (1972-2012)

— Power-generating Machinery & Equipment (Fans)

— General Industrial Machinery & Parts

— Road Vehicles

— Furniture

— Specialized Machinery (civil engineering)

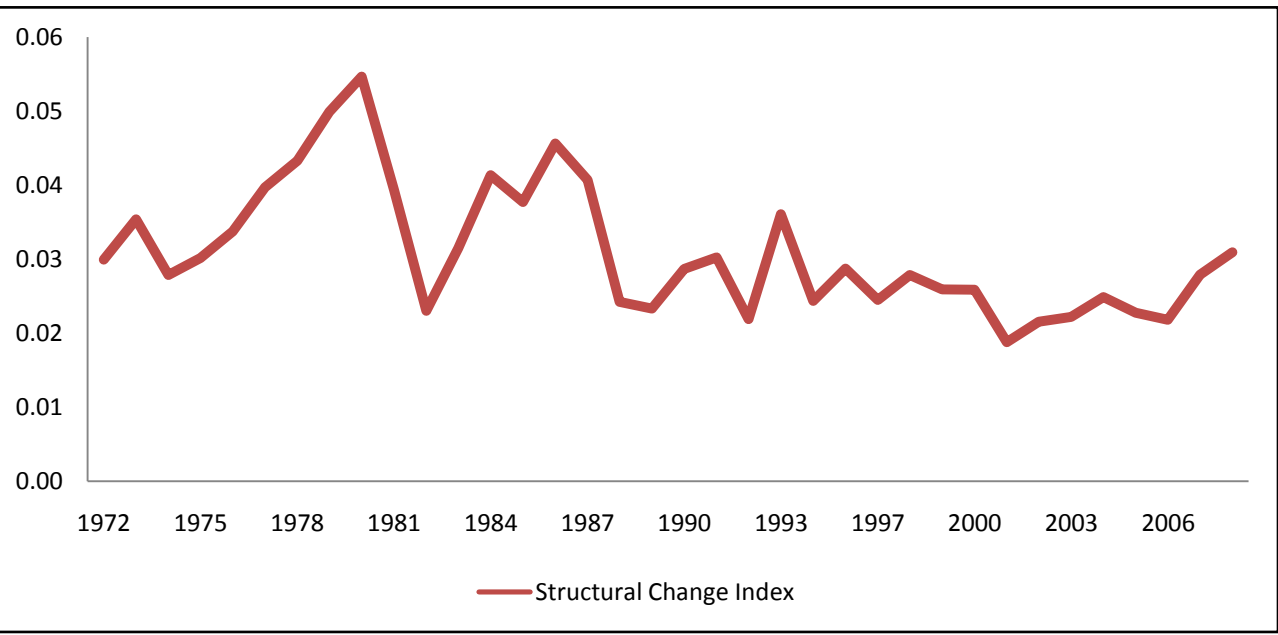

— Telecommunications & Sound Recording

— Other Transport Equipment (boats)

Conclusions

- Trade liberalization seems to be the main factor in affecting medium term structural change in the export sector.
- The current export base is significantly traditional: the share of least traditional industries only accounted for one tenth of total exports in 2012.
