

“

We thank our customers and clients for the business they directed to Barclays in 2008. High levels of activity on their behalf have enabled us to report substantial profit generation in difficult conditions. Our priorities in 2008 were (and remain): to stay close to customers and clients; to manage our risks; and to progress strategy.

”

John Varley

Forward-looking statements

This document contains certain forward-looking statements within the meaning of Section 21E of the US Securities Exchange Act of 1934, as amended, and Section 27A of the US Securities Act of 1933, as amended, with respect to certain of the Group's plans and its current goals and expectations relating to its future financial condition and performance. Barclays cautions readers that no forward-looking statement is a guarantee of future performance and that actual results could differ materially from those contained in the forward-looking statements. These forward-looking statements can be identified by the fact that they do not relate only to historical or current facts. Forward-looking statements sometimes use words such as 'may', 'will', 'seek', 'continue', 'aim', 'anticipate', 'target', 'expect', 'estimate', 'intend', 'plan', 'goal', 'believe' or other words of similar meaning. Examples of forward-looking statements include, among others, statements regarding the Group's future financial position, income growth, assets, impairment charges, business strategy, capital ratios, leverage, payment of dividends, projected levels of growth in the banking and financial markets, projected costs, estimates of capital expenditures, and plans and objectives for future operations and other statements that are not historical fact. By their nature, forward-looking statements involve risk and uncertainty because they relate to future events and circumstances, including, but not limited to, UK domestic and global economic and business conditions, the effects of continued volatility in credit markets, market related risks such as changes in interest rates and exchange rates, effects of changes in valuation of credit market exposures, changes in valuation of issued notes, the policies and actions of governmental and regulatory authorities, changes in legislation, the further development of standards and interpretations under International Financial Reporting Standards (IFRS) applicable to past, current and future periods, evolving practices with regard to the interpretation and application of standards under IFRS, progress in the integration of the Lehman Brothers North American businesses into the Group's business and the quantification of the benefits resulting from such acquisition, the outcome of pending and future litigation, the success of future acquisitions and other strategic transactions and the impact of competition – a number of which factors are beyond the Group's control. As a result, the Group's actual future results may differ materially from the plans, goals, and expectations set forth in the Group's forward-looking statements.

Any forward-looking statements made herein speak only as of the date they are made. Except as required by the UK Financial Services Authority (FSA), the London Stock Exchange or applicable law, Barclays expressly disclaims any obligation or undertaking to release publicly any updates or revisions to any forward-looking statements contained in this announcement to reflect any change in Barclays expectations with regard thereto or any change in events, conditions or circumstances on which any such statement is based. The reader should, however, consult any additional disclosures that Barclays has made or may make in documents it has filed or may file with the Securities Exchange Commission (SEC).

Delivering our strategy

Our strategy is to achieve good growth through time by diversifying our business base and increasing our presence in markets and segments that are growing rapidly.

Consistent strategic priorities:

- Build the best bank in the UK
- Accelerate growth of global businesses
- Develop Retail and Commercial Banking activities in selected countries outside the UK
- Enhance operational excellence

“

In a very difficult economic environment in 2008, Barclays has steered a course that has enabled us to be solidly profitable despite strong headwinds. We are well positioned to maintain Barclays competitive strengths through the undoubted challenges that will come in 2009 and beyond.

”

Highlights of the year

Group profit before tax was £6,077m, down 14% on 2007. Profit included:

- Gains on acquisitions of £2,406m, including £2,262m relating to Lehman Brothers North American businesses
- Profit on disposal of the closed life assurance book of £326m
- Gains on Visa IPO and sales of shares in MasterCard of £291m
- Gross credit market losses and impairment of £8,053m
- Gains on own credit of £1,663m

Global Retail and Commercial Banking profit before tax increased 6% to £4,367m

- UK lending increased to both retail and corporate customers
- Strengthened international presence in Barclaycard, Western Europe and Emerging Markets

Investment Banking and Investment Management profit before tax was £2,568m, down 24% reflecting significant gain on acquisition and disposal and the impact of credit market dislocation

- Barclays Capital's strategy of diversification by geography and business accelerated through the acquisition of Lehman Brothers North American businesses
- There were strong net new asset flows into Barclays Wealth and Barclays Global Investors despite declines in equity markets

Group balance sheet growth was driven by over £900bn derivative gross-up, growth in loans and advances of £124bn and impact of foreign exchange rates on non-Sterling assets

Risk weighted assets increased 22% (£79bn) to £433bn reflecting:

- the significant depreciation in Sterling relative to both the US Dollar and the Euro
- procyclicality: macroeconomic indicators generally, and corporate credit conditions specifically, deteriorated towards the end of 2008 leading to ratings declines

Capital ratios were strengthened through the raising of £13.6bn of Tier 1 capital. The year-end pro forma Tier 1 capital ratio was 9.7% and the pro forma Equity Tier 1 ratio was 6.7%

Barclays targets reduced adjusted gross leverage and capital ratios significantly ahead of regulatory requirements

Building the best bank in the UK

Barclaycard contactless technology

In 2008 Barclaycard issued over one million contactless payments cards in the UK, with more than 7,000 shops now having the technology to use the cards installed. The cards enable people to pay for items costing £10 or less by simply swiping them against a sensor and Barclaycard research shows 98% of people with a contactless payment card think it is easy to use and 88% think it speeds up payment times.

Financial KPIs

Definition

Profit before tax

Profit before tax is one of the two primary profitability measures used to assess performance and represents total income less impairment charges and operating expenses.

Why it's important to the business and management

Profit before tax is a key indicator of financial performance to the majority of our stakeholders.

2006	2007	2008
£7,136m	£7,076m	£6,077m

Economic profit

Economic Profit (EP) is the other primary profitability measure used by Barclays. EP is profit after tax and minority interests less a capital charge (average shareholders' equity and goodwill excluding minority interests multiplied by the Group cost of capital).

Barclays believes that economic profit encourages both profitable growth and the efficient use of capital. Barclays has a set of four year performance goals for the period 2008 to 2011 inclusive. The primary goal is to achieve compound annual growth in economic profit in the range of 5% to 10% (£9.3bn to £10.6bn of cumulative economic profit) over the 2008 to 2011 goal period. Given the increase in the cost of capital and regulatory capital requirements in 2008 we intend to publish new goals in 2009.

Shareholder returns

Total shareholder return (TSR) is defined as the value created for shareholders through share price appreciation, plus reinvested dividend payments. We compare Barclays performance with a group of international peers and aim for top quartile performance. Return on average shareholders' equity is calculated as profit after tax divided by the average shareholders' equity during the year, which is made up of share capital, retained earnings and other reserves.

These measures indicate the returns shareholders are receiving for their investment in Barclays both in terms of relative share price movements and the business performance. These metrics demonstrate the alignment of Barclays strategy and operations with the interests of shareholders.

Total shareholder return		
2006 2nd quartile	2007 3rd quartile	2008 2nd quartile

Return on average shareholders' equity		
2006	2007	2008
24.7%	20.3%	16.5%

Capital ratios

Capital requirements are part of the regulatory framework governing how banks and depository institutions are managed. Capital ratios express a bank's capital as a percentage of its risk weighted assets. Tier 1 capital is defined by the UK FSA with Equity Tier 1 broadly being tangible shareholders' funds within Tier 1. The 2008 pro-forma ratios reflect the conversion of Mandatorily Convertible Notes and inclusion of all innovative instruments in Tier 1 capital.

The Group's capital management activities seek to maximise shareholders' value by optimising the level and mix of its capital resources.

The Group's capital management objectives are to:

- Maintain sufficient capital resources to meet the minimum regulatory capital requirements set by the UK FSA and the US Federal Reserve Bank's requirements that a financial holding company be 'well capitalised'
- Maintain sufficient capital resources to support the Group's Risk Appetite and economic capital requirements
- Support the Group's credit rating
- Ensure locally regulated subsidiaries can meet their minimum capital requirements
- Allocate capital to businesses to support the Group's strategic objectives, including optimising returns on economic and regulatory capital.

We expect to maintain our Equity Tier 1 and Tier 1 ratios at levels which significantly exceed the current minimum requirements of the UK FSA for the duration of the current period of financial and economic stress.

2006	2007	2008	Pro-forma 2008
Equity Tier 1^a			
5.3%	5.1%	5.8%	6.7%
Tier 1^a			
7.7%	7.6%	8.6%	9.7%

Note

^a Capital ratios for 2008 and 2007 are calculated on a Basel II basis, whilst the 2006 ratios are on a Basel I basis

Adjusted Gross Leverage

Adjusted gross leverage is defined as the multiple of adjusted total tangible assets over total qualifying Tier 1 capital. Adjusted total tangible assets are total assets less derivative counterparty netting, assets under management on the balance sheet, settlement balances, goodwill and intangible assets. Tier 1 capital is defined by the UK FSA. The 2008 Pro forma ratio reflects the conversion of Mandatorily Convertible Notes and inclusion of all innovative instruments in Tier 1 capital.

Barclays believes that there will be more capital and less leverage in the banking system, as a key measure of stability, which is consistent with the views of regulators and investors. Barclays expects adjusted gross leverage to reduce further over time.

2007	2008	Pro-forma 2008
33x	28x	24x

Strategic KPIs Build the best bank in the UK

Definition

UK Retail Banking Customer Satisfaction

The Retail Banking Service Monitor tracks satisfaction amongst Barclays customers. Approximately 13,000 customers a month are researched for this study. The Satisfaction score is measured using the percentage of customers who state they are 'Very' or 'Completely' satisfied with Barclays. We also benchmark our performance in comparison with competitors using syndicated or directly commissioned research.

Why it's important to the business and management

Putting the customer first and improving customer service is fundamental to our goal of being the UK's best bank. Customer satisfaction targets are set at a strategic business unit level and business area action plans are developed through the continuous tracking of customer satisfaction and complaints feedback. Since June 2008 customer satisfaction and advocacy have been on an increasing trend as a result of significant improvements to our service and innovations in our product offerings.

Net new lending in Barclays Commercial Bank

The net new lending percentage represents the increase in our loans and advances to customers during the year.

Building the best bank in the UK means we are there for our customers. We have increased our lending to UK corporate customers even during the current economic conditions.

Year	2006	2007	2008
Net new lending	+8%	+14%	+10%

UK Retail Banking cost:income ratio target

Cost:income ratio is defined as operating expenses compared to total income net of insurance claims.

It is a measure management use to assess the productivity of the business operations. In February 2008 we targeted improving the UK Retail Banking cost:income ratio by a further three percentage points from 57% over the course of the next three years.

Year	2006	2007	2008
Cost:income ratio	58%	57%	56%

Strategic KPIs Accelerate growth of global businesses

Definition

Barclaycard International – number of customers

The total number of customers split between UK and non-UK.

Why it's important to the business and management

Barclaycard is one of Europe's largest multi-branded credit card businesses, with a fast growing business in the United States and South Africa. In 2003 we targeted growing Barclaycard's international operations to the same scale as its UK business over 10 years. This KPI demonstrates how this target is being achieved.

Investment Banking and Investment Management Income

The total income from the businesses which make up Investment Banking and Investment Management; being Barclays Capital, Barclays Global Investors and Barclays Wealth.

The Investment Banking and Investment Management division contains the majority of our global businesses and income is a key indicator of growth in this area. Including net credit market write-downs income in 2008 was £8,399m (2007: £10,332m). Excluding these write-downs income in 2008 was £11,593m (2007: £11,185m).

Year	2006	2007	2008
Income	£9,092m	£10,332m	£8,399m

Strategic KPIs

Develop Retail and Commercial Banking activities in selected countries outside the UK

Definition

Number of distribution outlets outside the UK

Represents total number of branches and sales centres outside the UK.

Why it's important to the business and management

This represents the growth in our footprint around the world, providing a clear indication of the development of our activities outside the UK. The addition of new distribution outlets drives the increase in customer numbers.

Year	2006	2007	2008
Value	1,705	2,349	3,158

Proportion of Global Retail and Commercial Banking international income

Percentage of total Global Retail and Commercial Banking income earned outside the UK.

This demonstrates the successful execution on Barclays strategy of diversifying our business base by geography over time to achieve higher growth.

Strategic KPIs

Enhance operational excellence

Definition

Risk management

Loan loss rate

The loan loss rate represents the impairment charge on loans and advances as a proportion of the balances.

Why it's important to the business and management

The granting of credit is one of Barclays major sources of income and its most significant risk. The loan loss rate is an indicator of the cost of granting credit.

Cost management cost:income ratio by business – productivity benchmarking

Cost:income ratio is defined as operating expenses compared to total income net of insurance claims. This is compared to a peer set relevant for each business.

It is a measure management use to assess the productivity of the business operations. We target a top quartile cost:income ratio of each of our businesses relative to their peers.

^a Peers include related credit card business
^b Absa Group Limited
^c Cost:net income

Sustainability

Definition

Global investment in our communities

Barclays total contribution to supporting the communities where we operate.

Why it's important to the business and management

Investing in the communities in which we operate is an integral part of Barclays sustainability strategy. We are committed to maintaining investment in our communities for the long-term – both in good times and in bad. This metric demonstrates our commitment over time.

Our People

Definition

Number of colleagues involved in fundraising and volunteering initiatives

The total number of Barclays employees taking part in volunteering, giving and fundraising activities with Barclays support.

Why it's important to the business and management

Barclays community investment programme aims to engage and support colleagues around the world to get involved with our main partnerships, as well as the local causes they care about. Harnessing their energy, time and skills delivers real benefit to local communities, to their own personal development and to their engagement with Barclays.

Employee opinion survey for Global Retail and Commercial Banking and Group Centre

A survey of employees, the results of which give demographic and diversity information as well as an indication of employee perceptions in four key areas: Barclays Top Leadership, Business Unit Leadership, Customer Focus and Employee Engagement. The results are analysed to show year on year trends of employee opinion and are benchmarked against other global financial services organisations and high performing organisations.

The results of the survey provide leaders with insight into employee views on key business drivers from which they can establish action plans for improvements based on both strengths and weaknesses identified.

2008 was an extraordinarily difficult year for the financial services industry with the second half in particular seeing a period of exceptional instability. It was a year that saw the rescue of a number of banks around the world and significant action being taken by governments globally to rebuild confidence in the sector including, in the UK, the government taking large shareholdings in two major banks.

Barclays was impacted by the difficult environment – we undertook two significant capital raisings during the year and incurred gross losses from credit market write-downs of approximately £8bn. However, a profit before tax for the year of just over £6bn, whilst benefiting from a number of gains on acquisitions and disposals, remains a resilient performance in such a difficult environment and reflects a continuing focus by all our people on servicing the needs of our customers and clients. We were able to absorb the level of credit market write-downs through the strong income performance of the Group. As a result of raising over £1.3bn in equity and Tier 1 capital in 2008, our capital base has been substantially strengthened and we have over £37bn of equity capital and reserves. This scale of loss absorption capacity, combined with the underlying profitability of the Group, gives us confidence that our capital resources are sufficient, even in these difficult markets. Our liquidity position remains strong.

The share price performance during the year was acutely disappointing. Share prices in the sector as a whole were badly hit during the year by a number of factors, including concerns over the profit outlook given the macroeconomic environment and uncertainty over banks' capital strength. It is of little consolation that in terms of total shareholder return we outperformed the majority of our UK peers and a number of our global competitors. The Board is committed to creating the conditions to allow the share price to recover and to resume dividend payments in the second half of 2009, following the decision not to pay a final dividend for 2008.

The difficult market conditions for bank shares has continued in 2009. We welcomed the announcements made by HM Treasury and the FSA in January designed to help the UK economy through a number of initiatives in the areas of capital ratios, funding and asset protection. Despite these, market confidence remains extremely fragile.

As a Board, we very much regret what has happened to the banking sector in general and to Barclays share price in particular. We fully recognise that banks must review their internal governance systems and remuneration structures to ensure there can be no repeat of the turmoil that has impacted the industry, and the wider economy, over the last 18 months. The Board HR and Remuneration Committee is reviewing compensation policy and structures across the Group to ensure maximum alignment both with the interests of our shareholders and with best practice. The Board is also committed to ensuring that Barclays plays its full part in contributing to the restoration of the health of the global economy and, with that, the reputation of the industry. In particular, the capital position and ongoing profitability of the Group is enabling us to support our customers in the difficult economic environment. For example, our lending to UK consumers and UK commercial clients increased by 16% and 14% respectively in 2008.

Market Environment

The announcement that Lehman Brothers would file for bankruptcy in September was the start of a period of extreme instability in global stock markets and a crisis of confidence in the banking system. Credit market conditions became very difficult and a number of banks around the world required government assistance. In October, the UK authorities decided to take action to stabilise the UK financial services industry. The capital plans and balance sheets of all the UK banks were subject to severe stress tests and additional capital was required to be raised to ensure that their ratios would remain prudent even in the severest downturn. This represented a significant change in the capital framework across the UK banking industry and obliged Barclays to raise capital well beyond the level we had previously agreed with our regulators.

In my speech at the General Meeting to approve the capital raising in November (which is available at www.barclays.com), we also recognised that some of our shareholders were unhappy about some aspects of the November capital raising. This unhappiness is a matter of great regret to us. I set out in my introduction to the Corporate Governance Report on page

“

The Board is committed to creating the conditions to allow the share price to recover and to resume dividend payments in the second half of 2009.

”

157 some further information on the background to the November capital raising, the governance processes surrounding the decisions that were taken and the Board's appreciation of the support received from shareholders in very difficult circumstances. I would like to give my personal assurance that the Board considered the capital raising very carefully – there were 12 meetings of the Board in October and November to discuss the matter, ensuring appropriate corporate governance as we sought to react to the circumstances prevailing at the time. The Board regrets, however, that the capital raising denied Barclays existing shareholders their full rights of pre-emption and that our private shareholders were not able to participate in the raising.

Board Changes

As I stated in my report last year, Sir Michael Rake and Patience Wheatcroft joined the Board on 1st January 2008 and Dr Danie Cronjé retired from the Board at the Annual General Meeting. We announced in January 2009 that Sir Nigel Rudd had advised us that he did not intend seeking re-election at the forthcoming AGM. Sir Nigel has served as a Director for nearly 13 years and Barclays has benefited enormously from his commercial experience and wise counsel. He will be greatly missed. I would also like to pay tribute to Professor Dame Sandra Dawson, who will also be retiring as a Director at the AGM. Sandra has served with distinction as both a Director and member of the Board Audit Committee. Stephen Russell will also retire from the Board in October after nine years excellent service, particularly as Chairman of the Board Audit Committee.

We have also announced the appointment of Simon Fraser as a new non-executive Director. Simon held a number of positions during his career at Fidelity International, including President of Fidelity's European and UK institutional business and Global Chief Investment Officer. He will bring valuable fund management and institutional shareholder experience to the Board.

Maintaining our commitment to sustainability

At no other time in our history have the values of sustainability mattered more to our company and to our stakeholders.

We focus our commitment in this important area on our ability to support our customers well in good times and bad; on our role as an equal opportunity company employing all races, creed, colour and orientation; on our commitment to play our part in managing the impact of climate change; and on our role as a responsible global citizen.

We report on our progress on all these areas within the report (pages 66 to 68) and in our Sustainability Review 2008, which will be published in April 2009.

Key achievements for 2008 included maintaining responsible lending to individuals and businesses, a steady growth in the number of low-income bank accounts in many of our markets including the UK, developing diversity strategies and action plans tailored to local markets across our businesses and maintaining progress towards our goal that the global banking operations of Barclays be carbon neutral by the end of 2009.

There is a universal benefit to be obtained from a return to confidence in the banking system and from the restoration of the reputation of the banking industry in general. I give you my assurance that we at Barclays will do our utmost to play our part in procuring this vital objective.

Group Chief Executive's review

I reported in our interim results that the conditions in the market in the preceding 12 months were as difficult as any that we had experienced in many years. In the six months since, we have seen the bankruptcy of Lehman Brothers, substantial action taken by the UK and other governments, and a progressive deterioration in the consensus expectations for global economic prospects. The environment has been extraordinarily challenging for nearly two years, and remains so.

We have managed Barclays carefully through this period. We have remained solidly profitable. Although the 2008 profit before tax of £6.1bn includes several individually significant and one-off items, our performance during the year has mainly been driven by ongoing business. Where we have had the opportunity to generate non-recurring profits, we have done so, including a gain on the acquisition of Lehman Brothers North American businesses, a gain on the acquisition of the Goldfish credit card business in the UK, gains on selling the UK Closed Life Fund and from the Visa IPO and sale of MasterCard shares. These items, combined with record income generation across the Group, have enabled us to absorb substantial write-downs on our credit market assets and still post substantial profits.

But our shareholders have suffered a lot. Although we cannot control the price at which our shares trade in the market, we greatly regret the fact that the total return on our shares during 2008 has been heavily negative, and we acknowledge with regret, also, our decision not to recommend the payment of a final dividend for 2008, which is one of the consequences of the increased capital requirements introduced by the UK Financial Services Authority in October.

These facts have influenced significantly our compensation decisions in respect of 2008. This has resulted in the incentive payments across Barclays being significantly lower in 2008 than in 2007; in the application of high differentiation in incentive pools, based both on business and individual performance; and in our delivering a significant proportion of compensation for the most senior individuals across Barclays over multiple years. Executive Directors will receive no bonuses for 2008. For 2009 and beyond, we are reviewing our compensation policies and practices to ensure that they evolve appropriately. Our endeavour as we do this is to maximise the alignment between these and the interests of our owners, as well as to ensure that our compensation policies and practices are appropriately benchmarked to changing best practice in the industry.

Our priorities in 2008 were (and remain): **to stay close to customers and clients; to manage our risks; and to progress strategy.**

2008 Priorities

Our approach of staying close to customers and clients is shown in the number of customers we serve in Global Retail and Commercial Banking,

which has increased from 39 million to 48 million; in the increase in our lending volumes, particularly in UK mortgages, where our net lending mortgage market share was 36%, in the Group as a whole where our loans and advances increased 32% to £510bn; and in sharply increased activity levels in Barclays Capital in interest rates, currency products and commodities.

Managing our risks through the unfolding crisis has been a significant focus through the year. In this Annual Report we have set out extensive details on the nature and quality of our loans and advances, as well as further detail on our credit market assets. We have worked hard to reduce these during the year. £9.4bn of our exposures were sold or redeemed^a and, in addition, we have announced a total of £8.1bn in gross write-downs of these assets. Managing these exposures will continue to be a priority in 2009. We are confident of the valuations of these assets at the year end; whilst we expect there will be further charges as we work down these assets, we also expect that gross write-downs in 2009 will be lower than the levels of 2008.

In progressing strategy in 2008, we have announced a number of acquisitions – Lehman Brothers North American businesses, Goldfish in the UK, Expobank in Russia, Akita Bank in Indonesia – and we also launched or expanded banking platforms in Pakistan and India. These steps will, we believe, have a significant collective impact in the future. We have also, of course, raised large amounts of new equity and other capital, increasing our shareholders' equity by almost 50% during the year.

As we look forward to 2009 it is clear that the economic and business environment will remain very difficult, and the quality of our assets and risk management capability will again be tested. The scale of our market presence in the geographies where we do business means that we will not avoid the consequences of severe downturn. Although we have been careful over recent years to avoid inappropriate risk concentration in our major loan books in retail and commercial banking, our plans for 2009 assume that impairment will continue to be at a high level.

2009 Strategic Framework

Our framework for moving the strategy forward in 2009 has the following features:

- **Responsible corporate citizenship.** Governments in the UK and elsewhere have taken significant steps to address the impacts of the financial crisis and recession, and we must work with the authorities and, of course, with our customers, to deal with the crisis in a way which is consistent with our obligations to shareholders.
- We have committed to recommencing **dividend** payments during the second half of 2009. Thereafter, and as previously announced, dividend

Note

^a Includes redemption of £3.1bn leveraged finance exposure in January 2009.

We have committed to lend an additional £1.5bn in 2009 to our SME customers.

£1.5bn

payments will be made on a quarterly basis. We will set out our dividend policy at the Annual General Meeting in April.

- We must ensure that our **capital position** is robust and our **balance sheet** well-managed. We set out within the Financial Review our approach to managing leverage in the balance sheet, and our expectations for capital ratios. For 2009, returns will rank ahead of growth.
- To create good returns at this time, we must preserve **strategic and operational choice**. As conditions remain very difficult in 2009, we expect that there will be considerable value at stake for our shareholders in decisions that we take relating to resource utilisation, capital allocation and risk management. Our objective over time is to ensure that the cost of the capital we raised last November is covered many times over by the benefits of pursuing our strategy.
- We must deliver **solid profitability** notwithstanding the global downturn. Our diversified income streams have served us well in recent years and have enabled us to absorb substantial costs from the financial crisis. We expect them to continue to do so.
- We will seek to manage **the composition of our profits, and capital allocation**, to ensure that we optimise returns from our universal banking business model. What does this mean? It is clear to us that in the future there will be more capital in the banking system, and less leverage, particularly in capital markets businesses. This will be true at Barclays too, and will govern our approach to capital allocation and expected returns. We expect to see balance sheet utilisation by Barclays Capital fall over time, which will help us to deliver strengthening returns. We believe that the businesses that we have built from the integration of Lehman Brothers North American businesses and Barclays Capital will help in this regard, since the capital intensity of the advisory businesses in M&A and of the flow businesses in fixed income, currencies, equities and credit will be lower, once we have managed down our credit market exposures.

Goals

We set out last year our goals for economic profit for 2008 through 2011. Those were based on, amongst other things, the then regulatory capital requirements for the business and the then cost of equity. The regulatory capital requirements were significantly increased last year by the UK Financial Services Authority. The observed cost of equity has also increased. It is right, therefore, that we revisit our goals, to ensure that they are properly aligned with our new return and balance sheet objectives, and with the interests of our owners. We intend to publish revised goals in due course that reflect the changes to the environment in the past two years.

“
Our performance reflects the continuing focus of Barclays employees on delivering high-quality service to clients and customers despite the difficult conditions of the year.
”

Outlook

We expect 2009 to be another challenging year with continuing downturns or recessions in many of the economies in which we are represented. In 2008 our profits were reduced by the impacts of substantial gross credit market losses. In 2009, we expect the impact of such credit market losses to be lower. Whilst we are confident in the relative quality of our major books of assets, we also expect the recessionary environments in the UK, Spain, South Africa and the US to increase the loan loss rates on our loans and advances.

Governments in the UK and elsewhere have taken significant measures to assist borrowers and lenders in response to the emerging recession, including reducing official interest rates. The low interest rate environment will have the impact of substantially reducing the spread generated on our retail and commercial banking deposits, particularly in the UK, but we expect the combined impact of these government measures to be positive for the economy in time.

2009 Trading

Customer and client activity levels were high in the first month of 2009, and we have had a good start to the year. In particular, the operating performance of Barclays Capital, benefiting from the now complete integration of the Lehman Brothers North American businesses, was extremely strong. The trends that lie behind the strong operating performance in Global Retail and Commercial Banking in 2008 were again observable in its performance in January.

Conclusion

I end this review by recording the Board's appreciation of the dedication and hard work of our 150,000 people. We are doing more business with more customers and clients than at any time in our history, and have generated substantial profits. That we have been able to do this reflects the continuing focus of Barclays employees on delivering high-quality service to clients and customers despite the difficult conditions of the year.

Income statement

Barclays delivered profit before tax of £6,077m in 2008, a decline of 14% on 2007. The results included the following significant items:

- gains on acquisitions of £2,406m, including £2,262m gain on acquisition of Lehman Brothers North American businesses
- profit on disposal of Barclays Closed UK Life assurance business of £326m
- gains on Visa IPO and sales of shares in MasterCard of £291m, distributed widely across the Group
- gross credit market losses and impairment of £8,053m, or £4,957m net of related income and hedges of £1,433m and gains on own credit of £1,663m

Profit after tax increased 4% to £5,287m. This reflected an effective tax rate of 13% (2007: 28%) primarily due to the gain on the acquisition of Lehman Brothers North American businesses of £2,262m in part being offset by carried forward US tax losses attributable to Barclays businesses. Earnings per share were 59.3p (2007: 68.9p), a decline of 14% from 2007, reflecting the impact of share issuance during 2008 on the weighted average number of shares in issue.

Income grew 1% to £23,115m. Income in Global Retail and Commercial Banking increased 17% and was particularly strong in businesses outside of the UK to which we have directed significant resource. Income in Investment Banking and Investment Management was down 19%. Barclays Capital was affected by very challenging market conditions in 2008, with income falling by £1,888m (27%) on 2007, reflecting gross losses of £6,290m relating to credit market assets, partially offset by gains of £1,663m on the fair valuation of notes issued by Barclays

Capital due to widening of credit spreads and £1,433m in related income and hedges. Excluding credit market related losses, gains on own credit and related income and hedges, income in Barclays Capital increased 6%.

Impairment charges and other credit provisions of £5,419m increased 94% on the prior year. Impairment charges included £1,763m arising from US sub-prime mortgages and other credit market exposures. Other wholesale impairment charges increased significantly as corporate credit conditions turned sharply worse. In Barclays Capital increased charges also arose in prime services, corporate lending and private equity. In Barclays Commercial Bank, increased impairment charges reflected the UK economy moving into recession. In the UK there was a moderate increase in impairment in UK Retail Banking as a result of book growth and a deteriorating economic environment. UK mortgage impairment charges remained low. There was a lower charge in UK cards as net flows into delinquency and arrears levels reduced. Significant impairment growth in our Global Retail and Commercial Banking businesses outside the UK reflected very strong book growth in recent years, and maturation of those portfolios, together with deteriorating credit conditions and rising delinquency rates in the US, South Africa and Spain.

Operating expenses increased 9% to £14,366m. We continued to invest in our distribution network in the Global Retail and Commercial Banking businesses. Expenses fell in Barclays Capital due to lower performance related costs. Expenses in Barclays Global Investors included selective support of liquidity products of £263m (2007: £80m). Group gains from property disposals were £148m (2007: £267m). Head office reflects £101m due to the cost of the contribution to the UK Financial Services Compensation Scheme. Underlying cost growth was well controlled. The Group cost:income ratio deteriorated by five percentage points to 62%.

Income statement commentary

Net interest income

2008/07

Group net interest income increased 19% (£1,859m) to £11,469m (2007: £9,610m) reflecting balance sheet growth across the Global Retail and Commercial Banking businesses and in particular very strong growth internationally driven by expansion of the distribution network and entrance into new markets. An increase in net interest income was also seen in Barclays Capital due to strong results from global loans and money markets.

Group net interest income includes the impact of structural hedges which function to reduce the impact of the volatility of short-term interest rate movements on equity and customer balances that do not re-price with market rates. The contribution of structural hedges relative to average base rates increased income by £117m (2007: £351m expense), largely due to the effect of the structural hedge on changes in interest rates.

2007/06

Group net interest income increased 5% (£467m) to £9,610m (2006: £9,143m) reflecting balance sheet growth across a number of businesses. The contribution of structural hedges relative to average base rates decreased to £351m expense (2006: £26m income), largely due to the effect of the structural hedge on changes in interest rates. Other interest expense principally includes interest on repurchase agreements and hedging activity.

Business margins

2008/07

UK Retail Banking assets margin increased five basis points to 1.25% (2007: 1.20%) reflecting increased returns from mortgages. The average liabilities margin declined 14 basis points to 2.01% (2007: 2.15%) reflecting the reductions in UK base rates in the second half of 2008.

Barclays Commercial Bank assets margin decreased 25 basis points to 1.55% (2007: 1.80%) due, in part, to a continued focus on lower risk term lending. The liabilities margin declined two basis points to 1.47% (2007: 1.49%) partly reflecting the reductions in UK base rates in the second half of 2008.

Barclaycard assets margin increased 41 basis points to 6.92% (2007: 6.51%) due to a change in the product mix with an increased weighting to card lending, following the decision to stop writing new business in FirstPlus.

GRCB – Western Europe assets margin increased three basis points to 1.16% (2007: 1.13%) reflecting the focus on repricing assets and strong growth in unsecured lending resulting in change in the product mix. The liabilities margin decreased 40 basis points to 1.24% (2007: 1.64%) due to campaigns offering attractive deposit rates resulting in margin compression.

GRCB – Emerging Markets assets margin decreased 167 basis points to 4.95% (2007: 6.62%) reflecting higher funding costs, partially offset by improvement in the product mix. The liabilities margin improved 142 basis points to 2.17% (2007: 0.75%) driven by a change in the product mix and a higher return from funding the assets.

GRCB – Absa assets margin increased nine basis points to 2.79% (2007: 2.70%) as a result of a focus on pricing for risk and a change in the composition of the book, partially offset by the higher cost of wholesale

Average balances	2008 £m	2007 £m	2006 £m
UK Retail Banking assets	90,263	78,502	73,593
UK Retail Banking liabilities	85,892	81,848	76,498

Barclays Wealth liabilities	0.95	1.03	1.10

funding. The liabilities margin decreased 15 basis points to 3.06% (2007: 3.21%) reflecting the emphasis on liquidity and strong growth in lower margin retail deposits.

Barclays Wealth assets margin decreased seven basis points to 1.04% (2007: 1.11%) reflecting changes in the product mix. The liabilities margin reduced by eight basis points to 0.95% (2007: 1.03%) driven by changes in the product mix and compression of margins as interest rates reduced during the second half of the year.

2007/06

UK Retail Banking assets margin decreased 12 basis points to 1.20% (2006: 1.32%) principally due to the increased proportion of mortgages and the contraction in unsecured loans. UK Retail Banking liabilities margin increased 10 basis points to 2.15% (2006: 2.05%) due to pricing initiatives and changes in the product mix.

Barclays Commercial Bank assets margin decreased by 12 basis points to 1.80% (2006: 1.92%) due to changes in the product mix. Barclays Commercial Bank liabilities margin remained broadly stable at 1.49% (2006: 1.46%).

Barclaycard assets margin decreased 54 basis points to 6.51% (2006: 7.05%) due to higher average base rates across core markets and an increased weighting to secured lending.

GRCB – Western Europe assets margin of 1.13% (2006: 1.11%) was broadly stable. The liabilities margin declined 6 basis points to 1.64% (2006: 1.70%) primarily driven by changes in product and country mix.

GRCB – Emerging Markets asset margin declined 184 basis points to 6.62% (2006: 8.46%) reflecting competitive pricing to drive volume growth. The liabilities margin declined 18 basis points to 0.75% (2006: 0.93%) primarily driven by changes in product and country mix.

GRCB – Absa assets margin decreased 11 basis points to 2.70% (2006: 2.81%) due to increased competition, increase in interest rates and changes in the product mix. The liabilities margin increased 34 basis points to 3.21% (2006: 2.87%) driven by a re-pricing of customer deposits and higher interest rates.

Barclays Wealth assets margin increased three basis points to 1.11% (2006: 1.08%) due to changes in the product mix. The liabilities margin decreased seven basis points to 1.03% (2006: 1.10%) due to competitive pricing.

Net fee and commission income

2008/07

Net fee and commission income increased 9% (£699m) to £8,407m (2007: £7,708m). Banking and credit related fees and commissions increased 13% (£845m) to £7,208m (2007: £6,363m), reflecting growth in Barclaycard International, increased fees from advisory and origination activities in Barclays Capital and increased foreign exchange, derivative and debt fees in Barclays Commercial Bank.

2007/06

Net fee and commission income increased 7% (£531m) to £7,708m (2006: £7,177m). Fee and commission income rose 8% (£673m) to £8,678m (2006: £8,005m) reflecting increased management and securities lending fees in Barclays Global Investors, increased client assets and higher transactional income in Barclays Wealth and higher income generated from lending fees in Barclays Commercial Bank. Fee income in Barclays Capital increased primarily due to the acquisition of HomEq.

Income statement commentary

Principal transactions

2008/07

Principal transactions decreased 60% (£2,966m) to £2,009m (2007: £4,975m).

Net trading income decreased 65% (£2,430m) to £1,329m (2007: £3,759m). The majority of the Group's net trading income arises in Barclays Capital. Growth in the Rates related business reflected growth in fixed income, prime services, foreign exchange, commodities and emerging markets. The Credit related business included net losses from credit market dislocation partially offset by the benefits of widening credit spreads on structured notes issued by Barclays Capital.

Net investment income decreased 44% (£536m) to £680m (2007: £1,216m). The cumulative gain from disposal of available for sale assets decreased 62% (£348m) to £212m (2007: £560m) reflecting the lower profits realised on the sale of investments. The £212m gain in 2008 included the £47m gain from sale of shares in MasterCard.

The dividend income increased £170m to £196m (2007: £26m) reflecting the Visa IPO dividend received by GRCB – Western Europe, GRCB – Emerging Markets and Barclaycard in the current year. The GRCB – Absa gain on the Visa IPO of £47m has been recognised in other income.

Net gain from financial instruments designated at fair value decreased 89% (£260m) to £33m (2007: £293m), driven by the continued decrease in value of assets backing customer liabilities in Barclays Life Assurance; and fair value decreases of a number of investments reflecting the current market condition.

Other investment income decreased 29% (£98m) to £239m (2007: £337m) due to a number of non-recurring disposals in the prior year.

2007/06

Principal transactions increased 9% (£399m) to £4,975m (2006: £4,576m).

Net trading income increased 4% (£145m) to £3,759m (2006: £3,614m). The majority of the Group's net trading income arose from Barclays Capital. Growth in the Rates related business reflected very strong performances in fixed income, commodities, foreign exchange, equity and prime services. The Credit related business included net losses from credit market turbulence and the benefits of widening credit spreads on structured notes issued by Barclays Capital.

Net investment income increased 26% (£254m) to £1,216m (2006: £962m). The cumulative gain from disposal of available for sale assets increased 82% (£253m) to £560m (2006: £307m) largely as a result of a number of private equity realisations and divestments. Net income from financial instruments designated at fair value decreased by 34% (£154m) largely due to lower growth in the value of linked insurance assets within Barclays Wealth.

Fair value movements on insurance assets included within net investment income contributed £113m (2006: £205m).

Net premiums from insurance contracts

2008/07

Net premiums from insurance contracts increased 8% (£79m) to £1,090m (2007: £1,011m), primarily due to expansion in GRCB – Western Europe reflecting a full year's impact of a range of insurance products launched in late 2007, partially offset by lower net premiums following the sale of the closed life assurance book.

2007/06

Net premiums from insurance contracts decreased 5% (£49m) to £1,011m (2006: £1,060m), primarily due to lower customer take up of loan protection insurance.

Other income

2008/07

Certain asset management products offered to institutional clients by Barclays Global Investors are recognised as investment contracts. Accordingly, the invested assets and the related liabilities to investors are held at fair value and changes in those fair values are reported within other income. Other income in 2008 includes a £47m gain from the Visa IPO.

2007/06

Certain asset management products offered to institutional clients by Barclays Global Investors are recognised as investment contracts. Accordingly, the invested assets and the related liabilities to investors are held at fair value and changes in those fair values are reported within other income. Other income in 2007 includes a loss on the part disposal of Monument credit card portfolio and gains on reinsurance transactions in 2007 and 2006.

Net claims and benefits incurred on insurance contracts	237	492	575

Net claims and benefits incurred on insurance contracts

2008/07

Net claims and benefits incurred under insurance contracts decreased 52% (£255m) to £237m (2007: £492m), principally due to a decrease in the value of unit linked insurance contracts in Barclays Wealth; explained by falls in equity markets and disposal of closed life business in October 2008. Partially offsetting these trends is the increase in contract liabilities associated with increased net premiums driven by the growth in GRCB – Western Europe.

2007/06

Net claims and benefits incurred under insurance contracts decreased 14% (£83m) to £492m (2006: £575m), principally reflecting lower investment gains attributable to customers in Barclays Wealth.

Impairment charges and other credit provisions

2008/07

Impairment charges in UK Retail Banking increased £43m to £602m (2007: £559m), reflecting growth in the book and deteriorating economic conditions. In UK Home Finance, whilst three month arrears increased from 0.63% to 0.91%, the quality of the book and conservative loan to value ratios meant that the impairment charges and amounts charged off remained low at £24m (2007: £3m release). Impairment charges in Consumer Lending increased 3%, reflecting the current economic environment and loan growth.

The impairment charge in Barclays Commercial Bank increased £122m to £414m (2007: £292m), primarily reflecting higher impairment losses in Larger Business, particularly in the final quarter as the UK corporate credit environment deteriorated.

The impairment charge in Barclaycard increased £270m to £1,097m (2007: £827m), reflecting higher charges in Barclaycard International portfolios, particularly Barclaycard US which was driven by loan growth, rising delinquency due to deteriorating economic conditions and exchange rate movements; and £68m from the inclusion of Goldfish. These factors were partially offset by lower charges in UK Cards and secured consumer lending.

Impairment charges in GRCB – Western Europe increased £220m to £296m (2007: £76m), principally due to deteriorating economic trends and asset growth in Spain, where there were higher charges in the commercial portfolios as a consequence of the slowdown in the property and construction sectors. In addition, higher household indebtedness and rising unemployment has driven up delinquency and charge-offs in the personal sector.

Impairment charges in GRCB – Emerging Markets increased £127m to £166m (2007: £39m), reflecting: weakening credit conditions which adversely impacted delinquency trends in the majority of the retail portfolios; asset growth, particularly in India; and increased wholesale impairment in Africa.

Impairment charges in GRCB – Absa increased £201m to £347m (2007: £146m) as a result of rising delinquency levels in the retail portfolios, which have been impacted by rising interest and inflation rates and increasing consumer indebtedness.

Barclays Capital impairment charges of £2,423m (2007: £846m) included a charge of £1,763m (2007: £782m) against ABS CDO Super Senior and other credit market positions. Further impairment charges of £241m were incurred in respect of available for sale assets and reverse repurchase agreements (2007: nil). Other impairment charges increased £355m to £419m (2007: £64m) and primarily related to charges in the private equity and other loans business.

The impairment charge in Barclays Wealth increased £37m to £44m (2007: £7m) from a very low base. This increase reflected both the substantial increase in the loan book over the last three years and the impact of the current economic environment on client liquidity and collateral values.

The impairment charge in Head office functions and other operations increased £8m to £11m (2007: £3m), mainly reflecting losses on Floating Rate Notes held for hedging purposes. An additional £19m (2007: nil) of impairment charges were incurred on available for sale assets.

Income statement commentary

2007/06

Impairment charges in UK Retail Banking decreased by £76m to £559m (2006: £635m), reflecting lower charges in unsecured Consumer Lending and Local Business driven by improved collection processes, reduced flows into delinquency, lower arrears trends and stable charge-offs. In UK Home Finance, asset quality remained strong and mortgage charges remained negligible. Mortgage delinquencies as a percentage of outstandings remained stable and amounts charged off were low.

The impairment charge in Barclays Commercial Bank increased £39m to £292m (2006: £253m), primarily due to higher impairment charges in Larger Business, partially offset by a lower charge in Medium Business due to a tightening of the lending criteria.

Impairment charges in Barclaycard decreased £226m to £827m (2006: £1,053m), reflecting reduced flows into delinquency, lower levels of arrears and lower charge-offs in UK Cards. Changes were made to impairment methodologies to standardise the approach and in anticipation of Basel II. The net positive impact of these changes in methodology was offset by the increase in impairment charges in Barclaycard International and secured consumer lending.

Impairment charges in GRCB – Western Europe and GRCB – Emerging Markets rose by £47m to £115m (2006: £68m), reflecting very strong balance sheet growth in 2006 and 2007 and the impact of lower releases in 2007. Arrears in some of GRCB – Absa's retail portfolios deteriorated in 2007, driven by interest rate increases in 2006 and 2007 resulting in pressure on collections.

Barclays Capital impairment charges and other credit provisions of £846m included a charge of £782m against ABS CDO Super Senior and other credit market exposures and £58m net of fees relating to drawn leveraged finance positions.

Operating expenses**2008/07**

Operating expenses increased 9% (£1,167m) to £14,366m (2007: £13,199m).

Administrative expenses grew 30% (£1,175m) to £5,153m (2007: £3,978m), reflecting the impact of acquisitions (in particular Lehman Brothers North American businesses and Goldfish), fees associated with Group capital raisings, the cost of the Financial Services Compensation Scheme as well as continued investment in the Global Retail and Commercial Banking distribution network. In addition, Barclays Global Investors' selective support of liquidity products increased to £263m in the year (2007: £80m).

Operating expenses were reduced by gains from the sale of property of £148m (2007: £267m) as the Group continued the sale and leaseback of some of its freehold portfolio, principally in UK Retail Banking, Barclays Commercial Bank and GRCB – Western Europe.

Amortisation of intangible assets increased 56% (£105m) to £291m (2007: £186m), primarily related to intangible assets arising from the acquisition of Lehman Brothers North American businesses.

Goodwill impairment of £111m reflects the full write-down of £74m relating to EquiFirst, a US non-prime mortgage originator and a partial write-down of £37m relating to FirstPlus following its closure to new business in August 2008.

2007/06

Operating expenses grew 4% (£525m) to £13,199m (2006: £12,674m). The increase was driven by growth of 3% (£236m) in staff costs to £8,405m (2006: £8,169m) and lower gains on property disposals.

Administrative expenses remained flat at £3,978m (2006: £3,980m), reflecting good cost control across all businesses.

Operating lease rentals increased 20% (£69m) to £414m (2006: £345m), primarily due to increased property held under operating leases.

Operating expenses	2008 £m	2007 £m	2006 £m
Staff costs	7,779	8,405	8,169
Administrative expenses	5,153	3,978	3,980
Depreciation	630	467	455
Impairment charges/(releases)			
– property and equipment	33	2	14
– intangible assets	(3)	14	7
– goodwill	111	–	–
Operating lease rentals	520	414	345
Gain on property disposals	(148)	(267)	(432)
Amortisation of intangible assets	291	186	136
Operating expenses	14,366	13,199	12,674

Operating expenses were reduced by gains from the sale of property of £267m (2006: £432m) as the Group continued the sale and leaseback of some of its freehold portfolio, principally in UK Retail Banking.

Amortisation of intangible assets increased 37% (£50m) to £186m (2006: £136m), primarily reflecting the amortisation of mortgage servicing rights relating to the acquisition of HomEq in November 2006.

Staff costs

2008/07

Staff costs decreased 7% (£626m) to £7,779m (2007: £8,405m). Salaries and accrued incentive payments fell overall by 10% (£720m) to £6,273m (2007: £6,993m), after absorbing increases of £718m relating to in year hiring and staff from acquisitions. Performance related costs were 48% lower, driven mainly by Barclays Capital.

Defined benefit plans pension costs decreased 41% (£61m) to £89m (2007: £150m). This was due to recognition of actuarial gains, higher expected return on assets and reduction in past service costs partially offset by higher interest costs and reduction in curtailment credit.

2007/06

Staff costs increased 3% (£236m) to £8,405m (2006: £8,169m). Salaries and accrued incentive payments rose 5% (£358m) to £6,993m (2006: £6,635m), reflecting increased permanent and fixed term staff worldwide. Defined benefit plans pension costs decreased 47% (£132m) to £150m (2006: £282m). This was mainly due to lower service costs.

Staff numbers

2008/07

Staff numbers are shown on a full-time equivalent basis. Total Group permanent and fixed-term contract staff comprised 60,700 (2007: 61,900) in the UK and 95,600 (2007: 73,000) internationally.

UK Retail Banking staff numbers decreased 300 to 30,400 (2007: 30,700). Barclays Commercial Bank staff numbers increased 600 to 9,800 (2007: 9,200), reflecting investment in product expertise, sales and risk capability and associated support areas. Barclaycard staff numbers increased 700 to 9,600 (2007: 8,900), primarily due to the transfer of staff into Absacard as a result of the acquisition of a majority stake in the South African Woolworth Financial Services business in October 2008. GRCB – Western Europe staff numbers increased 2,100 to 10,900 (2007: 8,800), reflecting expansion of the retail distribution network. GRCB – Emerging Markets staff numbers increased 8,800 to 22,700 (2007: 13,900), driven by expansion into new markets and continued investment in distribution in existing countries. GRCB – Absa staff numbers increased 1,000 to 36,800 (2007: 35,800), reflecting continued growth in the business and investment in collections capacity.

Barclays Capital staff numbers increased 6,900 to 23,100 (2007: 16,200), due principally to the acquisition of Lehman Brothers North American businesses. Barclays Global Investors staff numbers increased 300 to 3,700 (2007: 3,400). Staff numbers increased primarily in the iShares business due to continued expansion in the global ETF franchise. Barclays Wealth staff numbers increased 1,000 to 7,900 (2007: 6,900), principally due to the acquisition of the Lehman Brothers North American businesses.

2007/06

Total Group permanent and fixed term contract staff comprised 61,900 (2006: 62,400) in the UK and 73,000 (2006: 60,200) internationally.

Staff costs	2008 £m	2007 £m	2006 £m
Salaries and accrued incentive payments	6,273	6,993	6,635

Barclays Wealth	7,900	6,900	6,600
Head office functions and other operations	1,400	1,100	1,200
Total Group permanent and fixed-term contract staff worldwide	156,300	134,900	122,600

Income statement commentary

UK Retail Banking headcount decreased 3,800 to 30,700 (2006: 34,500), due to efficiency initiatives in back-office operations and the transfer of operations personnel to Barclays Commercial Bank. Barclays Commercial Bank headcount increased 1,100 to 9,200 (2006: 8,100) due to the transfer of operations personnel from UK Retail Banking and additional investment in front line staff to drive improved geographical coverage. Barclaycard staff numbers decreased 200 to 8,900 (2006: 9,100), due to efficiency initiatives implemented across the UK operation and the sale of part of the Monument card portfolio, partially offset by an increase in the International cards businesses. GRCB – Western Europe staff numbers increased 2,200 to 8,800 (2006: 6,600) and GRCB – Emerging Markets staff numbers increased 6,300 to 13,900 (2006: 7,600) due to growth in the distribution network. GRCB – Absa staff numbers increased 2,800 to 35,800 (2006: 33,000) reflecting growth in the business and distribution network.

Barclays Capital staff numbers increased 3,000 to 16,200 (2006: 13,200) including 800 from the acquisition of EquiFirst. This reflected further investment in the front office, systems development and control functions to support continued business expansion. The majority of organic growth was in Asia Pacific. Barclays Global Investors staff numbers increased 700 to 3,400 (2006: 2,700). Headcount increased in all geographical regions and across product groups and the support functions, reflecting continued investment to support further growth. Barclays Wealth staff numbers increased 300 to 6,900 (2006: 6,600) principally due to the acquisition of Walbrook and increased client-facing professionals.

Share of post-tax results of associates and joint ventures**2008/07**

The overall share of post-tax results of associates and joint ventures decreased £28m to £14m (2007: £42m). The share of results from associates decreased £11m mainly due to reduced contribution from private equity associates. The share of results from joint ventures decreased £17m mainly due to reduced contribution from Barclays Capital joint ventures.

2007/06

The overall share of post-tax results of associates and joint ventures decreased £4m to £42m (2006: £46m). The share of results from associates decreased £20m mainly due to the sale of FirstCaribbean International Bank (2006: £41m) at the end of 2006, partially offset by an increased contribution from private equity associates. The share of results from joint ventures increased by £16m mainly due to the contribution from private equity entities.

Profit on disposal of subsidiaries, associates and joint ventures**2008/07**

On 31st October 2008 Barclays completed the sale of Barclays Life Assurance Company Ltd to Swiss Reinsurance Company for a net consideration of £729m leading to a net profit on disposal of £326m.

2007/06

The profit on disposal in 2007 related mainly to the disposal of the Group's shareholdings in Gabetti Property Solutions (£8m) and Intelnet Global Services (£13m).

Gains on acquisitions

2008/07

The gains on acquisitions in 2008 relate to the acquisition of Lehman Brothers North American businesses (£2,262m) on 22nd September 2008, Goldfish credit card UK business (£92m) on 31st March 2008 and Macquarie Bank Limited Italian residential mortgage business (£52m) on 6th November 2008.

Tax

The overall tax charge is explained in the table below.

2008/07

The effective rate of tax for 2008, based on profit before tax, was 13% (2007: 28%). The effective tax rate differs from the 2007 effective rate and the UK corporation tax rate of 28.5% principally due to the Lehman Brothers North American businesses acquisition. Under IFRS the gain on acquisition of £2,262m is calculated net of deferred tax liabilities included in the acquisition balance sheet and is thus not subject to further tax in calculating the tax charge for the year. Furthermore, Barclays has tax losses previously unrecognised as a deferred tax asset but capable of sheltering part of this deferred tax liability. This gives rise to a tax benefit of £492m which, in accordance with IAS 12, is included as a credit within the tax charge for the year. The effective rate has been adversely impacted by the effect of the fall in the Barclays share price on the deferred tax asset recognised on share awards. In common with prior years there have been offsetting adjustments relating to different overseas tax rates, disallowable expenditure and non-taxable gains and income.

Gains on acquisitions			
	2008 £m	2007 £m	2006 £m
Gains on acquisitions	2,406	–	–
Tax			
	2008 £m	2007 £m	2006 £m
Profit before tax	6,077	7,076	7,136
Tax charge at average UK corporation tax rate of 28.5% (2007: 30%, 2006: 30%)	1,732	2,123	2,141
Prior year adjustments	(176)	(37)	24
Differing overseas tax rates	215	(77)	(17)
Non-taxable gains and income (including amounts offset by unrecognised tax losses)	(833)	(136)	(393)
Share-based payments	229	72	27
Deferred tax assets not previously recognised	(514)	(158)	(4)
Change in tax rates	(1)	24	4
Other non-allowable expenses	138	170	159
Overall tax charge	790	1,981	1,941
Effective tax rate	13%	28%	27%

2007/06

The tax charge for the period was based on a UK corporation tax rate of 30% (2006: 30%). The effective rate of tax for 2007, based on profit before tax, was 28% (2006: 27%). The effective tax rate differed from 30% as it took account of the different tax rates applied to profits earned outside the UK, non-taxable gains and income and adjustments to prior year tax provisions. The forthcoming change in the UK rate of corporation tax from 30% to 28% on 1st April 2008 led to an additional tax charge in 2007 as a result of its effect on the Group's net deferred tax asset. The effective tax rate for 2007 was higher than the 2006 rate, principally because there was a higher level of profit on disposals of subsidiaries, associates and joint ventures offset by losses or exemptions in 2006.

Economic profit

Economic profit comprises:

- Profit after tax and minority interests; less
- Capital charge (average shareholders' equity and goodwill excluding minority interests multiplied by the Group cost of capital).

The Group cost of capital has been applied at a uniform rate of 10.5%^a. The costs of servicing preference shares are included in minority interests, so preference shares are excluded from average shareholders' equity for economic profit purposes.

Reconciliation of economic profit			
	2008 £m	2007 £m	2006 £m
Profit attributable to equity holders of the parent	4,382	4,417	4,571
Addback of amortisation charged on acquired intangible assets ^b	254	137	83
Profit for economic profit purposes	4,636	4,554	4,654
Average shareholders' equity for economic profit purposes ^{c,d} (rounded to nearest £50m)	27,400	23,700	20,500
Post-tax cost of equity	10.5%	9.5%	9.5%
Capital charge ^a	(2,876)	(2,264)	(1,950)
Economic profit	1,760	2,290	2,704

Notes

- ^a The Group's cost of capital changed from 1st January 2008 to 10.5% (2007: 9.5%).
^b Amortisation charged for purchased intangibles, adjusted for tax and minority interests.
^c Average ordinary shareholders' equity for Group economic profit calculation is the sum of adjusted equity and reserves plus goodwill and intangible assets arising on acquisition, but excludes preference shares.
^d Averages for the period will not correspond exactly to period end balances disclosed in the balance sheet. Numbers are rounded to the nearest £50m for presentation purposes only.

Consolidated balance sheet

The financial information above is extracted from the published accounts for the last three years. This information should be read together with, and is qualified by reference to, the accounts and Notes included in this report.

Notes

^a Does not reflect the application of IAS 32, IAS 39 and IFRS 4 which became effective from 1st January 2005.

^b Risk weighted assets and capital ratios for 2006, 2005 and 2004 are calculated on a Basel I basis. Risk weighted assets and capital ratios for 2008 and 2007 are calculated on a Basel II basis. Capital ratios for 2004 are based on UK GAAP and have not been restated as these remain as reported to the Financial Services Authority (FSA). As at 1st January 2005 the Tier 1 ratio was 7.1% and the risk asset ratio was 11.8% reflecting the impact of IFRS including the adoption of IAS 32, IAS 39 and IFRS 4.

Balance sheet

Total assets increased £826bn to £2,053bn in 2008. Of this increase, £737bn was attributable to an increase in derivative assets and £124bn was attributable to increased loans and advances. All other assets declined by £35bn.

Shareholders' equity

Shareholders' equity, excluding minority interests increased, nearly 57% from £23bn at the end of 2007 to £37bn at the end of 2008. The main drivers for this were: equity issuances in July and September of £5.0bn; equity impact of issuing Mandatorily Convertible Notes and Warrants of £4.4bn; and after-tax profits of £5.3bn. Other reserves increased £1.6bn and we paid dividends of £2.3bn.

Capital management

At 31st December 2008, on a Basel II basis the equity Tier 1 ratio was 6.7% and the Tier 1 ratio was 9.7%, both stated on a pro forma basis to reflect conversion into ordinary shares of the Mandatorily Convertible Notes and inclusion of all innovative Tier 1 capital. Capital ratios reflect a 22% increase in risk weighted assets to £433bn during the year. This was driven by the combined impacts on risk weighted assets of the weakening of Sterling and the pro-cyclical effects of the International Basel Accord as well as lending growth in 2008. The capital ratios reflect this risk weighted asset growth and benefited from the significant increases in our capital over the course of 2008. The pro forma ratios significantly exceed the minimum levels established by the UK Financial Services Authority.

On 19th January 2009 the UK government announced, amongst other measures, an asset protection scheme under which banks may insure certain assets on their balance sheet. We are working with the Tripartite Authorities (Her Majesty's Treasury, Bank of England and the

UK Financial Services Authority) to determine the terms on which, and the extent to which, we would wish to participate in the scheme. The procuring of such insurance could have the effect of reducing risk weighted assets. The UK Financial Services Authority also announced on 19th January 2009 a programme of work to reduce significantly the requirement for additional capital raising from the pro-cyclical effects of the International Basel Accord.

We expect a single digit percentage rate of risk weighted asset growth in 2009.

We expect to maintain the equity Tier 1 ratio and Tier 1 ratio at levels which significantly exceed the minimum requirements of the UK Financial Services Authority for the duration of the current period of financial and economic stress.

Foreign Currency Translation

Assets and risk weighted assets were affected by the decline in value of Sterling relative to other currencies during 2008, particularly in the last two months of the year. Over the course of the year, Sterling depreciated by 37% relative to the US Dollar and 31% relative to the Euro. We estimate that currency movements contributed £60bn to risk weighted assets.

Our hedging strategy in respect of net investments in foreign currencies is designed to mitigate against the impact of such movements on our capital ratios. In this regard, equity and Tier 1 capital ratios are hedged to approximately 75%, 30% and 100% of the movements in US Dollar, Euro and South African Rand respectively against Sterling.

The currency translation reserve increased by £3.1bn year on year. This reflected foreign exchange movements in foreign currency net investments which are largely economically hedged through preference share capital (denominated in US Dollars and Euros) that is not revalued for accounting purposes.

Balance sheet commentary

Total assets and risk weighted assets^a

2008/07

Total assets increased 67% to £2,053.0bn (2007: £1,227.4bn).

Risk weighted assets increased 22% to £433.3bn (2007: £353.9bn).

UK Retail Banking total assets increased 15% to £101.4bn (31st December 2007: £88.5bn) driven by growth in mortgage balances. Risk weighted assets decreased 3% to £30.5bn (31st December 2007: £31.5bn) as lending growth mainly in high quality, low risk mortgages was more than offset in capital terms by active risk management.

Barclays Commercial Bank total assets grew 13% to £84.0bn (31st December 2007: £74.6bn) driven by higher loans and advances. Risk weighted assets increased 11% to £63.1bn (31st December 2007: £57.0bn). This was slightly lower than asset growth, reflecting a relative increase in lower risk portfolios.

Barclaycard total assets increased 40% to £30.9bn (31st December 2007: £22.1bn) reflecting increases in International assets, the acquisition of Goldfish and the appreciation of the Euro and US Dollar against Sterling. Risk weighted assets increased 35% to £27.3bn (31st December 2007: £20.2bn), driven by acquisitions, the redemption of securitisation deals and exposure growth predominantly in the US.

GRCB – Western Europe total assets grew 48% to £64.7bn (31st December 2007: £43.7bn) reflecting growth in retail mortgages, unsecured lending, commercial lending and a 31% appreciation over the year in the value of the Euro against Sterling. Risk weighted assets increased 46% to £36.5bn (31st December 2007: £25.0bn), primarily reflecting underlying lending growth and the appreciation of the Euro.

GRCB – Emerging Markets total assets grew 60% to £14.7bn (31st December 2007: £9.2bn) reflecting increases in retail and commercial lending combined with the impact of Sterling depreciation. Risk weighted assets increased 44% to £15.1bn (31st December 2007: £10.5bn), reflecting portfolio growth.

GRCB – Absa total assets increased 11% to £40.4bn (31st December 2007: £36.4bn) reflecting broad based asset growth. Risk weighted assets increased 6% to £18.8bn (31st December 2007: £17.8bn), reflecting balance sheet growth.

Barclays Capital total assets increased 94% (£789.2bn) to £1,629.1bn (31st December 2007: £839.9bn) due to an increase in derivative assets of £736.7bn, predominantly driven by significant volatility and movements in yield curves during the year, together with a substantial depreciation in Sterling against most major currencies. Total assets excluding derivatives increased by 9% in Sterling. On a constant currency basis, total assets excluding derivatives decreased by approximately 15%. Risk weighted assets increased 28% to £227.4bn (31st December 2007: £178.2bn). This was driven by the depreciation in Sterling against the US Dollar and Euro, and an increase in market volatility.

Barclays Global Investors total assets decreased 20% to £71.3bn (31st December 2007: £89.2bn), mainly attributable to adverse market movements in certain asset management products recognised as investment contracts. Risk weighted assets decreased 11% to £3.9bn (31st December 2007: £4.4bn) mainly attributed to changes in the asset class mix, partially offset by the weakening of Sterling against other currencies.

Barclays Wealth total assets decreased 27% to £13.3bn (31st December 2007: £18.2bn) reflecting the sale of the closed life assurance business partially offset by strong growth in lending to high net worth and intermediary clients. Risk weighted assets increased 26% to £10.3bn (31st December 2007: £8.2bn) reflecting strong growth in lending.

Head office functions and other operations total assets decreased 46% to £3.1bn (31st December 2007: £5.7bn). Risk weighted assets decreased 64% to £0.4bn (31st December 2007: £1.1bn). The decrease in the year was mainly attributable to the increased netting of Group deferred tax assets and liabilities.

Notes

^a The 2008/07 commentary on risk weighted assets is on a Basel II basis. The 2007/06 commentary is on a Basel I basis.

^b Under the Group's securitisation programme, certain portfolios subject to securitisation or similar risk transfer transaction are adjusted in calculating the Group's risk weighted assets. Previously, for pre-2008 transactions, regulatory capital adjustments were allocated to the business in proportion to their RWAs. From 1st January 2008, the regulatory capital adjustments for all transactions are allocated to the business undertaking the securitisation unless the transaction has been undertaken for the benefit of a cluster of businesses, in which case the regulatory capital adjustments are shared.

2007/06

Total assets increased 23% to £1,227.4bn (2006: £996.8bn). Risk weighted assets increased 19% to £353.5bn (2006: £297.8bn). Loans and advances to customers that have been securitised increased £4.3bn to £28.7bn (2006: £24.4bn).

UK Retail Banking total assets increased 8% to £88.5bn (2006: £81.7bn). This was mainly attributable to growth in mortgage balances. Risk weighted assets increased by 7% to £46.1bn (2006: £43.0bn) with growth in mortgages partially offset by an increase in securitised balances and other reductions.

Barclays Commercial Bank total assets grew 13% to £74.6bn (2006: £66.2bn) driven by good growth across lending products. Risk weighted assets increased 8% to £54.3bn (2006: £50.3bn), reflecting asset growth partially offset by increased regulatory netting and an increase in securitised balances.

Barclaycard total assets increased 11% to £22.1bn (2006: £20.0bn). Risk weighted assets increased 17% to £19.7bn (2006: £16.9bn), primarily reflecting the increase in total assets, redemption of securitisation transactions, partially offset by changes to the treatment of regulatory associates and the sale of part of the Monument card portfolio.

GRCB – Western Europe total assets grew 31% to £43.7bn (2006: £33.5bn). This growth was mainly driven by increases in retail mortgages and unsecured lending. Risk weighted assets increased 39% to £24.5bn (2006: £17.6bn), reflecting asset growth.

GRCB – Emerging Markets total assets grew by 76% to £9.2bn (2006: £5.2bn). This growth was driven by increases in unsecured lending. Risk weighted assets increased 86% to £6.1bn (2006: £3.3bn), reflecting asset growth.

GRCB – Absa total assets increased 23% to £36.4bn (2006: £29.6bn), primarily driven by increases in mortgages, credit cards and commercial property finance. Risk weighted assets increased 13% to £22.4bn (2006: £19.8bn), reflecting balance sheet growth.

Barclays Capital total assets rose 28% to £839.9bn (2006: £657.9bn). Derivative assets increased £109.7bn primarily due to movements across a range of market indices. This was accompanied by a corresponding increase in derivative liabilities. The increase in non-derivative assets reflects an expansion of the business across a number of asset classes, combined with an increase in drawn leveraged loan positions and mortgage-related assets. Risk weighted assets increased 23% to £169.1bn (2006: £137.6bn) reflecting growth in fixed income, equities and credit derivatives.

Barclays Global Investors total assets increased 11% to £89.2bn (2006: £80.5bn), mainly attributable to growth in certain asset management products recognised as investment contracts. The majority of total assets relates to asset management products with equal and offsetting balances reflected within liabilities to customers. Risk weighted assets increased 45% to £2.0bn (2006: £1.4bn) mainly attributable to overall growth in the balance sheet and the mix of securities lending activity.

Barclays Wealth total assets increased 21% to £18.2bn (2006: £15.0bn) reflecting strong growth in lending to high net worth, affluent and intermediary clients. Risk weighted assets increased 27% to £7.7bn (2006: £6.1bn) reflecting the increase in lending.

Head office functions and other operations total assets decreased 20% to £5.7bn (2006: £7.1bn). Risk weighted assets decreased 15% to £1.6bn (2006: £1.9bn).

Adjusted gross leverage

The adjusted gross leverage ratio is defined as the multiple of adjusted total tangible assets over total qualifying Tier 1 capital.

Volatility in reference rates and yield curves used for pricing have led to significantly higher values for derivative assets and liabilities. Limited netting is permitted under IFRS, even for receivables and payables with the same counterparty where there are contractually agreed netting arrangements. Derivative assets and liabilities would be £91.7bn (2007: £21.5bn) lower than reported under IFRS if netting were permitted for assets and liabilities with the same counterparty or for which we hold cash collateral.

Assets and liabilities also include amounts held under investment contracts with third parties of a further £69bn as at 31st December 2008 (2007: £93bn). These constitute asset management products offered to institutional pension funds which are required to be recognised as financial instruments. Changes in value in these assets are entirely to the account of the beneficial owner of the asset.

Excluding these items, settlement balances, goodwill and intangible assets, our adjusted total tangible assets were £1,026bn at 31st December 2008 (2007: £888bn). On this basis we define adjusted gross leverage, being the multiple of adjusted total tangible assets over total qualifying Tier 1 capital. At 31st December 2008 adjusted gross leverage was 28x (2007: 33x).

On a pro forma basis, reflecting the conversion of Mandatorily Convertible Notes and inclusion of all innovative instruments in Tier 1 capital, our adjusted gross leverage would be 24x. We expect adjusted gross leverage to improve further over time.

Adjusted gross leverage

Balance sheet commentary

Total shareholders' equity**2008/07**

Total shareholders' equity increased £14,935m to £47,411m (2007: £32,476m).

Called up share capital comprises 8,372 million ordinary shares of 25p each (2007: 6,600 million ordinary shares of 25p each and 1 million staff shares of £1 each).

Retained earnings increased £3,238m to £24,208m (2007: £20,970m). Profit attributable to the equity holders of the parent of £4,382m and the proceeds of capital raising of £1,410m were partially offset by dividends paid to shareholders of £2,344m. Other equity of £3,652m represents the issue of Mandatorily Convertible Notes, which will convert into ordinary shares by June 2009.

Movements in other reserves, except the capital redemption reserve, reflect the relevant amounts recorded in the consolidated statement of recognised income and expense on page 206.

Minority interests increased £1,608m to £10,793m (2007: £9,185m). The increase primarily reflects a preference share issuance by Barclays Bank PLC of £1,345m.

The Group's authority to buy-back equity shares was renewed at the 2008 AGM.

2007/06

Total shareholders' equity increased £5,086m to £32,476m (2006: £27,390m).

Called up share capital comprises 6,600 million (2006: 6,535 million) ordinary shares of 25p each and 1 million (2006: 1 million) staff shares of £1 each. Called up share capital increased by £17m representing the nominal value of shares issued to Temasek Holdings, China Development Bank (CDB) and employees under share option plans largely offset by a reduction in nominal value arising from share buy-backs. Share premium

reduced by £5,762m; the reclassification of £7,223m to retained earnings resulting from the High Court approved cancellation of share premium was partly offset by additional premium arising on the issuance to CDB and on employee options. The capital redemption reserve increased by £75m representing the nominal value of the share buy-backs.

Retained earnings increased by £8,801m. Increases primarily arose from profit attributable to equity holders of the parent of £4,417m, the reclassification of share premium of £7,223m and the proceeds of the Temasek issuance in excess of nominal value of £941m. Reductions primarily arose from external dividends paid of £2,079m and the total cost of share repurchases of £1,802m.

Movements in other reserves, except the capital redemption reserve, reflect the relevant amounts recorded in the consolidated statement of recognised income and expense on page 206.

Minority interests increased £1,594m to £9,185m (2006: £7,591m). The increase was primarily driven by preference share issuances of £1,322m and an increase in the minority interest in Absa of £225m.

The Group's authority to buy-back equity shares was renewed at the 2007 AGM.

Barclays Bank PLC

Preference shares issued by Barclays Bank PLC are included within share capital and share premium in the Barclays Bank PLC Group but represent minority interests in the Barclays PLC Group. Certain issuances of reserve capital instruments and capital notes by Barclays Bank PLC are included within other shareholders' equity in the Barclays Bank PLC Group but represent minority interests in Barclays PLC Group. The Mandatorily Convertible Notes issued pursuant to the equity issuances by Barclays PLC represent financial liabilities in the financial statements of Barclays Bank PLC and have not been included in shareholders' equity.

Capital resources

Tier 1 capital increased by £10.5bn during the year, driven by issues of ordinary shares (£5.2bn), other capital issuances (£4.3bn), retained profits (£2.0bn) and exchange rate movements (£3.2bn). These movements were partially offset by an increase in intangible assets (£1.3bn), innovative Tier 1 capital in excess of regulatory limits being reclassified as Tier 2 capital (£1.3bn) and the reversal of gains on own credit, net of tax (£1.2bn).

Tier 2 capital increased by £8.5bn due to issuance of loan capital (£3.6bn) net of redemptions (£1.1bn), inclusion of innovative capital in excess of the Tier 1 limits (£1.3bn), increases in collective impairment (£1.2bn) and exchange rate movements (£3.9bn).

The Mandatorily Convertible Notes (MCNs) issued during the year (£4.1bn) will qualify as equity capital from the date of their conversion, on or before 30th June 2009.

All capital issuance referred to above is stated gross of issue costs.

Basel I transitional floor

Barclays commenced calculating capital requirements under the Basel II capital framework from 1st January 2008. The Group manages its businesses and reports capital requirements on a Basel II basis. During the transition period for the adoption of Basel II, banks' capital requirements may not fall below a transitional floor. In 2008 this floor was 90% of adjusted Basel I capital requirements. As at 31st December 2008, the Group had additional capital requirements under the transitional floor rules of £1.5bn. The Group's total capital resources of £58.7bn exceeded its capital requirements taking into account the transitional floor by £22.5bn. On 1st January 2009, the transitional floor reduced to 80% of adjusted Basel I capital requirements and there were no additional capital requirements resulting from its application.

Other securities – held for trading	179,221	n/a	189,085	n/a	172,124	n/a

Investment debt securities include government securities held as part of the Group's treasury management portfolio for asset and liability, liquidity and regulatory purposes and are for use on a continuing basis in the activities of the Group. In addition, the Group holds as investments listed and unlisted corporate securities.

Bank and building society certificates of deposit are freely negotiable and have original maturities of up to five years, but are typically held for shorter periods.

In addition to UK government securities shown above, at 31st December 2008, 2007 and 2006, the Group held the following government securities which exceeded 10% of shareholders' equity.

Government securities

	2008	2007	2006
	Book value £m	Book value £m	Book value £m
United States	17,165	15,156	18,343
Japan	9,092	9,124	15,505
Germany	5,832	5,136	4,741
France	4,091	3,538	4,336
Italy	6,091	5,090	3,419
Spain	3,647	3,674	2,859

Maturities and yield of available for sale debt securities

	Maturing within one year		Maturing after one but within five years		Maturing after five but within ten years		Maturing after ten years		Total	
	Amount £m	Yield %	Amount £m	Yield %	Amount £m	Yield %	Amount £m	Yield %	Amount £m	Yield %
Government	3,096	6.0	5,410	5.1	1,694	1.1	2,493	0.9	12,693	4.0
Other public bodies	832	1.9	1,526	0.9	1	–	14	4.7	2,373	1.3
Other issuers	21,749	4.3	9,692	3.8	7,702	4.4	4,622	5.7	43,765	4.3
Total book value	25,677	4.4	16,628	3.9	9,397	3.8	7,129	4.0	58,831	4.1

The yield for each range of maturities is calculated by dividing the annualised interest income prevailing at 31st December 2008 by the fair value of securities held at that date.

^a Average balances are based upon daily averages for most UK banking operations and monthly averages elsewhere.

Changes in net interest income – volume and rate analysis

The following tables allocate changes in net interest income between changes in volume and changes in interest rates for the last two years. Volume and rate variances have been calculated on the movement in the

average balances and the change in the interest rates on average interest earning assets and average interest bearing liabilities. Where variances have arisen from changes in both volumes and interest rates, these have been allocated proportionately between the two.

In the ordinary course of business and primarily to facilitate client transactions, the Group enters into transactions which may involve the use of off-balance sheet arrangements and special purpose entities (SPEs). These arrangements include the provision of guarantees, loan commitments, retained interests in assets which have been transferred to an unconsolidated SPE or obligations arising from the Group's involvements with such SPEs.

Guarantees

The Group issues guarantees on behalf of its customers. In the majority of cases, the Group will hold collateral against the exposure, have a right of recourse to the customer or both. In addition, the Group issues guarantees on its own behalf. The main types of guarantees provided are: financial guarantees given to banks and financial institutions on behalf of customers to secure loans; overdrafts; and other banking facilities, including stock borrowing indemnities and standby letters of credit. Other guarantees provided include performance guarantees, advance payment guarantees, tender guarantees, guarantees to Her Majesty's Revenue and Customs and retention guarantees. The nominal principal amount of contingent liabilities with off-balance sheet risk is set out in Note 34 and in the table on page 33.

Loan commitments

The Group enters into commitments to lend to its customers subject to certain conditions. Such loan commitments are made either for a fixed period or are cancellable by the Group subject to notice conditions. Information on loan commitments and similar facilities is set out in Note 34 and in the table on page 33.

Special purpose entities

Transactions entered into by the Group may involve the use of SPEs. SPEs are entities that are created to accomplish a narrow and well defined objective. There are often specific restrictions or limits around their on-going activities.

Transactions with SPEs take a number of forms, including:

- The provision of financing to fund asset purchases, or commitments to provide finance for future purchases.
- Derivative transactions to provide investors in the SPE with a specified exposure.
- The provision of liquidity or backstop facilities which may be drawn upon if the SPE experiences future funding difficulties.
- Direct investment in the notes issued by SPEs.

Depending on the nature of the Group's resulting exposure, it may consolidate the SPE on to the Group's balance sheet. The consolidation of SPEs is considered at inception, based on the arrangements in place and the assessed risk exposures at that time. In accordance with IFRS, SPEs are consolidated when the substance of the relationship between the Group and the entity indicates control. Potential indicators of control include, amongst others, an assessment of the Group's exposure to the risks and benefits of the SPE. The initial consolidation analysis is revisited at a later date if:

- (i) the Group acquires additional interests in the entity;
- (ii) the contractual arrangements of the entity are amended such that the relative exposures to risks and rewards change; or if

- (iii) the Group acquires control over the main operating and financial decisions of the entity.

A number of the Group's transactions have recourse only to the assets of unconsolidated SPEs. Typically, the majority of the exposure to these assets is borne by third parties and the Group's risk is mitigated through over-collateralisation, unwind features and other protective measures. The Group's involvement with unconsolidated third party conduits, collateralised debt obligations and structured investment vehicles is described further below.

Collateralised debt obligations (CDOs)

The Group has structured and underwritten CDOs. At inception, the Group's exposure principally takes the form of a liquidity facility provided to support future funding difficulties or cash shortfalls in the vehicles. If required by the vehicle, the facility is drawn with the amount advanced included within loans and advances in the balance sheet. Upon an event of default or other triggering event, the Group may acquire control of a CDO and, therefore, be required to fully consolidate the vehicle for accounting purposes. The potential for transactions to hit default triggers before the end of 2009 has been assessed and is included in the determination of £1,763m impairment charges and other credit provisions in relation to ABS CDO Super Senior and other credit market exposures for the year ended 31 st December 2008.

The Group's exposure to ABS CDO Super Senior positions before hedging was £3,104m as at 31 st December 2008. This represents the Group's exposure to High Grade CDOs, stated net of write-downs and charges. These facilities are fully drawn and included within loans and advances on the balance sheet. The undrawn mezzanine facilities that were in place as at 31 st December 2007 relate to CDOs that have been consolidated during the period.

Collateral

The collateral underlying unconsolidated CDOs comprised 78% residential mortgage backed securities, 3% non-residential asset backed securities and 19% in other categories (a proportion of which will be backed by residential mortgage collateral).

The remaining Weighted Average Life (WAL) of all collateral is 5.1 years. The combined Net Asset Value (NAV) for all of the CDOs was £2.2bn below the nominal amount, equivalent to an aggregate 41.3% decline in value on average for all investors.

Funding

The CDOs were funded with senior unrated notes and rated notes up to AAA. The capital structure senior to the AAA notes on cash CDOs was supported by a liquidity facility provided by the Group. The senior portion covered by liquidity facilities is on average 85% of the capital structure.

The initial WAL of the notes in issue averaged 6.7 years. The full contractual maturity is 38 years.

Interests in third party CDOs

The Group has purchased securities in and entered into derivative instruments with third party CDOs. These interests are held as trading assets or liabilities on the Group's balance sheet and measured at fair value. The Group has not provided liquidity facilities or similar agreements to third party CDOs.

Additional financial disclosure

Off-balance sheet arrangements

Structured investment vehicles (SIVs)

The Group has not structured or managed SIVs. Group exposure to third party SIVs comprised:

- £41m of senior liquidity facilities.
- Derivative exposures included on the balance sheet at their net fair value of £273m.
- Bonds issued by the SIVs included within trading portfolio assets at their fair value of £11m.

SIV-Lites

The Group has exposure to two SIV-Lite transactions. The Group is not involved in their ongoing management. Exposures have increased by £531m relating to a SIV-Lite which had previously been hedged with Lehman Brothers. Following the Lehman Brothers bankruptcy this facility was reflected as a new exposure to the underlying assets. The other SIV-Lite of £107m represents drawn liquidity facilities supporting a CP programme.

During 2008 exposure to a third SIV-Lite through bond holdings was written down to zero.

Commercial paper and medium-term note conduits

The Group provided £22bn in undrawn backstop liquidity facilities to its own sponsored CP conduits. The Group fully consolidates these entities such that the underlying assets are reflected on the Group balance sheet.

These consolidated entities in turn provide facilities of £899m to third party conduits containing prime UK buy-to-let RMBS. As at 31st December 2008, the entire facility had been drawn and is included in available for sale financial investments.

The Group provided backstop facilities to support the paper issued by four third party conduits. These facilities totalled £866m, with underlying collateral comprising 100% auto loans. Drawings on these facilities were £25m as at 31st December 2008 and are included within loans and advances to customers.

The Group provided backstop facilities to six third party SPEs that fund themselves with medium-term notes. These notes are sold to investors as a series of 12 month securities and remarketed to investors annually. If investors decline to renew their holdings at a price below a pre-agreed spread, the backstop facility requires the Group to purchase the outstanding notes at scheduled maturity. The Group has provided facilities of £2.6bn to SPEs holding prime UK and Australian owner-occupied Residential Mortgage Back Securities (RMBS) assets. As at the balance sheet date these facilities had been drawn and were included in loans and advances.

Asset securitisations

The Group has assisted companies with the formation of asset securitisations, some of which are effected through the use of SPEs. These entities have minimal equity and rely on funding in the form of notes to purchase the assets for securitisation. As these SPEs are created for other companies, the Group does not usually control these entities and therefore does not consolidate them. The Group may provide financing in the form of senior notes or junior notes and may also provide derivatives to the SPE. These transactions are included on the balance sheet.

The Group has used SPEs to securitise part of its originated and purchased retail and commercial lending portfolios and credit card receivables. These SPEs are usually consolidated and de-recognition only occurs when the Group transfers its contractual right to receive cash flows from the financial assets, or retains the contractual rights to receive the cash flows, but assumes a contractual obligation to pay the cash flows to another party without material delay or reinvestment, and also transfers substantially all the risks and rewards of ownership, including credit risk, prepayment risk and interest rate risk. The carrying amount of securitised assets together with the associated liabilities are set out in Note 29.

Client intermediation

The Group has structured transactions as a financial intermediary to meet investor and client needs. These transactions involve entities structured by either the Group or the client and they are used to modify cash flows of third party assets to create investments with specific risk or return profiles or to assist clients in the efficient management of other risks. Such transactions will typically result in a derivative being shown on the balance sheet, representing the Group's exposure to the relevant asset.

The Group also invests in lessor entities specifically to acquire assets for leasing. Client intermediation also includes arrangements to fund the purchase or construction of specific assets (most common in the property industry).

Fund management

The Group provides asset management services to a large number of investment entities on an arm's length basis and at market terms and prices. The majority of these entities are investment funds that are owned by a large and diversified number of investors. These funds are not consolidated because the Group does not own either a significant portion of the equity or the risks and rewards inherent in the assets.

During 2008, Group operating expenses included charges of £263m related to selective support of liquidity products managed by Barclays Global Investors and not consolidated by the Group. The Group have not provided any additional selective support subsequent to 31st December 2008.

The Group's accounting policies are set out on pages 193 to 203. Certain of these policies, as well as estimates made by management, are considered to be important to an understanding of the Group's financial condition since they require management to make difficult, complex or subjective judgements and estimates, some of which may relate to matters that are inherently uncertain. The following accounting policies include estimates which are particularly sensitive in terms of judgements and the extent to which estimates are used. Other accounting policies involve significant amounts of judgements and estimates, but the total amounts involved are not significant to the financial statements. Management has discussed the accounting policies and critical accounting estimates with the Board Audit Committee.

Fair value of financial instruments

Some of the Group's financial instruments are carried at fair value through profit or loss such as those held for trading, designated by management under the fair value option and non-cash flow hedging derivatives.

Other non-derivative financial assets may be designated as available for sale. Available for sale financial investments are initially recognised at fair value and are subsequently held at fair value. Gains and losses arising from changes in fair value of such assets are included as a separate component of equity. Financial instruments entered into as trading transactions, together with any associated hedging, are measured at fair value and the resultant profits and losses are included in net trading income, along with interest and dividends arising from long and short positions and funding costs relating to trading activities. Assets and liabilities resulting from gains and losses on financial instruments held for trading are reported gross in trading portfolio assets and liabilities or derivative financial instruments, reduced by the effects of netting agreements where there is an intention to settle net with counterparties.

The fair value of a financial instrument is the amount at which the instrument could be exchanged in a current transaction between willing parties, other than in a forced or liquidation sale. Where a valuation model is used to determine fair value, it makes maximum use of market inputs. Financial instruments with a fair value based on observable inputs include valuations determined by unadjusted quoted prices in an active market and market standard pricing models that use observable inputs.

Financial instruments whose fair value is determined, at least in part, using unobservable inputs are further categorised into Vanilla and Exotic products as follows:

- Vanilla products are valued using simple models such as discounted cash flow or Black Scholes models however, some of the inputs are not observable.

- Exotic products are over-the-counter products that are relatively bespoke, not commonly traded in the markets, and their valuation comes from sophisticated mathematical models where some of the inputs are not observable.

An analysis of financial instruments carried at fair value by valuation technique, including the extent of valuations based on unobservable inputs, together with a sensitivity analysis of valuations using unobservable inputs is included in Note 50.

Allowances for loan impairment and other credit risk provisions

Allowances for loan impairment represent management's estimate of the losses incurred in the loan portfolios as at the balance sheet date. Changes to the allowances for loan impairment and changes to the provisions for undrawn contractually committed facilities and guarantees provided are reported in the consolidated income statement as part of the impairment charge. Provision is made for undrawn loan commitments and similar facilities if it is probable that the facility will be drawn and result in recognition of an asset at an amount less than the amount advanced.

Within the retail and small businesses portfolios, which comprise large numbers of small homogeneous assets with similar risk characteristics where credit scoring techniques are generally used, statistical techniques are used to calculate impairment allowances on a portfolio basis, based on historical recovery rates and assumed emergence periods. These statistical analyses use as primary inputs the extent to which accounts in the portfolio are in arrears and historical information on the eventual losses encountered from such delinquent portfolios. There are many such models in use, each tailored to a product, line of business or customer category. Judgement and knowledge is needed in selecting the statistical methods to use when the models are developed or revised. The impairment allowance reflected in the financial statements for these portfolios is therefore considered to be reasonable and supportable. The impairment charge reflected in the income statement for these portfolios is £2,333m (2007: £1,605m) and amounts to 51% (2007: 70%) of the total impairment charge on loans and advances in 2008.

For larger accounts, impairment allowances are calculated on an individual basis and all relevant considerations that have a bearing on the expected future cash flows are taken into account, for example, the business prospects for the customer, the realisable value of collateral, the Group's position relative to other claimants, the reliability of customer information and the likely cost and duration of the work-out process. The level of the impairment allowance is the difference between the value of the discounted expected future cash flows (discounted at the loan's original effective interest rate), and its carrying amount. Subjective

Additional financial disclosure

Critical accounting estimates

judgements are made in the calculation of future cash flows. Furthermore, judgements change with time as new information becomes available or as work-out strategies evolve, resulting in frequent revisions to the impairment allowance as individual decisions are taken. Changes in these estimates would result in a change in the allowances and have a direct impact on the impairment charge. The impairment charge reflected in the financial statements in relation to larger accounts is £2,251 m (2007: £701 m) or 49% (2007: 30%) of the total impairment charge on loans and advances in 2007. Further information on impairment allowances is set out in Note 47 on page 264.

Goodwill

Management have to consider at least annually whether the current carrying value of goodwill is impaired. The first step of the impairment review process requires the identification of independent cash generating units, by dividing the Group business into as many largely independent income streams as is reasonably practicable. The goodwill is then allocated to these independent units. The first element of this allocation is based on the areas of the business expected to benefit from the synergies derived from the acquisition. The second element reflects the allocation of the net assets acquired and the difference between the consideration paid for those net assets and their fair value. This allocation is reviewed following business reorganisation. The carrying value of the unit, including the allocated goodwill, is compared to its fair value to determine whether any impairment exists. If the fair value of a unit is less than its carrying value, goodwill will be impaired. Detailed calculations may need to be carried out taking into consideration changes in the market in which a business operates (e.g. competitive activity, regulatory change). In the absence of readily available market price data this calculation is based

upon discounting expected pre-tax cash flows at a risk adjusted interest rate appropriate to the operating unit, the determination of both of which requires the exercise of judgement. The estimation of pre-tax cash flows is sensitive to the periods for which detailed forecasts are available and to assumptions regarding the long-term sustainable cash flows. While forecasts are compared with actual performance and external economic data, expected cash flows naturally reflect management's view of future performance. The most significant amounts of goodwill relate to UK Retail Banking, GRCB – Absa and Barclays Global Investors, where goodwill impairment testing performed in 2008 indicated that this goodwill was not impaired. Goodwill impairment of £111 m relating to FirstPlus and EquiFirst was recognised in 2008 (2007: nil). An analysis of goodwill by cluster, together with key assumptions underlying the impairment testing, is included in Note 21 on page 222.

Intangible assets

Intangible assets that derive their value from contractual customer relationships or that can be separated and sold and have a finite useful life are amortised over their estimated useful life. Determining the estimated useful life of these finite life intangible assets requires an analysis of circumstances, and judgement by the Bank's management. At each balance sheet date, or more frequently when events or changes in circumstances dictate, intangible assets are assessed for indications of impairment. If indications are present, these assets are subject to an impairment review. The impairment review comprises a comparison of the carrying amount of the asset with its recoverable amount: the higher of the asset's or the cash-generating unit's net selling price and its value in use. Net selling price is calculated by reference to the amount at which the asset could be disposed of in a binding sale agreement in an arm's length

transaction evidenced by an active market or recent transactions for similar assets. Value in use is calculated by discounting the expected future cash flows obtainable as a result of the asset's continued use, including those resulting from its ultimate disposal, at a market-based discount rate on a pre-tax basis. The most significant amounts of intangible assets relate to the GRCB – Absa and Lehman Brothers North American businesses.

Retirement benefit obligations

The Group provides pension plans for employees in most parts of the world. Arrangements for staff retirement benefits vary from country to country and are made in accordance with local regulations and customs. For defined contribution schemes, the pension cost recognised in the profit and loss account represents the contributions payable to the scheme. For defined benefit schemes, actuarial valuation of each of the scheme's obligations using the projected unit credit method and the fair valuation of each of the scheme's assets are performed annually in accordance with the requirements of IAS 19.

The actuarial valuation is dependent upon a series of assumptions, the key ones being interest rates, mortality, investment returns and inflation. Mortality estimates are based on standard industry and national mortality tables, adjusted where appropriate to reflect the Group's own experience. The returns on fixed interest investments are set to market yields at the valuation date (less an allowance for risk) to ensure consistency with the asset valuation. The returns on UK and overseas equities are based on the long-term outlook for global equities at the calculation date having regard to current market yields and dividend growth expectations. The inflation assumption reflects long-term expectations of both earnings and retail price inflation.

The difference between the fair value of the plan assets and the present value of the defined benefit obligation at the balance sheet date, adjusted for any historic unrecognised actuarial gains or losses and past service cost, is recognised as a liability in the balance sheet. An asset arising, for example, as a result of past over-funding or the performance of the plan investments, is recognised to the extent that it does not exceed the present value of future contribution holidays or refunds of contributions. To the extent that any unrecognised gains or losses at the start of the measurement year in relation to any individual defined benefit scheme exceed 10% of the greater of the fair value of the scheme assets and the defined benefit obligation for that scheme, a proportion of the excess is recognised in the income statement.

The Group's IAS 19 pension deficit across all schemes as at 31st December 2008 was £1,287m (2007: surplus of £393m). There are net recognised liabilities of £1,292m (2007: £1,501m) and unrecognised actuarial gains of £5m (2007: £1,894m). The net recognised liabilities comprised retirement benefit liabilities of £1,357m (2007: £1,537m) and assets of £65m (2007: £36m).

The Group's IAS 19 pension deficit in respect of the main UK scheme as at 31st December 2008 was £858m (2007: surplus of £668m). Among the reasons for this change were the large loss in value of the assets over the year, and to a lesser extent the strengthening of the allowance made for future improvement in mortality. Offsetting these were the increase in the AA long-term corporate bond yields which resulted in a higher discount rate of 6.75% (2007: 5.82%), a decrease in the inflation assumption to 3.16% (2007: 3.45%) and contributions paid. Further information on retirement benefit obligations, including assumptions, is set out in Note 30 to the accounts on page 234.

Analysis of results by business

Global Retail and Commercial Banking

UK Retail Banking profit before tax grew 7% to £1,369m. Income grew 4% to £4,482m, reflecting strong growth in Home Finance and minimal settlements on overdraft fees. Loans and advances grew 15% driven by a market share of net new mortgage lending of 36%. Operating expenses showed a modest increase of 2% reflecting active management of the cost base and reduced gains from the sale of property. The cost:income ratio improved one percentage point. Impairment charges increased 8% reflecting strong growth in assets and a deteriorating economic environment.

Barclays Commercial Bank profit before tax decreased 7% to £1,266m. Income growth of 7% principally reflected increased sales of treasury products. Loans and advances to customers increased 14% to £80.5bn. Costs increased 14% driven by lower gains on the sale of property, further investment in new payments capability, and growth in the operating lease business. Impairment charges increased 42% as the deteriorating economic environment caused higher delinquency and lower recovery rates on corporate credit.

Barclaycard profit before tax increased 31% to £789m, including £260m from Barclaycard International. Income growth of 27% reflected strong growth in Barclaycard International, the income related to Goldfish since acquisition, and gains relating to the Visa IPO and the sale of MasterCard shares. Costs increased 30% reflecting continued international growth, increased marketing expenditure and the impact of Goldfish. Impairment charges increased 33% reflecting growth in charges in the international businesses and the acquisition of Goldfish, partly offset by lower impairment in the other UK businesses.

GRCB – Western Europe profit before tax grew 31% to £257m. Income grew 53%, driven by very strong growth in deposits, mortgages

and commercial lending across the expanded franchise, as well as gains of £82m relating to the Visa IPO and the sale of MasterCard shares. Costs increased 38% reflecting the expansion of the network by 347 distribution points to 1,145 and continued strategic investment in the Premier and core retail businesses. Impairment charges increased £220m to £296m, largely driven by deteriorating trends in Spain which led to losses in property-related commercial banking exposures and credit cards.

GRCB – Emerging Markets profit before tax increased 34% to £134m. Income increased 91%, driven by retail expansion in India, entry into new markets in Russia and Pakistan and strong performances in Africa, as well as gains of £82m relating to the Visa IPO and sale of MasterCard shares. Operating expense growth of 82% reflected continued investment in business infrastructure, distribution and new markets. Distribution points increased 286 to 836. Impairment charges increased £127m to £166m reflecting asset growth, and increased wholesale impairment in Africa.

GRCB – Absa profit before tax decreased 8% to £552m. Income growth of 10% was driven by higher fees and commissions, balance sheet growth as well as a gain relating to the Visa IPO. Operating expenses increased 3%, well below the rate of inflation, reflecting investment in new distribution points, which increased 176 to 1,177, offset by good cost control. This led to a four percentage point improvement in the cost:income ratio to 59%. Impairment charges rose £201m to £347m, mainly due to prolonged high interest rates and inflation rates and increased customer indebtedness resulting in higher delinquency levels in the retail portfolios.

Investment Banking and Investment Management

Barclays Capital profit before tax was £1,302m in a very challenging market, down 44%, and included a gain on the acquisition of Lehman Brothers North American businesses of £2,262m. Net income of £2,808m was down 55% as the impact of market dislocation continued and included gross losses of £8,053m, partially offset by related income and hedges of £1,433m and gains of £1,663m from the general widening of credit spreads on structured notes issued by Barclays Capital. There were record performances in interest rate products, currency products, emerging markets, prime services and commodities. Equities, credit products, mortgages and asset backed securities and private equity were significantly impacted by market dislocation and recorded lower income than in 2007. Operating expenses, after absorbing Lehman Brothers North American businesses, were 5% lower than in 2007 due to lower performance related pay.

Barclays Global Investors profit before tax decreased 19% to £595m. Income fell 4% to £1,844m due to lower incentive fees. Operating expenses increased 5% and included charges of £263m (2007: £80m) related to selective support of liquidity products. Total assets under management were US\$1,495bn, reflecting net new assets of US\$99bn, negative market moves of US\$553bn and adverse exchange rate movements of US\$130bn.

Barclays Wealth profit before tax grew 119% to £671m, including a £326m profit on disposal of the closed life business, which contributed profit before tax of £104m before disposal. Income growth of 3% to £1,324m reflected strong growth in customer deposits and lending, partially offset by the impact of lower equity markets on fee income. Operating expenses decreased 4% reflecting strong cost control. Total client assets increased 10% (£12.6bn) to £145.1bn, with net new asset inflows and the acquisition of Lehman Brothers North American businesses offsetting the impact of negative market movements and the sale of the closed life business.

Analysis of results by business

Global Retail and Commercial Banking
UK Retail Banking

UK Retail Banking comprises Personal Customers, Home Finance, Local Business, Consumer Lending and Barclays Financial Planning. We have one of the largest branch networks in the UK with around 1,700 branches and an extensive network of cash machines.

What we do

We are transforming Barclays to be the best bank in the UK by designing innovative, simple and transparent propositions, streamlining operating platforms and further leveraging Barclays Group capabilities.

Our cluster of businesses aims to build broader and deeper relationships with customers. Personal Customers and Home Finance provide a wide range of products and services to retail customers, including current accounts, savings and investment products, mortgages branded Woolwich and general insurance. Barclays Financial Planning provides banking, investment products and advice to affluent customers.

Local Business provides banking services to small businesses. UK Retail Banking is also a gateway to more specialised services from other parts of Barclays such as Barclays Stockbrokers.

Our business serves 15.2 million UK customers.

Performance**2008/07**

UK Retail Banking profit before tax increased 7% (£94m) to £1,369m (2007: £1,275m) through solid income growth and continued good control of impairment and costs. The launch of new products and propositions supported a significant increase in customer accounts, with Current Accounts increasing 4% (0.4m) to 11.7m (2007: 11.3m), Savings

Accounts increasing 8% (0.9m) to 12.0m (2007: 11.1m) and Mortgage Accounts increasing 8% (62,000) to 816,000 (2007: 754,000).

Income grew 4% (£185m) to £4,482m (2007: £4,297m) reflecting strong growth in Home Finance and solid growth in Consumer Lending and Local Business, partially offset by reduced income from Personal Customer Savings Accounts due to the impact of the reductions in the UK base rates in the second half of 2008.

Net interest income increased 5% (£138m) to £2,996m (2007: £2,858m) driven by strong growth in loans and advances. Total average customer deposit balances increased 5% to £85.9bn (2007: £81.8bn), reflecting solid growth in Personal Customer and Local Business balances. The average liabilities margin declined to 2.01% (2007: 2.15%) reflecting the reductions in UK base rates in the second half of 2008.

Mortgage balances grew 18%, driven by increased share of new lending and higher levels of balance retention. Mortgage balances were £82.3bn at the end of the period (31st December 2007: £69.8bn), a market share of 7% (2007: 6%). Gross advances were stable at £22.9bn, with redemptions of £10.4bn (2007: £15.0bn). Net new lending was £12.5bn (2007: £8.0bn), a market share^b of 36% (2007: 8%). The average loan to value ratio of the mortgage book (including buy-to-let) on a current valuation basis was 40% (2007: 34%). The average loan to value ratio of new mortgage lending was 47% (2007: 49%). The assets margin increased to 1.25% (2007: 1.20%) reflecting increased returns from mortgages.

Net fee and commission income increased 10% (£116m) to £1,299m (2007: £1,183m) reflecting £116m settlements on overdraft fees in 2007. Excluding this, net fees and commissions were stable.

Impairment charges increased 8% (£43m) to £602m (2007: £559m), reflecting growth in customer assets of 15% and the impact of the current economic environment. Mortgage impairment charges were £24m (2007: release of £3m). Impairment charges within Consumer Lending increased 3%.

Number of UK savings accounts	12.0m	11.1m	11.0m
Total UK mortgage balances	£82.3bn	£69.8bn	£61.7bn
Local Business			
Number of Local Business customers	660,000	643,000	630,000

Notes

^a Decrease in 2007 reflects the consolidation of Woolwich and Barclays current accounts.

^b Excludes Housing Associations.

Operating expenses increased 2% (£49m) to £2,519m (2007: £2,470m) reflecting reduced gains from the sale of property of £75m (2007: £193m). Continued strong and active management of expense lines, including back-office consolidation and process efficiencies, funded increased investment in product development and distribution channels.

The cost:income ratio improved one percentage point to 56% (2007: 57%).

2007/06

UK Retail Banking profit before tax increased 8% (£94m) to £1,275m (2006: £1,181m) due to reduced costs and a strong improvement in impairment.

Income grew 2% (£67m) before the impact of settlements on overdraft fees in relation to prior years (£116m). This was driven by very strong growth in Personal Customer retail savings and good growth in Personal Customer current accounts, Home Finance and Local Business. Including the impact of settlements on overdraft fees, income decreased £49m to £4,297m (2006: £4,346m).

Net interest income increased 3% (£93m) to £2,858m (2006: £2,765m). Growth was driven by a higher contribution from deposits, through a combination of good balance sheet growth and an increased liability margin. Total average customer deposit balances increased 7% to £81.9bn (2006: £76.5bn), supported by the launch of new products.

Mortgage volumes increased significantly, driven by an improved mix of longer term value products for customers, higher levels of retention and continuing improvements in processing capability. Mortgage balances were £69.8bn at the end of the period (2006: £61.7bn), an approximate market share of 6% (2006: 6%). Gross advances were 25% higher at £23.0bn (2006: £18.4bn). Net lending was £8.0bn (2006: £2.4bn), representing market share of 8% (2006: 2%). The average loan to value

ratio of the residential mortgage book on a current valuation basis was 33%. The average loan to value ratio of new residential mortgage lending in 2007 was 54%. Consumer Lending balances decreased 4% to £7.9bn (2006: £8.2bn), reflecting the impact of tighter lending criteria.

Overall asset margins decreased as a result of the increased proportion of mortgages and contraction in unsecured loans.

Net fee and commission income reduced 4% (£49m) to £1,183m (2006: £1,232m). There was strong Current Account income growth in Personal Customers and good growth within Local Business. This was more than offset by settlements on overdraft fees.

Net premiums from insurance underwriting activities reduced 26% (£90m) to £252m (2006: £342m), as there continued to be lower customer take-up of loan protection insurance. Net claims and benefits on insurance contracts increased to £43m (2006: £35m).

Impairment charges decreased 12% (£76m) to £559m (2006: £635m) reflecting lower charges in unsecured Consumer Lending and Local Business. This was driven by improvements in the collection process which led to reduced flows into delinquency, lower levels of arrears and stable charge-offs. Mortgage impairment charges remained negligible.

Operating expenses reduced 2% (£62m) to £2,470m (2006: £2,532m), reflecting strong and active management of all expense lines, targeted processing improvements and back-office consolidation. Gains from the sale of property were £193m (2006: £253m). Increased investment was focused on improving the overall customer experience through converting and improving the branch network; revitalising the product offering; increasing operational and process efficiency; and meeting regulatory requirements.

The cost:income ratio improved one percentage point to 57%. Excluding the impact of settlements on overdraft fees, the cost:income ratio improved two percentage points to 56%.

Global Retail and Commercial Banking Barclays Commercial Bank

Barclays Commercial Bank is one of the UK's leading providers of banking solutions to business customers and clients with an annual turnover of more than £1m.

What we do

Barclays Commercial Bank provides banking services to more than 81,000 customers in the UK via a network of relationship, regional, industry-sector and product specialists.

Working closely with our clients to understand their needs, we deliver financing, risk management, trade and cash management solutions constructed from a comprehensive suite of products, expertise and services. This includes specialist asset financing and leasing facilities.

Performance

2008/07

Barclays Commercial Bank profit before tax decreased 7% (£91m) to £1,266m (2007: £1,357m) reflecting a resilient performance in challenging market conditions. The impact of growth in net fee and commission income and continued strong growth in customer lending was offset by increased impairment charges and higher operating expenses.

Income increased 7% (£181m) to £2,745m (2007: £2,564m).

Net interest income improved 1% (£10m) to £1,757m (2007: £1,747m). There was strong growth in average customer assets, particularly term loans, which increased 14% to £61.7bn (2007: £53.9bn) reflecting the continued commitment to lend to viable businesses. The assets margin decreased 25 basis points to 1.55% (2007: 1.80%) due, in part, to a continued focus on lower risk term lending. Average customer accounts grew 3% to £47.6bn (2007: £46.4bn), and the deposit margin declined slightly to 1.47% (2007: 1.49%) partly reflecting the reductions in UK base rates in the second half of 2008.

Non-interest income increased to 36% of total income (2007: 32%) partly reflecting continued focus on cross sales and efficient balance sheet utilisation. Net fee and commission income increased 15% (£111m) to £861m (2007: £750m) due to increased income from foreign exchange, derivative sales and debt fee income.

Income from principal transactions fell to £22m (2007: £56m) due to lower equity realisations.

Other income of £105m (2007: £11m) included a £39m gain arising from the restructuring of Barclays interest in a third party finance operation. This gain was offset by a broadly similar tax charge. Other income also included £29m (2007: £7m) rental income from operating leases.

Impairment as %
of loans and advances
to customers and banks

Key facts

	2008	2007	2006
Number of customers	81,200	83,800	77,100
Number of colleagues	9,800	9,200	8,100

Impairment charges increased 42% (£122m) to £414m (2007: £292m) primarily reflecting higher impairment losses in Larger Business, particularly in the final quarter as the UK corporate credit environment deteriorated. Impairment as a percentage of period-end loans and advances to customers and banks increased to 0.60% (2007: 0.45%).

Operating expenses increased 14% (£134m) to £1,063m (2007: £929m) reflecting lower gains on the sale of property of £10m (2007: £40m), investment in a new payments capability (2008: £69m, 2007: £42m), growth in the operating lease business (2008: £31m, 2007: £7m) and investment in risk and operations infrastructure, sales force capability and product specialists.

2007/06

Barclays Commercial Bank profit before tax decreased £5m to £1,357m (2006: £1,362m) due to continued good income growth partially offset by lower gains from business disposals. Profit before business disposals increased 4% to £1,343m (2006: £1,286m).

Income increased 7% (£160m) to £2,564m (2006: £2,404m). Non-interest income increased to 32% of total income (2006: 29%), reflecting continuing focus on cross sales and efficient balance sheet utilisation. There was very strong growth in net fee and commission income, which increased 17% (£107m) to £750m (2006: £643m) due to very strong performance in lending fees. There was also good growth in transaction

related income, foreign exchange and derivatives transactions undertaken on behalf of clients.

Net interest income improved 2% (£37m) to £1,747m (2006: £1,710m). Average customer lendings increased 3% to £53.9bn (2006: £52.3bn) and 5%, excluding the impact of the vehicle leasing and European vendor finance businesses sold in 2006. Average customer accounts grew 4% to £46.4bn (2006: £44.8bn). The asset margin decreased by 12 basis points to 1.80%, reflecting an increased focus on higher quality lending and competitive market conditions. The liabilities margin remained broadly stable at 1.49%.

Income from principal transactions primarily reflecting venture capital and other equity realisations increased 87% (£26m) to £56m (2006: £30m).

Impairment charges increased 15% (£39m) to £292m (2006: £253m), mainly due to a higher level of impairment losses in Larger Business as impairment trended towards risk tendency. There was a reduction in impairment levels in Medium Business due to a tightening of the lending criteria.

Operating expenses increased 7% (£61m) to £929m (2006: £868m). Operating expenses are net of gains of £39m (2006: £60m) on the sale of property. Growth in operating expenses was focused on continuing investment in operations, infrastructure, and new initiatives in product development and sales capability.

Analysis of results by business

Global Retail and Commercial Banking Barclaycard

Barclaycard is a multi-brand international credit card, consumer lending and payment processing business. Our credit card was the first to be launched in the UK in 1966 and is now one of the leading credit card businesses in Europe, with a fast growing business in the United States and South Africa.

What we do

In the UK our activities include all Barclaycard branded credit cards, secured lending business and Barclays Partner Finance, our retail finance business. In addition to these activities, Barclaycard also operates partnership cards with leading brands such as SkyCard. We continue to lead the UK market and we strengthened our position in 2008 with the purchase of the Goldfish portfolio, adding more than 1m customers to our growing customer base.

Barclaycard's international presence continues to grow very strongly, with international customers now almost equalling the number in the UK. We currently operate in Germany, South Africa and the United States, where we are one of the fastest-growing credit card businesses. In Scandinavia, we operate through Entercard, a joint venture with Swedbank.

Our payment processing business, Barclaycard Business, processes card payments for 89,000 retailers and merchants, and issues credit and charge cards to corporate customers and the UK Government. It is Europe's number one issuer of Visa Commercial Cards with over 132,000 corporate customers.

Performance

2008/07

Barclaycard profit before tax increased 31% (£186m) to £789m (2007: £603m), driven by strong international income growth and lower UK impairment charges. 2008 profit included £40m from the acquisition of, and contribution from, Goldfish, Discover's UK credit card business, acquired on 31st March 2008. The scale of the UK and international businesses increased substantially with total customer numbers up 31% to 23.3m.

Income increased 27% (£689m) to £3,219m (2007: £2,530m), reflecting strong growth in Barclaycard International and £156m from the inclusion of Goldfish, partially offset by a decline in FirstPlus following its closure to new business.

Net interest income increased 30% (£412m) to £1,786m (2007: £1,374m), driven by 58% growth in international average extended credit card balances to £5.2bn. The margin increased to 6.92% (2007: 6.51%), due to a change in the product mix with an increased weighting to card lending, following the decision to stop writing new business in FirstPlus.

Net fee and commission income increased 14% (£156m) to £1,299m (2007: £1,143m), driven by growth in Barclaycard International.

Investment income increased £69m to £80m (2007: £11m), reflecting a £64m gain from the Visa IPO and a £16m gain from the sale of shares in MasterCard.

Other income increased £44m to £19m (2007: £25m loss), reflecting a gain from a portfolio sale in the United States. 2007 results reflected a £27m loss on disposal of part of the Monument card portfolio.

Impairment charges increased 33% (£270m) to £1,097m (2007: £827m), reflecting £252m growth in charges in the international businesses and £68m from the inclusion of Goldfish. These factors were partially offset by £50m lower impairment in the other UK businesses with reduced flows into delinquency and lower levels of arrears.

Performance indicators

Number of Barclaycard International customers m

Number of UK customers m

Key facts

	2008	2007	2006
Number of Barclaycard UK customers	11.7m	10.1m	9.8m
UK credit cards – average outstanding balances	£9.9bn	£8.4bn	£9.4bn
UK credit cards – average extended credit balances	£8.0bn	£6.9bn	£8.0bn
Number of Barclaycard International customers	11.6m	7.7m	6.0m
International – average outstanding balance	£6.5bn	£4.1bn	£3.1bn
International – average extended credit balances	£5.2bn	£3.3bn	£2.5bn
Secured lending – average outstanding balance	£4.7bn	£4.3bn	£3.4bn
Number of retailer relationships	89,000	93,000	93,000

Operating expenses increased 30% (£329m) to £1,422m (2007: £1,093m), reflecting continued international growth and increased marketing investment. Operating expenses reflected Goldfish expenses of £140m, including restructuring costs of £64m.

The acquisition of Goldfish resulted in a gain on acquisition of £92m.

Barclaycard International maintained its strong growth momentum, delivering a 71% (£108m) increase in profit before tax to £260m (2007: £152m). Barclaycard US profit before tax was US\$249m which exceeded delivery of the financial plan of US\$150m set out at the time of acquisition. Strong balance sheet growth in Barclaycard US included US\$1.9bn of credit card receivables acquired from FIA Card Services in August 2008, furthering the existing partnership agreement with US Airways. The acquisition of a majority stake in Woolworths Financial Services in October 2008, added 1.6 million customers to the existing Absa credit card business in South Africa. The Entercard joint venture with Swedbank continued to build presence in Norway, Sweden and Denmark.

2007/06

Barclaycard profit before tax increased 16% (£81m) to £603m (2006: £522m), driven by strong international growth coupled with a significant improvement in UK impairment charges. Other income included a £27m loss on disposal of part of the Monument card portfolio. 2006 results reflected a property gain of £38m.

Income decreased 2% (£46m) to £2,530m (2006: £2,576m), reflecting strong growth in Barclaycard International, offset by a decline in UK Cards revenue resulting from a more cautious approach to lending in the UK and a £27m loss on disposal of part of the Monument card portfolio.

Net interest income increased 1% (£11m) to £1,374m (2006: £1,363m), due to strong organic growth in international average

extended credit card balances, up 32% to £3.3bn and average secured consumer lending balances up 26% to £4.3bn, partially offset by lower UK average extended credit card balances which fell 14% to £6.9bn. Margins fell to 6.51% (2006: 7.05%) due to higher average base rates across core operating markets and a change in the product mix with an increased weighting to secured lending.

Net fee and commission income fell 3% (£40m) to £1,143m (2006: £1,183m), with growth in Barclaycard International offset by our actions in response to the Office of Fair Trading's findings on late and overlimit fees in the UK which were implemented in August 2006.

Impairment charges improved 21% (£226m) to £827m (2006: £1,053m), reflecting reduced flows into delinquency, lower levels of arrears and lower charge-offs in UK Cards. We made changes to our impairment methodologies to standardise our approach and in anticipation of Basel II. The net positive impact of these changes in methodology was offset by an increase in impairment charges in Barclaycard International and secured consumer lending.

Operating expenses increased 10% (£100m) to £1,093m (2006: £993m). Excluding a property gain of £38m in 2006, operating expenses increased 6% (£62m), reflecting continued investment in expanding our businesses in Europe and the United States. Costs in the UK businesses were broadly flat, with investment in new UK product innovations such as Barclaycard OnePulse being funded out of operating efficiencies.

Barclaycard International continued to gain momentum, delivering a profit before tax of £152m against a profit before tax of £8m in 2006. The Entercard joint venture continued to perform ahead of plan and entered the Danish market, extending its reach across the Scandinavian region. Barclaycard US was profitable, with very strong average balance growth and a number of new card partnerships, including Lufthansa Airlines and Princess Cruise Lines.

Global Retail and Commercial Banking Western Europe

GRCB – Western Europe comprises our retail and commercial banking operations as well as our Barclaycard businesses in Spain, Portugal, France and Italy.

What we do

GRCB – Western Europe serves more than 2m retail and commercial banking customers in France, Italy, Portugal and Spain through a variety of distribution channels including 961 branches, 184 sales centres and 988 ATMs.

GRCB – Western Europe provides a variety of products and services including retail mortgages, current and deposit accounts, commercial lending, unsecured lending, credit cards, investments and insurance products, serving the needs of Barclays retail, mass affluent and corporate customers.

Performance

2008/07

GRCB – Western Europe profit before tax grew 31% (£61m) to £257m (2007: £196m), despite challenging market conditions in Spain and accelerated investment in the expansion of the franchise. Distribution points increased 347 to 1,145 (2007: 798), including 149 in Italy. Strong income growth including gains of £82m from the Visa IPO and the sale of shares in MasterCard was partially offset by increased impairment and higher operating costs. Profit before tax was favourably impacted by the 16% appreciation in the average value of the Euro against Sterling.

Income increased 53% (£493m) to £1,430m (2007: £937m), reflecting growth in both net interest income and net fee and commission income.

Net interest income increased 62% (£329m) to £856m (2007: £527m), driven by a 63% increase in customer liabilities to £15.3bn (2007: £9.4bn) and a 53% increase in customer assets to £53.5bn (2007: £35.0bn).

Net fee and commission income increased 19% (£61m) to £383m (2007: £322m). Increased fees in retail and in the life insurance businesses were offset by lower market-related investment revenue.

Principal transactions grew £59m to £165m (2007: £106m) including

gains from the Visa IPO (£65m) and the sale of shares in MasterCard (£17m) which enabled GRCB – Western Europe to invest in the expansion of the business.

Impairment charges increased £220m to £296m (2007: £76m). This increase was principally due to higher charges in Spanish commercial property (£82m) and deterioration of the Spanish credit card portfolio (£66m) as a consequence of the rapid slowdown in the Spanish economy.

Operating expenses increased 38% (£256m) to £929m (2007: £673m), reflecting the rapid expansion of the retail distribution network and the strengthening of the Premier segment. Operating expenses also included £55m (2007: £22m) gains from the sale of property.

Gain on acquisition of £52m (2007: £nil) arose from the purchase of the Italian residential mortgage business of Macquarie Bank Limited in November 2008.

2007/06

GRCB – Western Europe profit before tax increased 21% (£34m) to £196m (2006: £162m). The performance reflected strong income growth driven by an increase in distribution points of 145 to 798 (2006: 653).

Income increased 25% (£186m) to £937m (2006: £751m), reflecting strong growth in net fee and commission income and principal transactions.

Net interest income increased 21% (£91m) to £527m (2006: £436m), driven by a 38% increase in customer liabilities to £9.4bn (2006: £6.8bn) and a 30% increase in customer assets to £35.0bn (2006: £26.9bn).

Net fee and commission income increased 30% (£74m) to £322m (2006: £248m), driven by the expansion of the customer base.

Principal transactions grew 34% (£27m) to £106m (2006: £79m), reflecting gains on equity investments.

Impairment charges grew 100% (£38m) to £76m (2006: £38m), reflecting very strong balance sheet growth.

Operating expenses grew 22% (£123m) to £673m (2006: £550m), driven by the expansion of the distribution network. Operating expenses included property sales in Spain of £22m (2006: £55m).

Global Retail and Commercial Banking Emerging Markets

GRCB – Emerging Markets comprises our retail and commercial banking operations, as well as our Barclaycard businesses, in 14 countries across Africa, the Middle East and South East Asia.

What we do

GRCB – Emerging Markets serves retail and commercial banking customers in Botswana, Egypt, Ghana, India, Kenya, Mauritius, Pakistan, Russia, Seychelles, Tanzania, Uganda, the UAE, Zambia and Zimbabwe.

Through a network of more than 830 distribution points and 1,440 ATMs, we provide 4.2m customers and clients with a full range of products and services. This includes current accounts, savings, investments, mortgages and secured and unsecured lending.

Performance

2008/07

GRCB – Emerging Markets profit before tax increased 34% (£34m) to £134m (2007: £100m). Very strong income growth, including £82m from the Visa IPO and the sale of shares in MasterCard, absorbed the increased investment across existing and new markets and higher impairment charges. The number of distribution points increased 286 to 836 (2007: 550). New market entries in 2008 comprised the acquisition of Expobank in Russia, the launch of a new business in Pakistan and the announced acquisition of Bank Akita in Indonesia.

Income increased 91% (£486m) to £1,019m (2007: £533m), reflecting growth in lending, deposit taking and fee-driven transactional revenues.

Net interest income increased 93% (£297m) to £616m (2007: £319m), loans and advances to customers increased 98% to £10.1bn (2007: £5.1bn). The assets margin decreased 167 basis points to 4.95% (2007: 6.62%), reflecting higher funding costs, partially offset by improvement in the product mix. Customer accounts increased 55% to £9.6bn (2007: £6.2bn). The deposit margin improved 142 basis points to 2.17% (2007: 0.75%), driven by a change in the product mix and a higher return from funding the assets.

Key facts

	2008	2007	2006
Number of distribution points	836	550	214
Average liabilities balances	£7.6bn	£5.1bn	£4.0bn
Average asset balances	£7.1bn	£3.6bn	£2.3bn

Net fee and commission income increased 59% (£83m) to £223m (2007: £140m), primarily driven by very strong growth in commercial banking and treasury fee income.

Principal transactions increased £97m to £169m (2007: £72m), reflecting higher foreign exchange income, a gain of £68m relating to the Visa IPO and a gain of £14m from the sale of shares in MasterCard.

Impairment charges increased £127m to £166m (2007: £39m), reflecting higher assets and delinquencies, particularly in India and increased wholesale impairment in Africa.

Operating expenses increased 82% (£324m) to £719m (2007: £395m), reflecting continued investment in new markets and expansion of the business in existing markets, with investment in infrastructure and the roll-out of global platforms.

2007/06

GRCB – Emerging Markets profit before tax decreased 74% to £100m (2006: £384m). The performance in 2006 reflected the sale of First Caribbean International Bank which resulted in a profit of £247m in December 2006. In addition, profits of £41m were generated by the First Caribbean business up to date of sale. Excluding First Caribbean, the performance reflected very strong income growth driven by a rapid growth

in distribution points to 550 (2006: 214), as well as the launch of new businesses in India and UAE.

Income increased 35% (£137m) to £533m (2006: £396m) driven by new business in India and UAE and excellent performances in Egypt, Kenya and Ghana.

Net interest income increased 30% (£73m) to £319m (2006: £246m). Total customer loans increased 89% (£2.4bn) to £5.1bn (2006: £2.7bn) with lending margins improving with changing product mix. Customer deposits increased 47% (£2.0bn) to £6.2bn (2006: £4.2bn), driven by growth across the markets.

Net fee and commission income declined marginally (£1m) to £140m (2006: £141m).

Principal transactions increased £68m to £72m (2006: £4m), reflecting gains on equity investments and higher foreign exchange income across markets.

Impairment charges rose 30% (£9m) to £39m (2006: £30m). The increase reflected very strong balance sheet growth in 2006 and 2007.

Operating expenses grew 46% (£125m) to £395m (2006: £270m), driven by the rapid expansion of the distribution network across all markets and investment in people and infrastructure to support future growth across the franchise.

Analysis of results by business

Global Retail and Commercial Banking Absa

GRCB – Absa comprises three operating divisions: Retail Banking, Commercial Banking and a Bancassurance division. The Absa Group's other businesses are Absa Capital and Absa Card, which are included in Barclays Capital and Barclaycard respectively.

What we do

GRCB – Absa forms part of Absa Group Limited, one of South Africa's largest financial services groups, listed on the Johannesburg Stock Exchange Limited. GRCB – Absa offers a complete range of banking products and services, including current accounts, savings products, bancassurance, mortgages, instalment finance and wealth management. It also offers customised business solutions for commercial and large corporate customers.

Absa's business is conducted primarily in South Africa. In addition to this, the Group has equity holdings in banks in Mozambique, Angola and Tanzania.

Absa serves more than 10m customers through a range of physical channels that include 1,177 distribution points and 8,719 ATMs, as well as electronic channels such as telephone and online banking.

Performance

2008/07

Impact of Absa Group Limited on Barclays Results

Absa Group Limited profit before tax of R15,209m (2007: R14,077m), which increased 8%, is translated into Barclays results at an average exchange rate of R15.17/£ (2007: R14.11/£), a 7% depreciation in the

average value of the Rand against Sterling. Consolidation adjustments reflected the amortisation of intangible assets of £49m (2007: £47m) and internal funding and other adjustments of £169m (2007: £129m). The resulting profit before tax of £785m (2007: £822m) is represented within GRCB – Absa £552m (2007: £597m), Barclays Capital £175m (2007: £155m) and Barclaycard £58m (2007: £70m).

Absa Group Limited's total assets were R773,758m (31st December 2007: R640,909m), growth of 21%. This is translated into Barclays results at a period end exchange rate of R13.74/£ (2007: R13.64/£).

Global Retail and Commercial Banking – Absa

GRCB – Absa profit before tax decreased 8% (£45m) to £552m (2007: £597m), owing to challenging market conditions and the 7% depreciation in the average value of the Rand against Sterling. Profit before tax included a gain of £47m relating to the Visa IPO. Very strong Rand income growth was partially offset by increased impairment and investment in the expansion of the franchise by 176 distribution points to 1,177 (2007: 1,001).

Total income increased 10% (£211m) to £2,324m (2007: £2,113m).

Net interest income improved 5% (£49m) to £1,104m (2007: £1,055m) reflecting strong balance sheet growth. Average customer assets increased 9% to £27.7bn (2007: £25.3bn), primarily driven by retail and commercial mortgages and commercial cheque accounts. The assets margin increased to 2.79% (2007: 2.70%) as a result of a focus on pricing for risk and a change in the composition of the book, partially offset by the higher cost of wholesale funding. Average customer liabilities increased 17% to £13.5bn (2007: £11.5bn), primarily driven by retail savings, with margins down 15 basis points to 3.06% (2007: 3.21%) reflecting the emphasis on liquidity and strong growth in lower margin retail deposits.

Net fee and commission income increased 11% (£78m) to £762m (2007: £684m), underpinned by retail transaction volume growth.

Income Profit before tax

Performance indicators

Number of customers m

Number of distribution points (branches and sales centres)

Key facts

	2008	2007	2006
Number of ATMs	8,719	8,162	7,411
Number of corporate customers	107,000	100,000	84,000

Principal transactions increased £41m to £111m (2007: £70m) reflecting gains on economic hedges relating to the commercial property finance and liquid asset portfolios.

Other income increased £36m to £113m (2007: £77m), reflecting a gain of £47m from the Visa IPO.

Impairment charges increased £201m to £347m (2007: £146m) as a result of rising delinquency levels in the retail portfolios, which have been impacted by rising interest and inflation rates and increasing consumer indebtedness.

Operating expenses increased 3% (£38m) to £1,305m (2007: £1,267m). The cost:income ratio improved from 63% to 59%.

2007/06

Impact of Absa Group Limited on Barclays results

Absa Group Limited's profit before tax of R14,077m (2006: R11,417m) is translated into Barclays results at an average exchange value of R14.11/£ (2006: R12.47/£), a 12% depreciation in the average value of the Rand against Sterling. Consolidation adjustments reflected the amortisation of intangible assets of £47m (2006: £69m) and internal funding and other adjustments of £129m (2006: £97m). The resulting profit before tax of £822m (2006: £750m) is represented within GRCB – Absa £597m (2006: £609m), Barclays Capital £155m (2006: £71m) and Barclaycard £70m (2006: £70m).

Absa Group Limited's total assets were R640,909m (2006: R495,112m), a growth of 29%. This is translated into Barclays results at a period-end exchange rate of R13.64/£ (2006: R13.71/£). The capital investment was hedged against currency movements in 2007.

Global Retail and Commercial Banking – Absa

GRCB – Absa profit before tax decreased 2% (£12m) to £597m (2006: £609m) mainly owing to the weaker currency. The impact of the weaker

currency was offset by very good performances from Retail Banking and Absa Corporate and Business Bank. Key factors impacting the results included: very strong asset and income growth; the diversification of earnings in favour of investment banking and commercial banking; an increased retail credit impairment charge, and the achievement of the Absa – Barclays synergy target 18 months ahead of schedule.

Income decreased 2% (£32m) to £1,999m (2006: £2,031m). Net interest income increased by 7% (£72m) to £1,055m (2006: £983m), driven by growth in loans and advances and deposits at improved margins. Loans and advances to customers increased 27% from 31st December 2006 mainly driven by growth of 23% in mortgages.

Net fee and commission income decreased by 9% (£70m) to £684m (2006: £754m) mainly owing to the weaker currency. The increase in local currency reflects a growth of 3% underpinned by increased transaction volumes in Retail Banking and Absa Corporate and Business Bank.

Principal transactions decreased £36m to £70m (2006: £106m) reflecting losses on economic hedges relating to the commercial property finance and liquid asset portfolios.

Other income increased £23m to £77m (2006: £54m).

Impairment charges increased £34m to £146m (2006: £112m) from the cyclically low levels of recent years. Arrears in retail portfolios increased driven by interest rate increases in 2006 and 2007. Impairment charges as a percentage of loans and advances to customers was 0.49%, ahead of the 0.48% charge in 2006 but within long-term industry averages.

Operating expenses decreased 4% (£52m) to £1,267m (2006: £1,319m), resulting from the realisation of synergy benefits of R1,428m (£100m) to date thus achieving the synergy target of R1.4bn 18 months ahead of schedule. This was partially offset by the increased investment in new distribution outlets and staff in order to support continued growth in volumes and customers.

Investment Banking and Investment Management Barclays Capital

Barclays Capital is a leading global investment bank providing large corporate, government and institutional clients with a full spectrum of solutions to their strategic advisory, financing and risk management needs.

What we do

Barclays Capital is a global investment bank, which offers clients the full range of services covering strategic advisory and M&A; equity and fixed income capital raising and corporate lending; and risk management across foreign exchange, interest rates, equities and commodities.

Activities are organised into three principal areas: Global Markets, which includes commodities, credit products, equities, foreign exchange, interest rate products; Investment Banking, which includes corporate advisory, Mergers and Acquisitions, equity and fixed-income capital raising and corporate lending; and Private Equity and Principal Investments. Barclays Capital includes Absa Capital, the investment banking business of Absa.

Barclays Capital works closely with all other parts of the Group to leverage synergies from client relationships and product capabilities.

Performance

2008/07

In an exceptionally challenging market environment Barclays Capital profit before tax decreased 44% (£1,033m) to £1,302m (2007: £2,335m). Profit before tax included a gain on the acquisition of Lehman Brothers North American businesses of £2,262m. Absa Capital profit before tax grew 13% to £175m (2007: £155m).

Net income included gross losses of £8,053m (2007: £2,999m) due to continuing dislocation in the credit markets. These losses were partially offset by income and hedges of £1,433m (2007: £706m), and gains of £1,663m (2007: £658m) from the general widening of credit spreads on structured notes issued by Barclays Capital. The gross losses, comprised £6,290m (2007: £2,217m) against income and £1,763m (2007: £782m) in impairment charges. Further detail is provided on page 107.

The integration of the Lehman Brothers North American businesses is complete and the acquired businesses made a positive contribution, with

good results in equities, fixed income and advisory. There was a gain on acquisition of £2,262m. Not included in this gain is expenditure relating to integration of the acquired business.

Income was down 27% at £5,231m (2007: £7,119m) driven by the impact of the market dislocation. Underlying income, which excludes the gross losses, related income and hedges, and gains on the widening of credit spreads was 6% above the prior year and included strong contributions from interest rates, currency products, emerging markets, prime services and commodities. There was very strong underlying growth in the US driven by fixed income, prime services and the acquired businesses. In other regions income fell driven by the challenging environment.

Net trading income decreased 60% (£2,233m) to £1,506m (2007: £3,739m) reflecting losses from the credit market dislocation and weaker performance in credit products and equities. This was partially offset by significant growth in interest rates, foreign exchange, emerging markets and prime services. Average DVaR at 95% increased by 64% to £53.4m driven by higher credit spread and interest rate risk.

Net investment income decreased 41% (£394m) to £559m reflecting the market conditions. Net interest income increased 46% (£545m) to £1,724m (2007: £1,179m), driven by strong results in global loans and money markets. Net fee and commission income from advisory and origination activities increased 16% (£194m) to £1,429m. The corporate lending portfolio, including leveraged finance, increased 46% to £76.6bn (31st December 2007: £52.3bn) driven by the decline in the value of Sterling relative to other currencies as well as draw downs on existing loan facilities and the extension of new loans at current terms to financial and manufacturing institutions.

Impairment charges and other credit provisions of £2,423m (2007: £846m) included £1,763m (2007: £782m) due to the credit market dislocation. Other impairment charges of £660m (2007: £64m) principally related to private equity, prime services and the loan book.

Operating expenses fell 5% (£199m) to £3,774m (2007: £3,973m) due to lower performance related pay, partially offset by operating costs of the acquired businesses. The cost:net income ratio increased to 134% (2007: 63%) and the compensation cost:net income ratio increased to 82% (2007: 47%). Amortisation of intangible assets increased £38m to £92m (2007: £54m).

Total headcount increased 6,900 to 23,100 (31st December 2007: 16,200). Prior to the acquisition of Lehman Brothers North American businesses, headcount during 2008 was materially unchanged except for hiring associated with the annual global graduate programme. The acquisition initially added 10,000 to the headcount but there were reductions in the fourth quarter as the US businesses were integrated.

2007/06

Barclays Capital delivered profits ahead of the record results achieved in 2006 despite challenging trading conditions in the second half of the year. Profit before tax increased 5% (£119m) to £2,335m (2006: £2,216m). There was strong income growth across the Rates businesses and excellent results in Continental Europe, Asia and Africa demonstrating the breadth of the client franchise. Net income was slightly ahead at £6,273m (2006: £6,225m) and costs were tightly managed, declining slightly year on year. Absa Capital delivered very strong growth in profit before tax to £155m (2006: £71m).

The US sub-prime driven market dislocation affected performance in the second half of 2007. Exposures relating to US sub-prime were actively managed and declined over the period. Barclays Capital's 2007 results reflected gross losses of £2,999m (2006: £nil) due to the dislocation of credit markets. These losses were partially offset by income and hedges of £706m (2006: £nil) and gains of £658m (2006: £nil) from the general widening of credit spreads on structured notes issued by Barclays Capital. The gross losses comprised £2,217m (2006: £nil) against income and £782m (2006: £nil) in impairment charges.

Income increased 14% (£852m) to £7,119m (2006: £6,267m) as a result of very strong growth in interest rate, currency, equity, commodity and emerging market asset classes. There was excellent income growth in continental Europe, Asia, and Africa. Average DVaR increased 13% to £42m (2006: £37.1m) in line with income.

Secondary income, comprising principal transactions (net trading income and net investment income), is mainly generated from providing client financing and risk management solutions. Secondary income increased 11% (£578m) to £5,871m (2006: £5,293m).

Net trading income increased 5% (£177m) to £3,739m (2006: £3,562m) with strong contributions from fixed income, commodities, equities, foreign exchange and prime services businesses. These were largely offset by net losses in the business affected by sub-prime

mortgage related write-downs. The general widening of credit spreads that occurred over the course of the second half of 2007 also reduced the carrying value of the £40.7bn of structured notes issued by Barclays Capital held at fair value on the balance sheet, resulting in gains of £658m (2006: £nil). Net investment income increased 66% (£380m) to £953m (2006: £573m) as a result of a number of private equity realisations, investment disposals in Asia and structured capital markets transactions. Net interest income increased 2% (£21m) to £1,179m (2006: £1,158m), driven by higher contributions from money markets. The corporate lending portfolio increased 29% to £52.3bn (2006: £40.6bn), largely due to an increase in drawn leveraged finance positions and a rise in drawn corporate loan balances.

Primary income, which comprises net fee and commission income from advisory and origination activities, grew 30% (£283m) to £1,235m (2006: £952m), with good contributions from bonds and loans.

Impairment charges and other credit provisions of £846m included £722m against ABS CDO Super Senior exposures, £60m from other credit market exposures and £58m relating to drawn leveraged finance underwriting positions. Other impairment charges on loans and advances amounted to a release of £7m (2006: £44m release) before impairment charges on available for sale assets of £13m (2006: £86m).

Operating expenses decreased 1% (£36m) to £3,973m (2006: £4,009m). The cost:net income ratio improved to 63% (2006: 64%) and the compensation cost:net income ratio improved by two percentage points to 47% (2006: 49%). Performance related pay, discretionary investment spend and short term contractor resources represented 42% (2006: 50%) of the cost base. Amortisation of intangible assets of £54m (2006: £13m) principally related to mortgage service rights.

Total headcount increased 3,000 during 2007 to 16,200 (2006: 13,200) including 800 from the acquisition of EquiFirst. The majority of organic growth was in Asia Pacific.

Analysis of results by business

Investment Banking and Investment Management Barclays Global Investors

Barclays Global Investors (BGI) is one of the world's largest asset managers and a leading global provider of investment management products and services. We are the global leader in assets and products in the exchange traded funds business, with 360 funds for institutions and individuals trading globally. BGI's investment philosophy is founded on managing all dimensions of performance: a consistent focus on controlling risk, return and cost.

With a 3,000-plus strong workforce, we currently have over £1 trn in assets under management, for 3,000 clients around the world.

What we do

BGI offers structured investment strategies such as indexing, global asset allocation and risk controlled active products including hedge funds and provides related investment services such as securities lending, cash management and portfolio transition services.

BGI collaborates with the other Barclays businesses, particularly Barclays Capital and Barclays Wealth, to develop and market products and leverage capabilities to better serve the client base.

Performance

2008/07

Barclays Global Investors profit before tax decreased 19% (£139m) to £595m (2007: £734m). Profit was impacted by the cost of provision of selective support of liquidity products of £263m (2007: £80m) and an 8% appreciation in the average value of the US Dollar against Sterling.

Income declined 4% (£82m) to £1,844m (2007: £1,926m).

Net fee and commission income declined 1% (£19m) to £1,917m (2007: £1,936m). This was primarily attributable to reduced incentive fees of £49m (2007: £198m), partially offset by increased securities lending revenue.

Operating expenses increased 5% (£57m) to £1,249m (2007: £1,192m). Operating expenses included charges of £263m (2007: £80m) related to selective support of liquidity products, partially offset by a reduction in performance related costs. The cost:income ratio increased to 68% (2007: 62%).

Number of iShares products	360	324	191
Number of institutional clients	3,000	3,000	2,900

Total assets under management remained flat at £1,040bn (2007: £1,044bn) comprising £61bn of net new assets, £234bn of favourable exchange movements and £299bn of adverse market movements. In US Dollar terms assets under management decreased 28% (US\$584bn) to US\$1,495bn (2007: US\$2,079bn), comprising US\$99bn of net new assets, US\$130bn of negative exchange rate movements and US\$553bn of negative market movements.

2007/06

Barclays Global Investors delivered solid growth in profit before tax, which increased 3% (£20m) to £734m (2006: £714m). Very strong US Dollar income and strong profit growth was partially offset by the 8% depreciation in the average value of the US Dollar against Sterling.

Income grew 16% (£261m) to £1,926m (2006: £1,665m).

Net fee and commission income grew 17% (£285m) to £1,936m (2006: £1,651m). This was primarily attributable to increased management fees and securities lending. Incentive fees increased 6% (£12m) to £198m (2006: £186m). Higher asset values, driven by higher market levels and good net new inflows, contributed to the growth in income.

Operating expenses increased 25% (£241m) to £1,192m (2006: £951m) as a result of significant investment in key product and channel growth initiatives and in infrastructure as well as growth in the underlying business. Operating expenses included charges of £80m (2006: £nil) related to selective support of liquidity products managed in the US. The cost:income ratio rose five percentage points to 62% (2006: 57%).

Headcount increased 700 to 3,400 (2006: 2,700). Headcount increased in all geographical regions and across product groups and the support functions, reflecting continued investment to support further growth.

Total assets under management increased 13% (£117bn) to £1,044bn (2006: £927bn) comprising £42bn of net new assets, £12bn attributable to the acquisition of Indexchange Investment AG (Indexchange), £66bn of favourable market movements and £3bn of adverse exchange movements. In US Dollar terms assets under management increased 15% (US\$265bn) to US\$2,079bn (2006: US\$1,814bn), comprising US\$86bn of net new assets, US\$23bn attributable to acquisition of Indexchange, US\$127bn of favourable market movements and US\$29bn of positive exchange rate movements.

Investment Banking and Investment Management Barclays Wealth

Barclays Wealth focuses on high net worth, affluent and intermediary clients worldwide. We are the UK's leading wealth manager by client assets. We have 7,900 staff in over 20 countries and have total client assets of £145bn. We have offices across the Americas following the acquisition of Lehman Brothers Private Investment Management in 2008.

What we do

Barclays Wealth provides international and private banking, fiduciary services, investment management, and brokerage.

We work closely with all other parts of the Group to leverage synergies from client relationships and product capabilities, for example, offering world-class investment solutions with institutional quality products and services from Barclays Capital and Barclays Global Investors.

Performance

2008/07

Barclays Wealth profit before tax grew 119% (£364m) to £671m (2007: £307m). Profit before gains on disposal increased 12% (£38m) driven by solid income growth and tight cost control, offset by an increase in impairment charges. The closed life assurance business contributed profit before tax of £104m (2007: £110m) prior to its sale in October 2008, which generated a profit on disposal of £326m.

Income increased 3% (£37m) to £1,324m (2007: £1,287m).

Net interest income increased 13% (£55m) to £486m (2007: £431m) reflecting strong growth in both customer deposits and lending. Average deposits grew 19% to £37.2bn (2007: £31.2bn). Average lending grew 31% to £9.7bn (2007: £7.4bn). The assets margin decreased seven basis points to 1.04% (2007: 1.11%) reflecting changes in the product mix. The liabilities margin reduced by eight basis points to 0.95% (2007: 1.03%) driven by changes in the product mix and compression of margins as interest rates reduced during the second half of the year.

Net fee and commission income decreased 3% (£19m) to £720m (2007: £739m) driven by falling equity markets partially offset by increased client assets.

Net investment income, net premiums from insurance contracts and net claims and benefits paid on insurance contracts related wholly to the closed life assurance business. Their overall net impact on income increased marginally to £103m (2007: £95m). The decrease in net investment income, driven by a fall in the value of unit linked contracts and reduced premium income, were offset by reduced net claims and benefits as a result of a fall in the value of linked and non-linked liabilities.

Impairment charges increased £37m to £44m (2007: £7m) from a very low base. This increase reflected both the substantial increase in the loan book over the last three years and the impact of the current economic environment on client liquidity and collateral values.

Operating expenses decreased 4% to £935m (2007: £973m) with significant cost savings including a reduction in performance related costs partially offset by increased expenditure in upgrading technology and operating platforms and continued hiring of client-facing staff.

Highlights

£1,324m **£671m**

Income

Profit before tax

Performance indicators

Total client assets £bn

Average net income generated per member of staff £000

Key facts

	2008	2007	2006
Total client assets	£145.1bn	£132.5bn	£116.1bn

Total client assets, comprising customer deposits and client investments, increased 10% (£12.6bn) to £145.1bn (2007: £132.5bn) with underlying net new asset inflows of £3.2bn and the acquisition of the Lehman Brothers North American businesses offsetting the impact of market and foreign exchange movements and the sale of the closed life assurance book.

2007/06

Barclays Wealth profit before tax showed very strong growth of 25% (£62m) to £307m (2006: £245m). Performance was driven by broadly based income growth, reduced redress costs and tight cost control, partially offset by additional volume-related costs and increased investment in people and infrastructure to support future growth.

Income increased 11% (£127m) to £1,287m (2006: £1,160m).

Net interest income increased 10% (£39m) to £431m (2006: £392m), reflecting strong growth in both customer deposits and lending. Average deposits grew 13% to £31.2bn (2006: £27.7bn). Average lending grew 35% to £7.4bn (2006: £5.5bn), driven by increased lending to high net worth, affluent and intermediary clients. Assets margin increased three basis points to 1.11% (2006: 1.08%), reflecting changes in the product mix. The liabilities margin reduced by seven basis points to 1.03% (2006: 1.10%) driven by competitive pricing of products.

Net fee and commission income grew 10% (£65m) to £739m (2006: £674m). This reflected growth in client assets and higher transactional income from increased sales of investment products and solutions.

Principal transactions decreased £101m to £55m (2006: £156m) as a result of lower growth in the value of unit linked insurance contracts.

Net premiums from insurance contracts reduced £15m to £195m (2006: £210m). These reductions were offset by a lower charge for net claims and benefits incurred under insurance contracts of £152m (2006: £288m).

Operating expenses increased 7% to £973m (2006: £913m) with greater volume-related costs and a significant increase in investment partially offset by efficiency gains and lower customer redress costs of £19m (2006: £67m). Ongoing investment programmes included increased hiring of client-facing staff and improvements to infrastructure with the upgrade of technology and operations platforms. The cost:income ratio improved three percentage points to 76% (2006: 79%).

Total client assets, comprising customer deposits and client investments, increased 14% (£16.4bn) to £132.5bn (2006: £116.1bn), reflecting strong net new asset inflows and the acquisition of Walbrook, an independent fiduciary services company, which completed on 18th May 2007.

Head office functions and other operations

Head office functions and other operations comprises:

- Head office and central support functions
- Businesses in transition
- Inter-segment adjustments

What we do

Head office and central support functions comprises the following areas: Executive Management, Finance, Treasury, Corporate Affairs, Human Resources, Strategy and Planning, Internal Audit, Legal, Corporate Secretariat, Property, Tax, Compliance and Risk. Costs incurred wholly on behalf of the businesses are recharged to them.

Businesses in transition principally relate to certain lending portfolios that are centrally managed with the objective of maximising recovery from the assets.

Performance

2008/07

Head office functions and other operations loss before tax increased £430m to £858m (2007: £428m).

Total income decreased £185m to a loss of £377m (2007: loss of £192m).

Group segmental reporting is performed in accordance with Group accounting policies. This means that inter-segment transactions are recorded in each segment as if undertaken on an arm's length basis. Adjustments necessary to eliminate inter-segment transactions are included in Head office functions and other operations. The impact of such inter-segment adjustments increased £32m to £265m (2007: £233m). These adjustments included internal fees for structured capital market activities of £141m (2007: £169m) and fees paid to Barclays Capital for debt and equity raising and risk management advice of £151m (2007: £65m), both of which reduce net fees and commission income.

Net interest income increased £54m to £182m (2007: £128m) primarily due to a consolidation adjustment between net interest income and trading income required to match the booking of certain derivative hedging transactions between different segments in the Group. This resulted in a £111m increase in net interest income to £143m (2007: £32m) with an equal and opposite decrease in principal transactions.

This was partially offset by an increase in costs in central funding activity due to the money market dislocation, in particular LIBOR resets.

Principal transactions loss increased £135m to £218m (2007: £83m) reflecting the £111m increase in consolidation reclassification adjustment on derivative hedging transactions.

Impairment charges increased £27m to £30m (2007: £3m) mainly reflecting losses on Floating Rate Notes held for hedging purposes.

Operating expenses increased £217m to £451m (2007: £234m). The main drivers of this increase were: a £101m charge for the Group's share of levies that will be raised by the UK Financial Services Compensation Scheme; £64m costs relating to an internal review of Barclays compliance with US economic sanctions; the non-recurrence of a £58m break fee relating to the ABN Amro transaction; lower rental income and lower proceeds on property sales.

2007/06

Head office functions and other operations loss before tax increased £169m to £428m (2006: £259m).

Group segmental reporting is performed in accordance with Group accounting policies. This means that inter-segment transactions are recorded in each segment as if undertaken on an arm's length basis. Adjustments necessary to eliminate inter-segment transactions are included in Head office functions and other operations.

The impact of such inter-segment adjustments increased £86m to £233m (2006: £147m). These adjustments included internal fees for structured capital market activities of £169m (2006: £87m) and fees paid to Barclays Capital for debt and equity raising and risk management advice of £65m (2006: £23m), both of which increased net fee and commission expense in Head office. The impact on the inter-segment adjustments of the timing of the recognition of insurance commissions included in Barclaycard was a reduction in Head office income of £9m (2006: £44m). This net reduction was reflected in a decrease in net fee and commission income of £162m (2006: £184m) and an increase in net premium income of £153m (2006: £140m).

Principal transactions decreased to a loss of £83m (2006: £42m profit). 2006 included a £55m profit from a hedge of the expected Absa foreign currency earnings.

Operating expenses decreased £35m to £234m (2006: £269m). The primary driver of this decrease was the receipt of a break fee relating to the ABN AMRO transaction which, net of transaction costs, reduced expenses by £58m. This was partially offset by lower rental income and lower proceeds on property sales.

Sustainability and Barclays

At Barclays, we recognise that our sustainability values have an increased importance in the current financial climate. We are focused on: supporting our existing customers; being a bank that welcomes all potential customers; being an equal opportunity employer; our commitment to climate change; and ensuring we behave at all times as a responsible global citizen.

Doing this effectively helps us to reduce our risk and positions us well to capture commercial opportunities arising from the global transition towards a more sustainable future.

Developing our strategic framework

To measure our success in integrating sustainability into our business we have addressed the broad sustainability agenda through five key themes:

- Customers and Clients
- Inclusive Banking
- Diversity and Our People
- Environment
- Responsible Global Citizenship

These themes resonate in our businesses, provide a platform for action, and give us a clear purpose and direction. Implementation is driven by actionable goals and robust performance measurement.

We manage and report our progress on the sustainability topics of most significance to our business and our stakeholders. We have determined this in part through:

- our research initiatives and partnerships
- dialogue with our stakeholders including customers, investors governments, non-governmental organisations, consumer groups, and journalists across our markets globally
- internal and external focus groups including hosting consumer roundtables in the UK.

Stakeholder insight and feedback on our sustainability agenda is vital, and encourages us to be open and transparent about the issues our stakeholders are concerned about.

Measuring progress

We aim to measure and monitor our sustainability progress both internally and externally. In 2008, we developed a framework for regular progress reports to the Group Executive Committee and the Board. It provides consistent tracking of our progress by sustainability theme and Business Unit.

Barclays participates in a number of external indices, forums and initiatives which help to measure our progress including the Dow Jones Sustainability Index and FTSE4Good. In 2008, Barclays ranked joint first in the Carbon Disclosure Project's Leadership Index.

Customers and clients

In 2008, amid widespread uncertainty in financial markets and the wider global economy, it was vital to stay close to our clients and customers, who we recognise have a choice where they bank.

During the year, we worked to help our customers and clients cope with the challenging economic circumstances. Our record of lending responsibly has allowed us to continue mortgage lending in the UK, increasing our share of net new lending from 8% in 2007 to 36% in 2008.

We increased lending to UK SMEs by 6% to a total of £1.5bn. We also provided support to small businesses in the UK and South Africa and also made significant investment in the Barclays Business Support team which is dedicated to helping business customers in financial difficulty in the UK.

In addition, we have committed to lend an additional 10% (£1.5bn) to SMEs in the UK by the end of 2009. We continue to act on customer and client feedback to develop appropriate products and services to meet different needs.

Inclusive banking

For Barclays, inclusive banking means helping those who are excluded from the financial system to join and benefit from it.

We have dedicated accounts for people on low incomes across several countries in Africa. In 2008, these basic accounts made up 27% of our total current and savings accounts in Africa.

Absa, which has 10 million customers, is now the market leader for low income customers in South Africa – those earning less than R3,000 (£200) a month – with a market share of 33%.

We continued to support better access to financial products and services in the UK through our basic-level Cash Card Account, which is now held by more than 730,000 customers, and through partnerships with community finance organisations and charities which help excluded and vulnerable people in society.

In March 2008, Barclays launched the 'Hello Money' service in India which allows customers to carry out banking transactions easily and securely over their mobile phones. Hello Money is already making a significant impact in giving access to financial services for people in India's rural areas.

Diversity and Our People

Barclays aims to provide a safe working environment in which employees are treated fairly and with respect, encouraged to develop, and rewarded on the basis of individual performance.

Barclays Capital has traded more than 1 billion tonnes of carbon credits with a notional value of over £20bn

In 2008, Antony Jenkins, CEO Barclaycard was appointed Diversity and Inclusion Executive Champion to drive our diversity agenda across Global Retail and Commercial Banking. Initiatives in 2008 included establishing the requirement that every senior executive has a diversity objective linked to their performance goals.

In 2009, we intend to extend our Women's Leadership Programme, aimed at developing talented women employees, across all 15 countries in our GRCB – Emerging Markets business with secondments of between 3 and 12 months.

Environment

We seek to minimise our environmental impact through reducing Barclays energy, water and waste footprints and managing the risks and opportunities associated with climate change.

Businesses have a vital role to play in managing and mitigating climate change. At Barclays, we recognise that we have an impact on the environment both directly through our own operations, and indirectly through our supply chain and corporate lending. We monitor and manage both sets of impacts.

In 2008, Barclays set environmental targets that apply to global operations. We will measure our performance over three years from 2009 to 2011 against a 2008 baseline.

The targets are to reduce:

- CO₂ emissions by 6% per employee, achieving an average 2% reduction per year
- energy use from buildings (excluding data centres) by 6% per employee, achieving an average 2% reduction per year
- water use by 6% per employee, achieving an average 2% reduction per year.

We made our UK and European operations carbon neutral by offsetting emissions from energy use and travel. We are on track to make our global banking operations carbon neutral by the end of 2009.

Environmental and social risk

The majority of the environmental and social risks associated with our business are indirect. These impacts arise through business relationships, including those with our supply chain and those with our clients through financing activities.

We apply our Environmental and Social Impact Assessment policy (ESIA) to projects that we are considering financing. In 2008, a total of 31 project finance deals were assessed against the Equator Principles, a set of social and environmental criteria adopted by many banks. In addition, the Environmental Risk Management team assessed 229 non-project finance transactions.

We continue to assess our environmental and social impact beyond the project finance remit of the Equator Principles and are working to include climate change and human rights considerations in these assessments.

Responsible global citizenship

We acknowledge and accept that we have an obligation to be a responsible global citizen, and our sustainability efforts help us to achieve this. This means managing our business and supply chain to improve our social, economic and environmental impact, and doing business ethically.

Community Investment

Investing in the communities in which we operate is an integral part of Barclays sustainability strategy. During 2008, we maintained our levels of investment in communities despite the challenging conditions. We invested £52.2m and more than 57,000 colleagues in 31 countries were involved in volunteering, fundraising and regular giving. In addition, Barclays launched a three-year global community investment partnership with UNICEF, the leading children's organisation, in which we committed to invest £5m.

Human Rights and Barclays

In June 2008, we refined our statement on human rights (first introduced in 2004) which outlines the approach we take to human rights through our three main areas of impact – as an employer, as a provider of financial services to customers and clients, and as a purchaser of goods and services from suppliers. We aim to operate in accordance with the:

- Universal Declaration of Human Rights
- OECD Guidelines for Multinational Enterprises
- International Labour Organisation's Core Conventions.

Barclays is active in developing the global business and human rights agenda through our membership of two organisations – the Business Leaders' Initiative on Human Rights, launched in 2003 of which we are a founder member, and United Nations Environment Programme Finance Initiative (UNEP FI), for which we co-chair the Human Rights Workstream.

We extended the guidance provided to our employees on human rights in 2008 to include access to an online tool for front-line lending managers, which assists in identifying and mitigating human rights risks.

Supply chain

We work closely with our suppliers to help them manage their own impacts and ensure they share our commitment to sustainability. Our Group-wide sourcing process includes criteria for measuring and assessing our suppliers' sustainability. Tenders for supplies deemed to have a potentially high sustainability impact or risk, such as print or corporate wear, require suppliers to complete our sustainable supply chain questionnaire on their sustainability impact, policies and management processes.

During 2008, we continued to engage directly with our suppliers on sustainability, both as part of our ongoing supplier relationships and to address specific issues such as reducing their carbon emissions.

31 project finance deals were assessed against the Equator Principles

Barclays aims to provide a safe working environment in which employees are treated fairly and with respect, encouraged to develop, and rewarded on the basis of individual performance. We are committed to ensuring equality to all employees on the basis of merit. Discrimination, bullying or harassment of any kind is not tolerated.

Our Guiding Principles set out the values that govern how we act. They are:

- i) Winning together – Doing what's right for Barclays, our teams and our colleagues, to achieve collective and individual success.
- ii) Best people – Developing and upgrading talented colleagues and differentiating rewards
– Doing what's needed to ensure a leading position in the global financial services industry.
- iii) Customer and client focus – Understanding what our customers and clients want and need
– And then serving them brilliantly.
- iv) Pioneering – Driving new ideas, especially those that make us profitable and improve control
– Improving operational excellence
– Adding diverse skills to stimulate new perspectives and bold steps
- v) Trusted – Being trusted is the bedrock of a successful bank
– Acting with the highest levels of integrity to retain the trust of our customers, external stakeholders and our colleagues
– Taking full responsibility for our decisions and actions.

Global governance

Barclays manages its people through these Guiding Principles in a devolved manner. To maintain the right balance between overall control and effective local decision making we have established governance frameworks which are overseen by the Group Operational Committee, and compliance with them is monitored by the Group Human Resources Risk Committee.

Employee relations

Barclays recognises and works constructively with 30 employee representative organisations throughout the world. Employee consultations on significant operational changes are carried out in accordance with local legislation.

Our employee opinion surveys

Barclays businesses conduct employee opinion surveys, to suit the needs of each business. We benchmark the findings against other global financial services organisations and high-performing organisations, and create action plans to address any areas of concern.

Occupational health and safety

Barclays manages health and safety at a local level under the requirements of the health and safety governance framework.

Key data on health and safety is reported regularly to the Board HR and Remuneration Committee.

Training and educating our people

Developing both existing and new employees is key to our future prosperity. We undertake this through formal and informal training and education, including mandatory training required by regulatory bodies and detailed on-the-job training and development.

The following information sets forth certain risk factors that the Group believes could cause its actual future results to differ materially from expected results. However, other factors could also adversely affect the Group results and so the factors discussed in this report should not be considered to be a complete set of all potential risks and uncertainties.

Business conditions and general economy

The profitability of Barclays businesses could be adversely affected by the worsening of general economic conditions in the United Kingdom, globally or in certain individual markets such as the United States, Spain or South Africa. Factors such as interest rates, inflation, investor sentiment, the availability and cost of credit, foreign exchange risk, creditworthiness of counterparties, the liquidity of the global financial markets and the level and volatility of equity prices could significantly affect the Group's customers' activity levels and financial position. For example:

- the current economic downturn or significantly higher interest rates or continued lack of credit availability to the Group's customers could adversely affect the credit quality of the Group's on-balance sheet and off-balance sheet assets by increasing the risk that a greater number of the Group's customers and counterparties would be unable to meet their obligations;
- a market downturn or further worsening of the economy could cause the Group to incur further mark to market losses in its trading portfolios;
- a further decline in the value of Sterling relative to other currencies could increase risk weighted assets and therefore the capital requirements of the Group;
- a further market downturn could reduce the fees the Group earns for managing assets. For example, a downturn in trading markets could affect the flows of assets under management; and
- a further market downturn would be likely to lead to a decline in the volume of transactions that the Group executes for its customers and, therefore, lead to a decline in the income it receives from fees and commissions and interest.

Current market volatility and recent market developments

The global financial system has been experiencing difficulties since August 2007 and financial markets have deteriorated dramatically since the bankruptcy filing of Lehman Brothers in September 2008. Despite measures taken by the United Kingdom and United States governments and the European Central Bank and other central banks to stabilise the financial markets, the volatility and disruption of the capital and credit markets have continued. Together with the significant declines in the property markets in the United Kingdom, the United States, Spain and other countries, these events over the past two years have contributed to significant write-downs of asset values by financial institutions, including government-sponsored entities and major retail, commercial and investment banks. These write-downs have caused many financial institutions to seek additional capital, to merge with larger and stronger institutions, to be nationalised and, in some cases, to fail. Reflecting concern about the stability of the financial markets generally and the strength of counterparties, many lenders and institutional investors have substantially reduced and, in some cases, stopped their funding to borrowers, including other financial institutions.

While the capital and credit markets have been experiencing difficulties for some time, the volatility and disruption reached unprecedented levels in the final months of 2008 and economic activity started to contract in many of the economies in which the Group operates. These conditions have produced downward pressure on stock prices and credit capacity for certain issuers. The resulting lack of credit, lack of confidence in the financial sector, increased volatility in the financial markets and reduced business activity could continue to materially and adversely affect the Group's business, financial condition and results of operations.

Credit risk

Credit risk is the risk of suffering financial loss, should any of the Group's customers, clients or market counterparties fail to fulfil their contractual obligations to the Group. The credit risk that the Group faces arises mainly from wholesale and retail loans and advances. However, credit risk may also arise where the downgrading of an entity's credit rating causes the fair value of the Group's investment in that entity's financial instruments to fall.

In a recessionary environment, such as that ongoing in the United Kingdom, the United States and other economies, credit risk increases. Credit risk may also be manifested as country risk where difficulties may arise in the country in which the exposure is domiciled, thus impeding or reducing the value of the assets, or where the counterparty may be the country itself.

Another form of credit risk is settlement risk, which is the possibility that the Group may pay a counterparty but fail to receive the corresponding settlement in return. The Group is exposed to many different industries and counterparties in the normal course of its business, but its exposure to counterparties in the financial services industry is particularly significant. This exposure can arise through trading, lending, deposit-taking, clearance and settlement and many other activities and relationships. These counterparties include brokers and dealers, commercial banks, investment banks, mutual and hedge funds and other institutional clients. Many of these relationships expose the Group to credit risk in the event of default of a counterparty and to systemic risk affecting its counterparties. Where the Group holds collateral against counterparty exposures, it may not be able to realise it or liquidate it at prices sufficient to cover the full exposures. Many of the hedging and other risk management strategies utilised by the Group also involve transactions with financial services counterparties. The failure of these counterparties to settle or the perceived weakness of these counterparties may impair the effectiveness of the Group's hedging and other risk management strategies.

The Group's credit risk governance structure, management and measurement methodologies, together with an analysis of exposures to credit risk is detailed in the 'Credit risk management' section on page 80 and the 'Credit Risk' note to the financial statements on page 264.

[Barclays Capital credit market exposures](#)

An analysis of Barclays Capital's credit market exposures is detailed on pages 106 to 118.

Market risk

Market risk is the risk that the Group's earnings or capital, or its ability to meet business objectives, will be adversely affected by changes in the level or volatility of market rates or prices such as interest rates, credit spreads, commodity prices, equity prices and foreign exchange rates. Market risk has increased due to the volatility of the current financial markets.

The main market risk arises from trading activities. Barclays is also exposed to market risk through non-traded interest rate risk and the pension fund.

The Group's market risk governance structure, management and measurement methodologies, together with an analysis of exposures to both traded and non-traded market risk is detailed in the 'Market risk management' section on page 119 and the 'Market Risk' note to the financial statements on page 278. Pension risk is analysed in note 30 on page 234.

The Group's future earnings could be affected by depressed asset valuations resulting from a deterioration in market conditions. Financial markets are sometimes subject to stress conditions where steep falls in asset values can occur, as demonstrated by recent events affecting asset backed CDOs and the US sub-prime residential mortgage market and which may occur in other asset classes during an economic downturn. Severe market events are difficult to predict and, if they continue to occur, could result in the Group incurring additional losses.

In 2007 and in 2008, the Group recorded material net losses on certain credit market exposures, including ABS CDO Super Senior exposures. As market conditions change, the fair value of these exposures could fall further and result in additional losses or impairment charges, which could have a material adverse effect on the Group's earnings. Such losses or impairment charges could derive from: a decline in the value of exposures; a decline in the ability of counterparties, including monoline insurers, to meet their obligations as they fall due; or the ineffectiveness of hedging and other risk management strategies in circumstances of severe stress.

Liquidity risk

This is the risk that the Group is unable to meet its obligations when they fall due as a result of customer deposits being withdrawn, cash requirements from contractual commitments, or other cash outflows, such as debt maturities. Such outflows would deplete available cash resources for client lending, trading activities and investments. In extreme circumstances, lack of liquidity could result in reductions in balance sheet and sales of assets, or potentially an inability to fulfil lending commitments. This risk is inherent in all banking operations and can be affected by a range of institution-specific and market-wide events including, but not limited to, credit events, merger and acquisition activity, systemic shocks and natural disasters. The Group's liquidity risk management has several components:

- intra-day monitoring to maintain sufficient liquidity to meet all settlement obligations;
- mismatch limits to control expected cash flows from maturing assets and liabilities;

- monitoring of undrawn lending commitments, overdrafts and contingent liabilities; and
- diversification of liquidity sources by geography and provider.

During periods of market dislocation, such as those currently ongoing, the Group's ability to manage liquidity requirements may be impacted by a reduction in the availability of wholesale term funding as well as an increase in the cost of raising wholesale funds. Asset sales, balance sheet reductions and the increasing costs of raising funding will affect the earnings of the Group.

In illiquid markets, the Group may decide to hold assets rather than securitising, syndicating or disposing of them. This could affect the Group's ability to originate new loans or support other customer transactions as both capital and liquidity are consumed by existing or legacy assets.

The Group's liquidity risk management and measurement methodologies are detailed in the 'Liquidity Risk Management' section on page 125 and the 'Liquidity Risk' note to the financial statements on page 282.

Capital risk

Capital risk is the risk that the Group has insufficient capital resources to:

- meet minimum regulatory capital requirements in the UK and in other jurisdictions such as the United States and South Africa where regulated activities are undertaken. The Group's authority to operate as a bank is dependent upon the maintenance of adequate capital resources;
- support its credit rating. A weaker credit rating would increase the Group's cost of funds;
- support its growth and strategic options.

During periods of market dislocation, increasing the Group's capital resources may prove more difficult or costly. Regulators have also recently increased the Group's capital targets and amended the way in which capital targets are calculated and may further do so in future. This would constrain the Group's planned activities and contribute to adverse impacts on the Group's earnings.

The Group's capital management objectives and processes are detailed in the 'Capital risk management' section on page 128.

Operational risk

Operational risk is the risk of direct or indirect losses resulting from human factors, external events, and inadequate or failed internal processes and

systems. Operational risks are inherent in the Group's operations and are typical of any large enterprise. Major sources of operational risk include operational process reliability, IT security, outsourcing of operations, dependence on key suppliers, implementation of strategic change, integration of acquisitions, fraud, human error, customer service quality, regulatory compliance, recruitment, training and retention of staff, and social and environmental impacts.

The Group's operational risk management and measurement methodologies are detailed in the 'Operational risk management' section on page 131.

Financial crime risk

Financial crime risk is a category of operational risk. It arises from the risk that the Group might fail to comply with financial crime legislation and industry laws on anti-money laundering or might suffer losses as a result of internal or external fraud, or might fail to ensure the security of personnel, physical premises and the Group's assets.

The Group's financial crime management and processes are detailed in the 'Financial crime risk management' section on page 134.

Regulatory compliance risk

Regulatory compliance risk arises from a failure or inability to comply fully with the laws, regulations or codes applicable specifically to the financial service industry. Non-compliance could lead to fines, public reprimands, damage to reputation, enforced suspension of operations or, in extreme cases, withdrawal of authorisations to operate.

In addition, the Group's businesses and earnings can be affected by the fiscal or other policies and other actions of various governmental and regulatory authorities in the United Kingdom, the European Union ('EU'), the United States, South Africa and elsewhere. All these are subject to change, particularly in the current market environment where recent developments in the global markets have led to an increase in the involvement of various governmental and regulatory authorities in the financial sector and in the operations of financial institutions. In particular, governmental and regulatory authorities in the United Kingdom, the United States and elsewhere are implementing measures to increase regulatory control in their respective banking sectors, including by imposing enhanced capital requirements or by imposing conditions on direct capital injections and funding. Any future regulatory changes may potentially restrict the Group's operations, mandate certain lending activity and impose other compliance costs. It is uncertain how the more rigorous regulatory climate will impact financial institutions, including the Group.

Areas where changes could have an impact include:

- the monetary, interest rate and other policies of central banks and regulatory authorities;
- general changes in government or regulatory policy that may significantly influence investor decisions in particular markets in which the Group operates;
- general changes in the regulatory requirements, for example, prudential rules relating to the capital adequacy framework and rules designed to promote financial stability and increase depositor protection;
- changes in competition and pricing environments;
- further developments in the financial reporting environment;
- differentiation amongst financial institutions by governments with respect to the extension of guarantees to customer deposits and the terms attaching to those guarantees; and
- implementation of, or costs related to, local customer or depositor compensation or reimbursement schemes.

Two specific matters that directly impact the Group are the Banking Act 2009 and the Financial Services Compensation Scheme:

Banking Act 2009

On 21st February 2009, the Banking Act 2009 came into force which provides a permanent regime to allow the FSA, the UK Treasury and the Bank of England (the 'Tripartite Authorities') to resolve failing banks in the UK. The Banking Act aims to balance the need to protect depositors and prevent systemic failure with the potentially adverse consequences that using powers to deal with those events could have on private law rights, and, as a consequence, wider markets and investor confidence.

These powers, which apply regardless of any contractual restrictions, include (a) power to issue share transfer orders pursuant to which there may be transferred to a commercial purchaser or Bank of England entity, all or some of the securities issued by a bank. The share transfer order can extend to a wide range of 'securities' including shares and bonds issued by a UK Bank (including Barclays Bank PLC) or its holding company (Barclays PLC) and warrants for such and (b) the power to transfer all or some of the property, rights and liabilities of the UK bank to a purchaser or Bank of England entity. In certain circumstances encumbrances and trusts can be over-reached. Power also exists to over-ride any default provisions in transactions otherwise affected by these powers. Compensation may be payable in the context of both share transfer orders and property appropriation. In the case of share transfer orders any compensation

will be paid to the person who held the security immediately before the transfer, who may not be the encumbrancer.

The Banking Act also vests power in the Bank of England to over-ride, vary or impose contractual obligations between a UK bank or its holding company and its former group undertakings (as defined in the Banking Act), for reasonable consideration, in order to enable any transferee or successor bank of the UK bank to operate effectively. There is also power for the Treasury to amend the law (save for a provision made by or under the Banking Act) by order for the purpose of enabling it to use the special resolution regime powers effectively, potentially with retrospective effect.

Financial Services Compensation Scheme

The Financial Services Compensation Scheme (the 'FSCS') was created under the Financial Services and Markets Act 2000 and is the UK's statutory fund of last resort for customers of authorised financial services firms. The FSCS can pay compensation to customers if a firm is unable, or likely to be unable, to pay claims against it. The FSCS is funded by levies on authorised UK firms such as Barclays Bank PLC. In the event that the FSCS raises funds from the authorised firms, raises those funds more frequently or significantly increases the levies to be paid by such firms, the associated costs to the Group may have a material impact on the Group's results of operations and financial condition.

Further details of specific matters that impact the Group are included in the 'Competition and regulatory matters' note to the financial statements on page 246.

Legal risk

The Group is subject to a comprehensive range of legal obligations in all countries in which it operates. As a result, the Group is exposed to many forms of legal risk, which may arise in a number of ways. Primarily:

- the Group's business may not be conducted in accordance with applicable laws around the world;
- contractual obligations may either not be enforceable as intended or may be enforced against the Group in an adverse way;
- the intellectual property of the Group (such as its trade names) may not be adequately protected; and
- the Group may be liable for damages to third parties harmed by the conduct of its business.

The Group faces risk where legal proceedings are brought against it. Regardless of whether such claims have merit, the outcome of legal proceedings is inherently uncertain and could result in financial loss.

Defending legal proceedings can be expensive and time-consuming and there is no guarantee that all costs incurred will be recovered even if the Group is successful. Although the Group has processes and controls to manage legal risks, failure to manage these risks could impact the Group adversely, both financially and by reputation.

Further details of the Group's legal proceedings are included in the 'Legal proceedings' note to the financial statements on page 245.

Insurance risk

Insurance risk is the risk that the Group will have to make higher than anticipated payments to settle claims arising from its long-term and short-term insurance businesses.

Further details of the Group's insurance assets and liabilities, including a sensitivity analysis of insurance contract liabilities, are included in the 'Insurance assets and liabilities' note to the financial statements on page 226.

Business risk

The Group devotes substantial management and planning resources to the development of strategic plans for organic growth and identification of possible acquisitions, supported by substantial expenditure to generate growth in customer business. If these strategic plans are not delivered as anticipated, the Group's earnings could grow more slowly or decline. In addition, potential sources of business risk include revenue volatility due to factors such as macroeconomic conditions, inflexible cost structures, uncompetitive products or pricing and structural inefficiencies.

Competition

The global financial services markets in which the Group operates are highly competitive. Innovative competition for corporate, institutional and retail clients and customers comes both from incumbent players and a steady stream of new market entrants, as well as recent consolidation among banking institutions in the United Kingdom, the United States and throughout Europe. The landscape is expected to remain highly competitive in all areas, which could adversely affect the Group's profitability if the Group fails to retain and attract clients and customers.

Tax risk

The Group is subject to the tax laws in all countries in which it operates, including tax laws adopted at an EU level. A number of double taxation agreements entered between two countries also impact on the taxation of the Group. Tax risk is the risk associated with changes in tax law or in the interpretation of tax law. It also includes the risk of changes in tax rates and the risk of failure to comply with procedures required by tax authorities. Failure to manage tax risks could lead to an additional tax charge. It could also lead to a financial penalty for failure to comply with required tax procedures or other aspects of tax law. If, as a result of a particular tax risk materialising, the tax costs associated with particular transactions are greater than anticipated, it could affect the profitability of those transactions.

The Group takes a responsible and transparent approach to the management and control of its tax affairs and related tax risk:

- tax risks are assessed as part of the Group's formal governance processes and are reviewed by the Executive Committee, Group Finance Director and the Board Risk Committee;
- the tax charge is also reviewed by the Board Audit Committee;
- the tax risks of proposed transactions or new areas of business are fully considered before proceeding;
- the Group takes appropriate advice from reputable professional firms;
- the Group employs high-quality tax professionals and provides ongoing technical training;
- the tax professionals understand and work closely with the different areas of the business;
- the Group uses effective, well-documented and controlled processes to ensure compliance with tax disclosure and filing obligations; and
- where disputes arise with tax authorities with regard to the interpretation and application of tax law, the Group is committed to addressing the matter promptly and resolving the matter with the tax authority in an open and constructive manner.

Barclays approach to risk management

This risk section outlines Barclays approach to risk management, as exemplified by the application of the Group’s Principal Risks Policy, determination of its Risk Appetite and governance around its Risk Methodologies, which cover its processes, measurement techniques and controls. In addition, we set out summary information and disclosure on our portfolios and positions.

Barclays approach to risk management involves a number of fundamental elements that drive our processes across the Group:

The **Principal Risks Policy** covers the Group’s main risk types, assigning responsibility for the management of specific risks, and setting out the requirements for control frameworks for all of the risk types. The individual control frameworks are reinforced by a robust system of review and challenge, and a governance process of aggregation and broad review by businesses and risk across the Group (page 78).

The Group’s **Risk Appetite** sets out the level of risk that the Board is willing to take in pursuit of its business objectives. This is expressed as the Group’s appetite for earnings volatility across all businesses from credit, market, and operational risk. It is calibrated against our broad financial targets, including income and impairment targets, dividend coverage and capital levels. It is prepared each year as part of the Group’s Medium-Term Planning process, and combines a top-down view of the Group’s risk capacity with a bottom-up view of the risk profile requested and recommended by each business. This entails making business plan adjustments as necessary to ensure that our Medium-Term Plan creates a risk profile that meets our Risk Appetite (page 78).

Barclays **Risk Methodologies** include systems that enable the Group to measure, aggregate and report risk for internal and regulatory purposes. As an example, our credit grading models produce Internal Ratings through internally derived estimates of default probabilities. These measurements are used by management in an extensive range of decisions, from credit grading, pricing and approval to portfolio management, economic capital allocation and capital adequacy processes (page 79).

Risk management is a fundamental part of Barclays business activity and an essential component of its planning process. To keep risk management at the centre of the executive agenda, it is embedded in the everyday management of the business.

Barclays ensures that it has the functional capacity to manage the risk in new and existing businesses. At a strategic level, our risk management objectives are:

- To identify the Group’s material risks and ensure that business profile and plans are consistent with risk appetite.
- To optimise risk/return decisions by taking them as closely as possible to the business, while establishing strong and independent review and challenge structures.
- To ensure that business growth plans are properly supported by effective risk infrastructure.
- To manage risk profile to ensure that specific financial deliverables remain possible under a range of adverse business conditions.
- To help executives improve the control and co-ordination of risk taking across the business.

In pursuit of these objectives, Group Risk breaks down risk management into five discrete processes: direct, assess, control, report, and manage/challenge (see panel below).

Process	Activity
Direct	<ul style="list-style-type: none"> – Understand the principal risks to achieving Group strategy. – Establish Risk Appetite. – Establish and communicate the risk management framework including responsibilities, authorities and key controls.
Assess	<ul style="list-style-type: none"> – Establish the process for identifying and analysing business-level risks. – Agree and implement measurement and reporting standards and methodologies.
Control	<ul style="list-style-type: none"> – Establish key control processes and practices, including limit structures, impairment allowance criteria and reporting requirements. – Monitor the operation of the controls and adherence to risk direction and limits. – Provide early warning of control or appetite breaches. – Ensure that risk management practices and conditions are appropriate for the business environment.
Report	<ul style="list-style-type: none"> – Interpret and report on risk exposures, concentrations and risk-taking outcomes. – Interpret and report on sensitivities and Key Risk Indicators. – Communicate with external parties.
Manage and Challenge	<ul style="list-style-type: none"> – Review and challenge all aspects of the Group’s risk profile. – Assess new risk-return opportunities. – Advise on optimising the Group’s risk profile. – Review and challenge risk management practices.

Barclays approach to risk management

Organisation and structure

Responsibility for risk management resides at all levels within the Group, from the Executive down through the organisation to each business manager and risk specialist. Barclays distributes these responsibilities so that risk/return decisions are taken at the most appropriate level; as close as possible to the business, and subject to robust and effective review and challenge.

Every business manager is accountable for managing risk in his or her business area; they must understand and control the key risks inherent in the business undertaken. Each business area also employs risk specialists to provide an independent control function and to support the development of a strong risk management environment. This functional approach to risk management is built on formal control processes that rely on individual responsibility and independent oversight, as well as challenge through peer reviews.

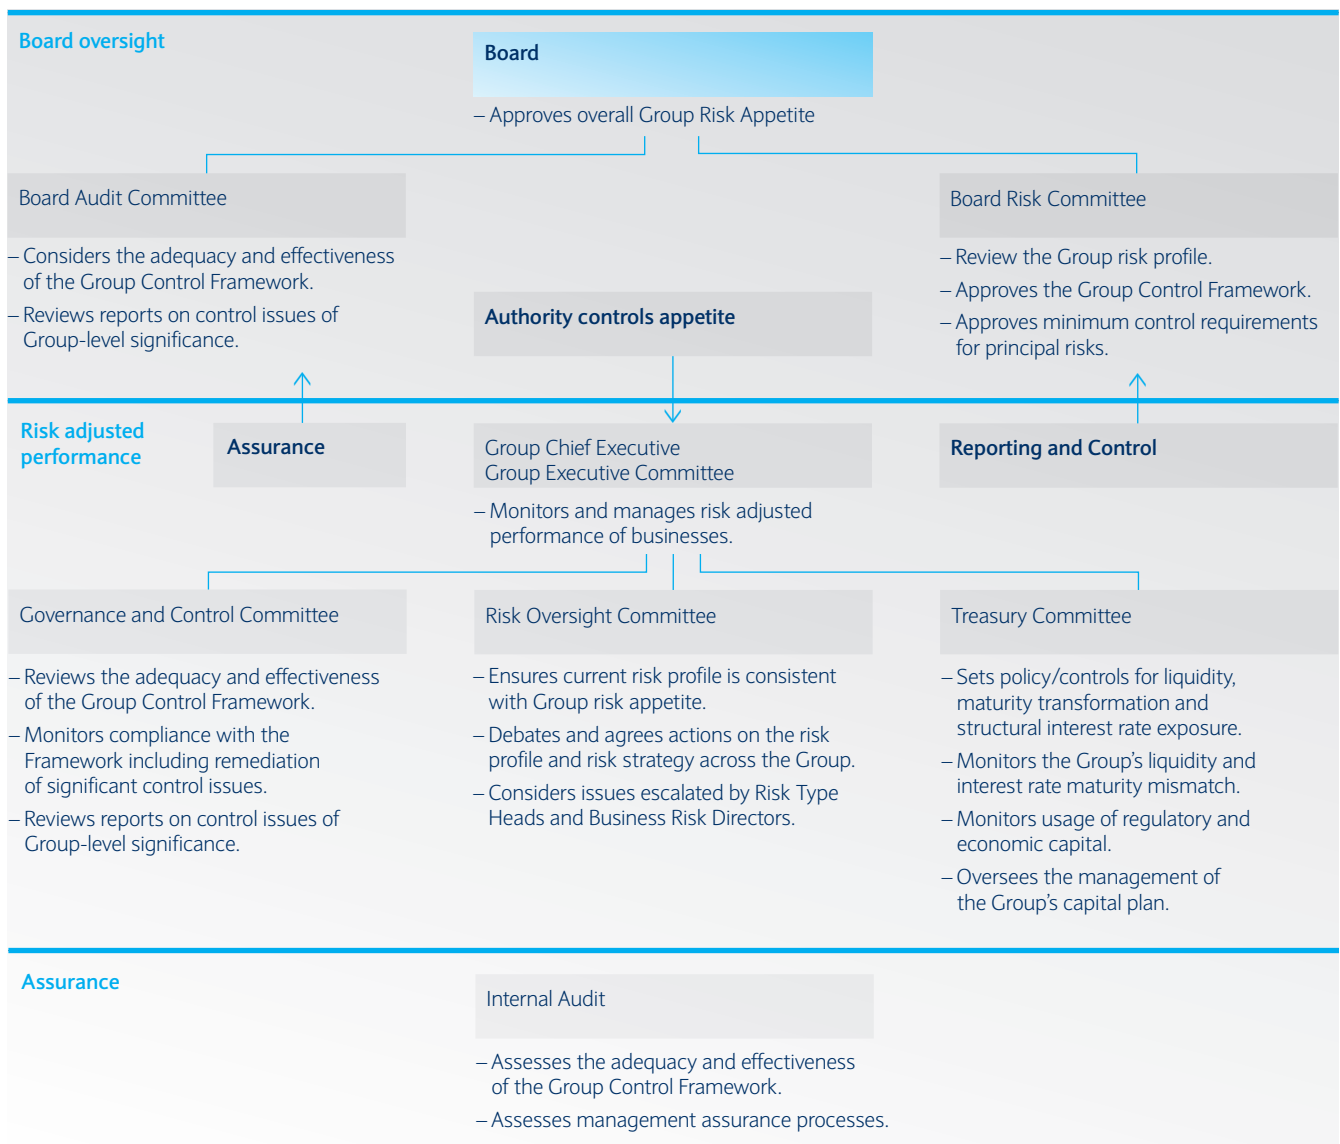

The Board approves Risk Appetite and the Board Risk Committee monitors the Group's risk profile against this agreed appetite. Business Heads are responsible for the identification and management of risk in their businesses. The Group Risk Director, under delegated authority from the Group Chief Executive and Group Finance Director, has responsibility for ensuring effective risk management and control.

The Committees shown below receive regular and comprehensive reports. The Board Risk Committee receives quarterly reports on the Group's risk profile and forward risk trends (for further information on the membership and activities of the Board Risk Committee, see page 166). The Board Audit Committee receives quarterly reports on control issues of significance and half-yearly impairment allowances and regulatory reports. See page 163 for additional details on the membership and activities of the Board Audit Committee. Both Board and Audit Committees also receive reports dealing in more depth with specific issues relevant at the time. The proceedings of both Committees are reported to the full Board, which also receives a concise quarterly risk report. Internal Audit supports both Committees by attendance and/or the provision of quarterly reports resulting from its work on governance, risk and control issues of significance. The Board Audit Committee reviews and approves Internal Audit's plans and resources, and evaluates the effectiveness of Internal Audit.

An assessment by external advisers is also carried out periodically.

In addition to the Committees shown in the chart, there is a Brand and Reputation Committee reviewing emerging issues with potentially significant reputational impact.

Governance structure at Group level

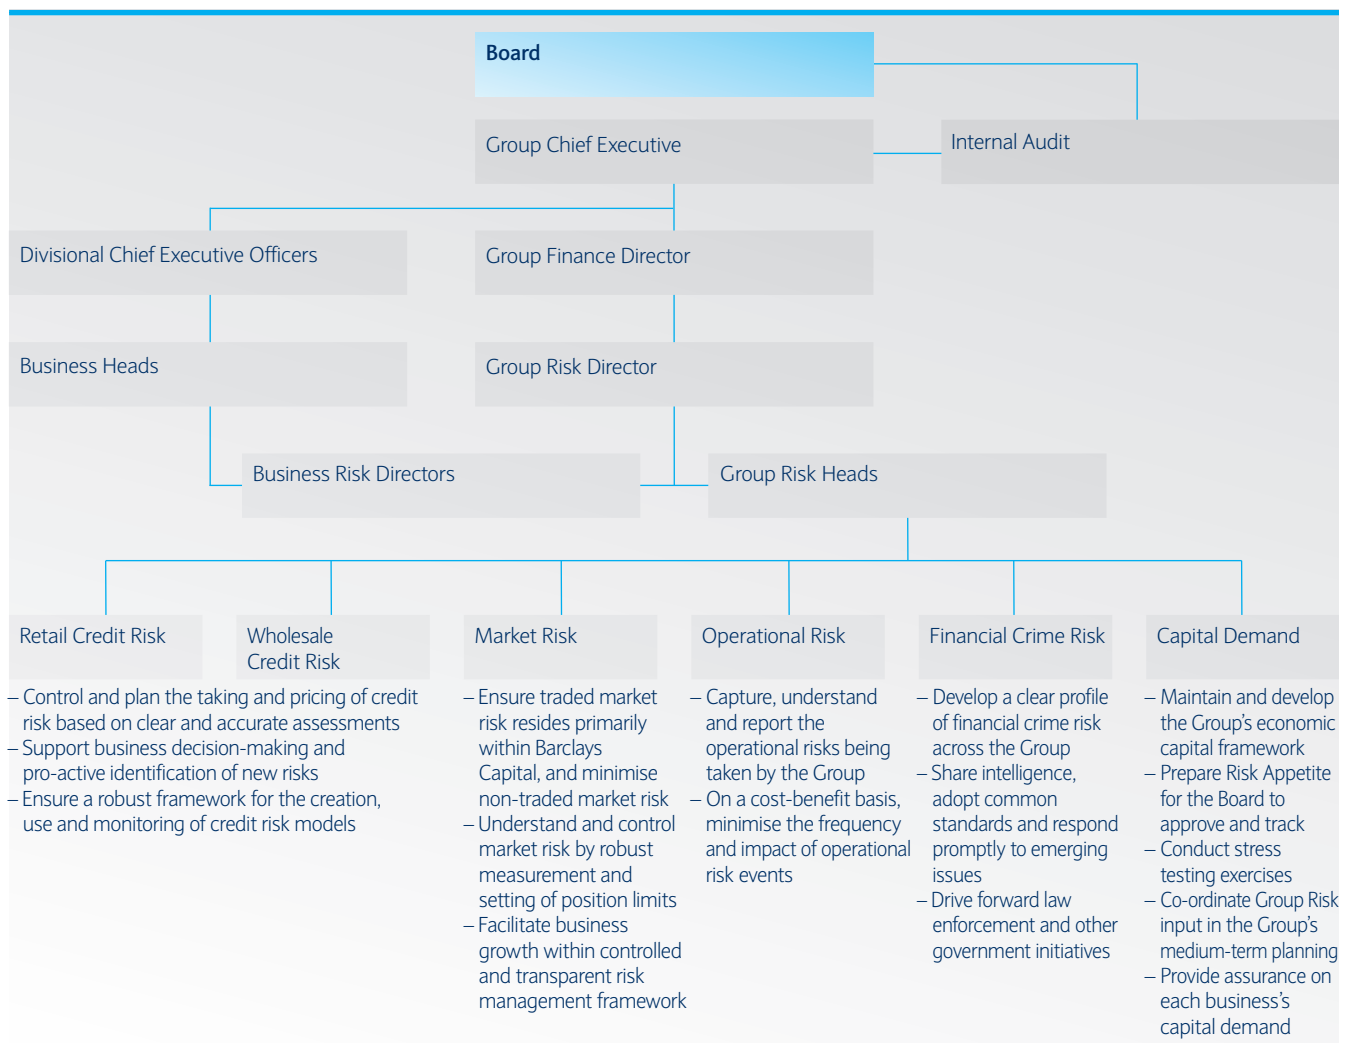

The Group Risk Director has overall day to day accountability for risk management. Reporting to the Group Risk Director are Group Risk Heads for Retail Credit Risk, Wholesale Credit Risk, Market Risk, Operational Risk, Financial Crime Risk and Capital Demand. Along with their teams, they are responsible for establishing a risk control framework and risk oversight at Group level. This core team liaises with each business as part of the monitoring and management processes.

Each business has an embedded risk management team reporting to a Business Risk Director who reports to the Group Risk Director. The risk management teams assist Group Risk in the formulation of Group Risk policy and its implementation across the businesses.

Business risk teams are responsible for assisting Business Heads in the identification and management of their business risk profiles and for implementing appropriate controls. The functional coverage of risk responsibilities is illustrated in the diagram below.

Internal Audit is responsible for the independent review of risk management and the control environment.

To support risk taking, Barclays has continued to strengthen the independent and specialised risk teams in each of its businesses, supported by matching teams at Group level, acting in both a consultancy and oversight capacity. As a prerequisite to business growth plans, it has made the recruitment, development and retention of risk professionals a priority.

Barclays approach to risk management

Key elements

Principal Risks

The Board is responsible for the Group Internal Control and Assurance Framework ('GICAF'). As part of the GICAF, it approves the Principal Risks Policy, which sets out responsibilities for the management of the Group's most significant risk exposures. The Board oversees the operating effectiveness of the Principal Risks Policy through the regular review of reports on the Group's material risk exposures and controls.

The Group's risk categorisation comprises 17 risk categories ('Level 1'), 13 of which are known as Principal Risks. Each Principal Risk is owned by a senior individual at the Group level, who liaises with Principal Risk owners within Business Units and Group Centre Functions. The 17 risk categories are shown in the panel below.

Each Group Principal Risk Owner ('GPRO') is responsible for setting minimum control requirements for their risk and for overseeing the risk and control performance across the Group. Group control requirements (e.g. Group Policies/Processes/Committee oversight) for each of these risks are defined, in consultation with Business Units, and communicated and maintained by the GPRO.

Implementation of the control requirements for each Principal Risk provides each Business Unit or Group Centre Function with the foundation of its system of internal control for that particular risk. This will usually be built upon in more detail, according to the circumstances of each Business Unit, to provide a complete and appropriate system of internal control.

The specific controls for individual Principal Risks are supplemented by generic risk management requirements. These requirements are articulated as the Group's Operational Risk Management Framework (see page 130) and include policies on:

- Internal Risk Event Identification and Reporting
- Risk and Control Assessment
- Key Indicators
- Key Risk Scenarios

Business Unit and Group Centre Function Heads are responsible for maintaining ongoing assurance that the controls they have put in place to manage the risks to their business objectives are operating effectively. They are required to undertake a formal six-monthly review of assurance information. These reviews support the regulatory requirement for the Group to make a statement about its system of internal control (the 'Turnbull' statement), in the Annual Report and Accounts.

Risk Appetite

Risk Appetite is the level of risk the Board of Barclays chooses to take in pursuit of its strategic objectives, recognising a range of possible outcomes as business plans are implemented. Barclays framework, approved by the Board Risk Committee, combines a top-down view of its capacity to take risk with a bottom-up view of the business risk profile requested and recommended by each business area.

To determine this acceptable level of risk, management estimates the potential earnings volatility from different businesses under various scenarios.

This annual setting of Risk Appetite considers the Bank's ability to support business growth, desired dividend payout levels and capital ratio targets. If the projections entail too high a level of risk, management will challenge each area to find new ways to rebalance the business mix to incur less risk on a diversified basis. Performance against Risk Appetite is measured and reported to the Executive and Board regularly throughout the year. Barclays believes that this framework enables it to:

- Improve risk and return characteristics across the business
- Meet growth targets within an overall risk appetite and protect the Group's performance
- Improve management confidence and debate regarding our risk profile
- Improve executive management control and co-ordination of risk-taking across businesses
- Identify unused risk capacity, and thus highlight profitable opportunities.

The Risk Appetite framework considers credit, market and operational risk and is applied using two perspectives: 'financial volatility' and 'mandate and scale'.

Financial Volatility is the level of potential deviation from expected financial performance that Barclays is prepared to sustain at relevant points on the risk profile. It is established with reference to the strategic objectives and to the business plans of the Group, including the achievement of annual financial targets, payment of dividends, funding of capital growth and maintenance of acceptable capital ratios and our credit rating. The portfolio is analysed in this way at four representative levels:

- Expected performance (including the average credit losses based on measurements over many years)
- A level of loss that corresponds to moderate increases in market, credit or operational risk from expected levels
- A more severe level of loss which is much less likely
- An extreme but highly improbable level of loss which is used to determine the Group's economic capital.

These potentially larger but increasingly less likely levels of loss are illustrated in the Risk Appetite concepts chart below. The Mandate and Scale framework is a formal review and control of our business activities to ensure that they are within our mandate (i.e. aligned to the expectations of external stakeholders) and are of an appropriate scale (relative to the risk and reward of the underlying activities). Appropriate assurance is achieved by using limits and triggers to avoid concentrations and operational risks which could lead to unexpected losses of a scale that would result in a disproportionate fall in Barclays market capitalisation.

Taken as a whole, the Risk Appetite framework provides a basis for the allocation of risk capacity to each business. Since the level of loss at any given probability is dependent on the portfolio of exposures in each business, the statistical measurement for each key risk category gives the Group clearer sight and better control of risk-taking throughout the enterprise.

Principal Risks	Other Level 1 Risks
Retail Credit	Strategic
Wholesale Credit	Change
Market	Corporate Sustainability
Capital	Brand Management
Liquidity	
Financial Crime	
Operations	
Technology	
People	
Regulatory	
Financial Reporting

Taxation	

Risk Methodologies

Fundamental to the delivery of the Group's risk management objectives are a series of risk methodologies that allow it to measure, model, price, stress, aggregate, report and mitigate the risks that arise from its activities. Many of the most important processes relate to the internal ratings used in granting credit and are discussed separately on page 82. The specific methodologies used to manage market risk, liquidity risk, capital risk and operational risk are also discussed in their corresponding sections. At a more general level, the Group's approach to risk management can be illustrated through its use of stress testing and the controls around model governance.

Stress testing

As part of the annual stress testing process, Barclays estimates the impact of a severe economic downturn on the projected demand and supply of capital. This process enables the Group to assess whether it could meet its minimum regulatory capital requirements throughout a severe recession. The Risk Appetite numbers are validated by estimating the Group sensitivity to adverse changes in the business environment and to include operational events that impact the Group as a whole using stress testing and scenario analysis. For instance, changes in certain macroeconomic variables represent environmental stresses which may reveal systemic credit and market risk sensitivities in our retail and wholesale portfolios.

The recession scenarios considered incorporate changes in macroeconomic variables, including:

- Weaker GDP, employment or property prices
- Lower equity prices
- Interest rate curve shifts
- Commodity price movements

Such Group-wide stress tests allow senior management to gain a better understanding of how portfolios are likely to react to changing economic and geopolitical conditions and how the Group can best prepare for and react to them. The stress test simulates the balance sheet and profit and loss effects of stresses across the Group, investigating the impact on profits and the ability to maintain appropriate capital ratios. Insights gained are fully integrated into the senior management process and the Risk Appetite framework. This process of analysis and senior management oversight also provides the basis for fulfilling the stress testing requirements of Basel II.

Group-wide stress testing is only one of a number of stress test analyses that are performed as part of the wider risk management process. Specific stress test analysis is used across all risk types to gain a better understanding of the risk profile and the potential effects of changes in external factors. These stress tests are performed at a range of different levels, from analysis covering specific stresses on individual sub-portfolios (e.g. the impact of higher unemployment on the US cards portfolio) to regularly assessed stress scenarios (such as the effect of a sudden rise in global interest rates on Barclays Capital's market exposures).

Model Governance

Barclays has a large number of models in place across the Group, covering all risk types. To minimise the risk of loss through model failure, a Group Model Risk Policy (GMRP) has been developed. This has been extensively reviewed and enhanced during the course of 2008.

The GMRP helps reduce the potential for model failure by setting minimum standards around the model development and implementation process. The Policy also sets the Group governance processes for all

models, which allows model risk to be monitored, and seeks to identify and escalate any potential problems at an early stage.

To help ensure that sufficient management time is spent on the more material models, each model is provided with a materiality rating. GMRP defines the materiality ranges for all model types. The materiality ranges are based on an assessment of the impact to the Group in the event of a model error. The materiality affects the approval and reporting level for each model, with the most material models being approved by the Executive Models Committee, a technical sub-committee of Group Executive Committee. Although final level of model sign-off will vary, depending on model materiality, the standards of model build, implementation, monitoring and maintenance do not change with the materiality level.

Documentation must be sufficiently detailed, to allow an expert to understand all appropriate aspects of model development. It must include a description of the data used for model development, the methodology used (and the rationale for choosing such a methodology), a description of any assumptions made, as well as details of where the model works well and areas that are known model weaknesses.

All models are subject to a validation and independent review process before the model can be signed-off for implementation. The model validation exercise must demonstrate that the model is fit for purpose and provides accurate estimates. The independent review process will also ensure that all aspects of the model development process have been performed in a suitable manner.

The initial sign-off process ensures that the model is technically fit for purpose as well as ensuring that the model satisfies the business requirements and all the relevant regulatory requirements. As detailed above, the process for model sign-off is based on materiality, with all of a business unit's models at least initially being approved in business-led committees, and Group involvement increasing as the models become more material.

Once implemented, all models within the Group are subject to an annual validation, to ensure that they are performing as expected, and that assumptions used in model development are still appropriate. In line with initial sign-off requirements, annual validations are also formally reviewed at the appropriate technical committee.

In addition to annual validation, models are subject to quarterly performance monitoring. Model performance monitoring ensures that deficiencies are identified early, and that remedial action can be taken before the deficiency becomes serious enough to affect the decision-making process. As part of this process, model owners set performance triggers and define appropriate actions for their models in the event of breaches.

Externally developed models are subject to the same governance standards as internal models, and must be initially approved for use following the validation and independent review process. External models are also subject to the same standards for ongoing monitoring and annual validation requirements.

Within Barclays Capital, where models are used to value positions within the trading book the positions are subject to regular independent price testing which covers all trading positions. Prices are compared to direct external market data where possible. When this is not possible, more analytic techniques are used, such as industry consensus pricing services. These services enable Barclays to anonymously compare structured products and model-input parameters with those of other banks engaged in the trading of the same financial products. The conclusions and any exceptions to this exercise are communicated to senior levels of business and infrastructure management.

Credit risk is the risk of suffering financial loss should any of the Group's customers, clients or market counterparties fail to fulfil their contractual obligations to the Group.

The granting of credit is one of the Group's major sources of income and, as its most significant risk, the Group dedicates considerable resources to controlling it. The importance of credit risk is illustrated by noting that almost two-thirds of risk-based economic capital is allocated to credit risk. The credit risk that the Group faces arises mainly from wholesale and retail loans and advances.

Barclays is also exposed to other credit risks arising from its trading activities, including debt securities, derivatives, settlement balances with market counterparties and reverse repurchase loans.

In managing credit risk, the Group applies the five-step risk management process and internal control framework. Specific credit risk management objectives are:

- To gain a clear and accurate understanding and assessment of credit risk across the business, from the level of individual facilities up to the total portfolio.
- To control and plan the taking of credit risk, ensuring it is coherently priced across the business and avoiding undesirable concentrations.
- To support strategic growth and decision-making based on sound credit risk management principles and a proactive approach to identifying and measuring new risks.
- To ensure a robust framework for the creation, use and ongoing monitoring of the Group's credit risk measurement models.
- To ensure that our balance sheet reflects the value of our assets in accordance with accounting principles.

In the review of Barclays credit risk management that follows, we first explain how the Group meets its credit risk management objectives through its organisation, structure and governance, its measurement, reporting and system of internal ratings and its mechanisms for credit risk mitigation.

We then provide a summary of the Group's total assets, including the asset types which give rise to credit risk and counterparty credit risk, namely: loans and advances, debt securities and derivatives.

On pages 89 to 102, we set out a detailed analysis of the Group's loans and advances across a number of asset classes and businesses referencing significant portfolios and including summary measures of asset quality.

We next provide disclosures and analyses of the credit risk profiles of these asset categories, beginning with Barclays Capital's credit market exposures by asset class, covering current exposures, losses during 2008, sales and paydowns, foreign exchange movements and, where appropriate, details of collateral held, geographic spread, vintage and credit quality. These are given on pages 106 to 118.

Finally, additional analysis of debt securities and derivatives can be found on pages 103 and 104 to 105.

Barclays has structured the responsibilities of credit risk management so that decisions are taken as close as possible to the business, whilst ensuring robust review and challenge of performance, risk infrastructure and strategic plans.

The credit risk management teams in each business are accountable to the Business Risk Directors in those businesses who, in turn, report to the heads of their businesses and also to the Risk Director. These credit risk management teams assist Group Risk in the formulation of Group Risk policy and its implementation across the businesses. Examples include:

- maximum exposure guidelines to limit the exposures to an individual customer or counterparty
- country risk policies to specify risk appetite by country and avoid excessive concentration of credit risk in individual countries
- policies to limit lending to certain industrial sectors
- underwriting criteria for personal loans and maximum loan-to-value ratios for home loans

Within Group Risk, the Credit Risk function provides Group-wide direction of credit risk-taking. This functional team manages the resolution of all significant credit policy issues and runs the Credit Committee, which approves major credit decisions.

The principal Committees that review credit risk management, formulate overall Group credit policy and resolve all significant credit policy issues are the Group Wholesale Credit Risk Management Committee, the Group Retail Credit Risk Management Committee, the Risk Oversight

Committee and the Board Risk Committee. The Board Audit Committee also reviews the impairment allowance as part of financial reporting.

The Group Credit Risk Impairment Committee (GCRIC), on a semi-annual basis, obtains assurance on behalf of the Group that all businesses are recognising impairment in their portfolios accurately and promptly in their recommendations and in accordance with policy, accounting standards and established governance.

GCRIC exercises the authority of the Group Risk Director, as delegated by the Group Chief Executive, and is chaired by Barclays Credit Risk Director. GCRIC reviews the movements to impairment in the businesses, including those already agreed at Credit Committee, as well as Potential Credit Risk Loans, loan loss rates, asset quality metrics and Risk Tendency.

These committees are supported by a number of Group policies including:

- Group Retail and Wholesale Impairment and Provisioning Policies
- Group Retail and Wholesale Expected Loss Policies
- Group Model Policy

GCRIC makes twice-yearly recommendations to the Board Audit Committee on the adequacy of Group impairment allowances.

Impairment allowances are reviewed relative to the risk in the portfolio, business and economic trends, current policies and methodologies, and our position against peer banks.

GCRIC has delegated the detailed review of loan impairment in the businesses to the Retail and Wholesale Credit Risk Management Committees.

Credit risk management

Measurement, reporting and internal ratings

The principal objective of credit risk measurement is to produce the most accurate possible quantitative assessment of the credit risk to which the Group is exposed, from the level of individual facilities up to the total portfolio. The key building blocks in this quantitative assessment are:

- Probability of default (PD)
- Exposure in the event of default (EAD)
- Loss given default (LGD)

Barclays first began to use internal estimates of PD in its main businesses in the 1990s. Internally derived estimates for PD, EAD and LGD have since been used in our major risk decision-making processes, enabling the application of coherent risk measurement across all credit exposures, retail and wholesale.

With the advent of the Basel II accord on banking, Barclays has been given permission to use internal rating models as an input to its regulatory capital calculations. In preparation, Barclays spent considerable time developing and upgrading a number of such models across the Group, moving towards compliance with the Basel II advanced internal ratings based approach. As part of this process, all Basel credit risk models have been assessed against the Basel II minimum requirements prior to model sign-off to ensure that they are fit to be used for regulatory purposes.

Applications of internal ratings

The three components described above – the PD, EAD and LGD – are building blocks used in a variety of applications that measure credit risk across the entire portfolio. These parameters can be calculated incorporating different aspects of the credit cycle into the estimates:

- PD estimates can be calculated on a through-the-cycle (TTC) basis, reflecting the predicted default frequency in an average 12 month period across the credit cycle, or on a point-in-time (PIT) basis, reflecting the predicted default frequency in the next 12 months.
- LGD and EAD estimates can be calculated as downturn measures, reflecting behaviour observed under stressed economic conditions, or as business-as-usual (BAU) measures, reflecting best modelled behaviour under actual conditions.

These parameters, in suitable combination, are used in a wide range of credit risk measurement and management and as our understanding and experience have developed, we have extended the use and sophistication of internal ratings into the following:

- Credit Approval: PD models are used in the approval process in both retail and wholesale portfolios. In high-volume retail portfolios, application and behaviour scorecards are frequently used as decision-making tools. In wholesale and some retail mortgage portfolios, PD models are used to direct applications to different credit sanctioning levels, so that credit risks are reviewed at appropriate levels.
- Credit Grading: originally introduced in the early 1990s to provide a common measure of risk across the Group using an eight point rating scale; wholesale credit grading now employs a 21 point scale of default probabilities.
- Risk-Reward and Pricing: PD, EAD and LGD metrics are used to assess profitability of deals and portfolios and to allow for risk-adjusted pricing and strategy decisions.
- Risk Appetite: measures of expected loss and the potential volatility of loss are used in the Group's Risk Appetite framework (see page 78).
- IAS 39: many of our collective impairment estimates incorporate the use of our PD and LGD models, adjusted as necessary.
- Collections and Recoveries: model outputs are frequently used to segment portfolios allowing for suitably prioritised collections and recoveries strategies in retail portfolios.
- Economic capital (EC) allocation: most EC calculations use the same PD and EAD inputs as the regulatory capital (RC) process. The process also uses the same underlying LGD model outputs as the RC calculation, but does not incorporate the same economic downturn adjustment used in RC calculations.
- Risk management information: Group Risk and the business units generate risk reports to inform senior management on issues such as the business performance, Risk Appetite and consumption of EC.

Calculation of internal ratings

To calculate **probability of default** (PD), Barclays assesses the credit quality of borrowers and other counterparties and assigns them an internal risk rating. Multiple rating methodologies may be used to inform the rating decision on individual large credits, such as internal and external models, rating agency ratings, and for wholesale assets market information such as credit spreads. For smaller credits, a single source may suffice such as the result from an internal rating model. Barclays recognises the need for

two different expressions of PD depending on the purpose for which it is used. For the purposes of calculating regulatory and economic capital, long-run average through-the-cycle PDs are required. However, for the purposes of pricing, PDs should represent the best estimate of probability of default, typically in the next 12 months, dependent on the current position in the credit cycle. Hence, point-in-time PDs are also required.

Each PD model outputs a point-in-time (PIT), through-the-cycle (TTC) or a hybrid, e.g. a 50:50 blend, default estimate. Conversion techniques appropriate to the portfolio are then applied to calculate both PIT and TTC estimates. Industry and location of the counterparty and an understanding of the current and long-term credit conditions are considered in deriving the appropriate conversion. Two ratings are therefore recorded for each client, the PIT and the TTC estimates.

Barclays internal rating system also differentiates between wholesale and retail customers. For wholesale portfolios, the rating system is constructed to ensure that each client receives the same rating independent of the part of the business with which they are dealing. To achieve this, a model hierarchy is adopted which requires users to adopt a specific approach to rating each counterparty depending upon the nature of the business and its location.

A range of methods is approved for estimating wholesale counterparty PDs. These include bespoke grading models developed within the Barclays Group (Internal Models), vendor models such as MKMV Credit Edge and RiskCalc, and a conversion of external alphabet ratings from either S&P, Moody's or Fitch. Retail models, especially those used for capital purposes, are almost exclusively built internally using Barclays data, although in some cases bureau models may be used in conjunction with these models. In addition, in some low data/low default environments external developments may be utilised for decision-making purposes.

A key element of the Barclays Wholesale framework is the probability of default distribution, which maps PDs into internal grades both for PIT (default grades) and TTC (TTC band) purposes. This has been developed to record differences in the probability of default risk at meaningful levels throughout the risk range. In contrast to wholesale businesses, retail areas do not bucket exposures into generic grades for account management purposes (although they may be used for reporting purposes). Instead, accounts are managed either at a granular level or based on bespoke segmentations.

Exposure at default (EAD) represents the expected level of usage of the credit facility when default occurs. At default, the customer may not have drawn the loan fully or may already have repaid some of the principal,

so that exposure is typically less than the approved loan limit. When the Group evaluates loans, it takes exposure at default into consideration, using its extensive historical experience. It recognises that customers may make heavier than average usage of their facilities as they approach default. The lower bound of EAD is the actual outstanding balance at calculation of EAD. For derivative instruments, exposure in the event of default is the estimated cost of replacing contracts with a positive value should counterparties fail to perform their obligations.

When a customer defaults, some part of the amount outstanding on the loan is usually recovered. The part that is not recovered, the actual loss, together with the economic costs associated with the recovery process, comprise the **loss given default (LGD)**, which is expressed as a percentage of EAD. Using historical information, the Group estimates how much is likely to be lost, on average, for various types of loans in the event of default.

The level of LGD depends principally on: the type of collateral (if any); the seniority or subordination of the exposure; the industry in which the customer operates (if a business); the length of time taken for the recovery process and the timing of all associated cash flows; and the jurisdiction applicable and work-out expenses. The outcome is also dependent on economic conditions that may determine, for example, the prices that can be realised for assets, whether a business can readily be refinanced or the availability of a repayment source for personal customers.

The ratings process

The term 'internal ratings' usually refers to internally calculated estimates of PD. These ratings are combined with EAD and LGD in the range of applications described previously. The 'ratings process' refers to the use of PD, EAD and LGD across the Group. In Barclays, the rating process is defined by each business. For central government and banks, institutions and corporate customers many of the models used in the rating process are shared across businesses as the models are customer specific. For retail exposures, the ratings models are usually unique to the business and product type e.g. mortgages, credit cards, and consumer loans.

Wholesale Approaches

A bespoke model has been built for PD and LGD for **Sovereign** ratings. For Sovereigns where there is no externally available rating, we use an internally developed PD scorecard. The scorecard has been developed using historic data on Sovereigns from an external data provider covering a wide range of qualitative and quantitative information. Our LGD model is based on resolved recoveries in the public domain, with a significant element of conservatism added to compensate for the small sample size.

Barclays probability of default grades (wholesale)

DG/TTC Band	Default Probability		
	>=Min	Mid	<Max
1	0.00%	0.010%	0.02%
2	0.02%	0.025%	0.03%

Credit risk management

Measurement, reporting and internal ratings

To construct ratings for [institutions](#), [corporates](#), [specialised lending and purchased corporate receivables](#) and [equity](#) exposures, we use external models, rating agencies and internally constructed models. The applicability of each of these approaches to our customers has been validated by us to internal rating standards. The data used in validating these primary indicators are representative of the population of the bank's actual obligors and exposures and its long-term experience.

Internally built PD models are also widely used. We employ a range of methods in the construction of these models. The basic types of PD modelling approaches used are:

- Structural
- Expert lender
- Statistical

Structural models incorporate in their specification the elements of the industry-accepted Merton framework to identify the distance to default for a counterparty. This relies upon the modeller having access to specific time series data or data proxies for the portfolio. Data samples used to build and validate these models are typically constructed by adding together data sets from internal default observations with comparable externally obtained data sets from commercial providers such as rating agencies and industry gathering consortia.

Expert lender models are used for parts of the portfolio where the risk drivers are specific to a particular counterparty, but where there is insufficient data to support the construction of a statistical model. These models utilise the knowledge of credit experts that have in depth experience of the specific customer type being modelled.

For any of the portfolios where we have a low number of default observations we adopt specific rules to ensure that the calibration of the model meets the Basel II and FSA criteria for conservatism. We have developed our own internal policy which describes specific criteria for the use of parametric and non-parametric low default portfolio calibration techniques.

Statistical models such as behavioural and application scorecards are used for our high volume portfolios such as Small/Medium Enterprises (SME). The model builds typically incorporate the use of large amounts of internal data, combined with supplemental data from external data suppliers. Where external data is sourced to validate or enhance internally-held data as part of the risk assessment process or to support model development and BAU operation, a similar approach is adopted towards ensuring data quality to that applied to the management of internal data. This entails adherence to the Group's procurement and supplier management process, including the agreement of specifications and service level agreements.

In wholesale portfolios the main approaches to calculate LGD aim to establish the affects of drivers (including industry, collateral coverage, recovery periods, seniority and costs) by looking at Barclays historical experience, supplemented with other external information where necessary. Estimates built using historical information are reviewed to establish whether they can be expected to be representative of future loss rates, and adjusted if necessary.

In a similar fashion, wholesale EAD models estimate the potential utilisation of headroom based on historical information also considering the future outlook of client behaviour.

Typically, modellers do not manipulate external data before using it as input to the model estimation or validation procedure. Changes required in the estimation and validation process are documented in the model build papers.

For all the above asset classes we use the Basel II definition of default, utilising the 90 day past due criteria as the final trigger of default.

Derivative counterparty credit risk measurement

The magnitude of trading exposure is determined by considering the current mark to market of the contract, the historic volatility of the underlying asset and the time to maturity. This allows calculation of a credit equivalent exposure (CEE) for such exposures using a stochastic method and a 98% confidence level.

Retail Approaches

Our [retail](#) banking operations have long and extensive experience of using credit models in assessing and managing risk in their businesses and as a result models play an integral role in customer approval and management processes.

Models used include PD models, mostly in the form of application and behavioural scorecards, as well as LGD and EAD models.

Application scorecards are derived from the historically observed performance of new clients. They are built using customer demographic and financial information, supplemented by credit bureau information where available. Through statistical techniques, the relationship between these candidate variables and the default marker is quantified to produce output scores reflecting a PD. These scores are used primarily for new customer decisioning but are, in some cases, also used to allocate PDs to new customers for the purposes of capital calculation.

Behavioural scorecards are derived from the historically observed performance of existing clients as well as being supplemented by the same data as is used for application scoring, including the use of bureau data. The techniques used to derive the output are the same as for application scoring. The output scores are used for existing customer management activities as well as for allocating PDs to existing customers for the purposes of capital calculation.

It is Barclays philosophy to embed Basel II models as extensively as possible in the portfolio management process. This is an ongoing initiative and we expect greater convergence over time. However, in some cases there are sound business reasons for having different models for capital allocations and internal processes.

EAD models within retail portfolios are split into two main methodological categories. The less complex models derive product level credit conversion factors (CCFs) from historical balance migrations; these are frequently further segmented at a delinquency bucket level. The most sophisticated EAD models are behavioural based, determining customer level CCFs from characteristics of the individual facility.

Retail LGD models are built using bespoke methods chosen to best model the observed recovery process. In a number of secured portfolios, structural models are often used which parameterise the LGD drivers giving models which can easily be updated to reflect current market trends. Models based on historical cash collected curves are often utilised in portfolios where recoveries are not based on the recovery of a single source of collateral. Finally, in some instances regression techniques are used to generate predicted LGDs based on account characteristics. In all instances bespoke country level factors are derived to discount recovery flows to the point of default. For capital calculations, customised economic downturn adjustments are made to adjust losses to stressed conditions.

Most retail models within Barclays are built in-house, although occasionally external consultants will be contracted to build models on behalf of the businesses. Whilst most models are statistically or empirically derived, some expert lender models (similar to those described above in the wholesale context) are used, particularly where data limitations preclude a more sophisticated approach.

Where models are used in the calculation of regulatory capital, the definition of default is in line with the regulatory definition of default requirements i.e. for UK portfolios the default definition is 180 days past due whilst international regulators may have different rules. In some cases, for models not used in regulatory capital calculations, in order to maximise model suitability, different default definitions are used. However, in all cases EAD and LGD models are appropriately aligned.

The control mechanisms for the rating system

Each of the business risk teams is responsible for the design, oversight and performance of the individual credit rating models – PD, LGD and EAD – that comprise the credit rating system for a particular customer within each asset class. Group-wide standards in each of these areas are set by Group Risk and are governed through a series of committees with responsibility for oversight, modelling and credit measurement methodologies.

Through their day-to-day activities, key senior management in Group Credit Risk, the businesses and the business risk teams have a good understanding of the operation and design of the rating systems used. For example:

- The respective Business Risk Heads or equivalents are responsible for supplying a robust rating system.
- The Group Risk Director, Credit Risk Director and Wholesale and Retail Credit Risk Directors are required to understand the operation and design of the rating system used to assess and manage credit risk in order to carry out their responsibilities effectively. This extends to the Business CEOs, Business Risk Directors and the Commercial/ Managing Directors or equivalent.

In addition, [Group Model Risk Policy](#) requires that all models be validated as part of the model build (see page 79). This is an iterative process that is carried out by the model owner. Additionally, a formal independent review is carried out after each model is built to check that it is robust, meets all internal and external standards and is documented appropriately. These reviews must be documented and conducted by personnel who are independent of those involved in the model-building process. The results of the review are required to be signed off by an appropriate authority.

In addition to the independent review, post implementation and annual reviews take place for each model. These reviews are designed to ensure compliance with policy requirements such as:

- integration of models into the business process
- compliance with the model risk policy
- continuation of a robust governance process around model data inputs and use of outputs

Model performance is monitored regularly; frequency of monitoring is monthly for those models that are applicable to higher volume or volatile portfolios, and quarterly for lower volume or less volatile portfolios. Model monitoring includes coverage of the following characteristics: utility, stability, efficiency, accuracy, portfolio and data.

Model owners set performance ranges and define appropriate actions for their models. As part of the regular monitoring, the performance of the models is compared with these operational ranges. If breaches occur, the model owner reports these to the approval body appropriate for the materiality of the model. The model approver is responsible for ensuring completion of the defined action, which may ultimately be a complete rebuild of the model.

The Group uses a wide variety of techniques to reduce credit risk on its lending. The most basic of these is performing an assessment of the ability of a borrower to service the proposed level of borrowing without distress. In addition, the Group commonly obtains security for the funds advanced, such as in the case of a retail or commercial mortgage, a reverse repurchase agreement, or a commercial loan with a floating charge over book debts and inventories. The Group ensures that the collateral held is sufficiently liquid, legally effective, enforceable and regularly valued.

Various forms of collateral are held and commonly include: cash in major currencies; fixed income products including government bonds; letters of credit; property, including residential and commercial; and other fixed assets.

The Group actively manages its credit exposures and when weaknesses in exposures are detected – either in individual exposures or in groups of exposures – action is taken to mitigate the risks. These include steps to reduce the amounts outstanding (in discussion with the customers, clients or counterparties, if appropriate), the use of credit derivatives and, sometimes, the sale of the loan assets.

The Group also uses various forms of specialised legal agreements to reduce risk, including netting agreements which permit it to offset positive and negative balances with customers in certain circumstances to minimise the exposure at default, as well as financial guarantees, and the use of covenants in commercial lending agreements.

Barclays manages the diversification of its portfolio to avoid unwanted credit risk concentrations. A concentration of credit risk exists when a number of counterparties are engaged in similar activities and have similar economic characteristics that would cause their ability to meet contractual obligations to be similarly affected by changes in economic or other conditions.

Credit risk mitigation to address concentrations takes several dimensions. Within wholesale credit risk, maximum exposure guidelines are in place relating to the exposures to any individual counterparty. These permit higher exposures to borrowers with higher ratings. They also distinguish between types of counterparty, for example, between sovereign governments, banks and corporations. Excesses to maximum exposure guidelines are considered individually at the time of credit sanctioning, are reviewed regularly, and are reported to the Risk Oversight Committee and the Board Risk Committee.

'Wrong way risk' in a trading exposure arises when there is significant correlation between the underlying asset and the counterparty which in the event of default would lead to a significant mark to market loss.

When assessing the credit exposure of a wrong way trade, analysts take into account the correlation between the counterparty and the underlying asset as part of the sanctioning process. Adjustments to the calculated CEE are considered on a case by case basis.

The Risk Oversight Committee has delegated and apportioned responsibility for risk management to the Retail and Wholesale Credit Risk Management Committees. The Retail Credit Risk Management Committee (RCRMC) oversees exposures, which comprise unsecured personal lending (including small businesses), mortgages and credit cards. The RCRMC monitors the risk profile and performance of the retail

portfolios by receipt of key risk measures and indicators at an individual portfolio level, ensuring mitigating actions taken to address performance are appropriate and timely. Metrics reviewed will consider portfolio composition at both an overall stock and new flow level.

The Wholesale Credit Risk Management Committee (WCRMC) oversees wholesale exposures, comprising lending to businesses, banks, other financial institutions and sovereigns. The WCRMC monitors exposure by country, industry sector, individual large exposures and exposures to sub-investment grade countries.

Country concentrations are addressed through the country risk policy and utilisation of country limits which specify Risk Appetite by country and avoid excessive concentrations of credits in individual countries. Country risk grades are assigned to all countries where the Group has, or is likely to have, exposure and are reviewed regularly to ensure they remain appropriate. Country grades, which are derived from long-term sovereign foreign currency ratings, range from 1 (lowest probability of default) to 21 (highest probability of default). A ceiling is applied where a country is graded 12 or worse so that the counterparty cannot normally receive a higher risk grading than the country, unless some form of protection is available in the event of a cross-border event, such as a significant portion of a counterparty's assets or income being held or generated in hard currency.

To manage exposure to country risk, the Group uses two country limits: the Prudential Guideline and the Country Guideline. The Prudential Guideline is identified through the strict mapping of a country grade to derive a model-driven acceptable level of country appetite. The Country Guideline for all graded countries is set by the Credit Committee based on the Prudential Guideline and the internal assessment of country risk. The Country Guideline may therefore be above or below the Prudential Guideline.

Country risk is calculated through the application of Country Loss Given Default (CLGD). All cross-border or domestic foreign currency transactions incur CLGD from the Country Guideline agreed at Credit Committee. The level of CLGD incurred by a counterparty transaction will largely depend on three main factors: the country severity, the product severity and counterparty grade. CLGD is incurred in the country of direct risk, defined as where the majority of operating assets are held. This may differ from the country of incorporation. However, where transactions are secured with collateral, the country risk can be transferred from the country of the borrower to the country of the collateral provider. This is only permitted where the collateral covers the borrowing and is not expected to decrease over time.

Country Managers are in place for all countries where the Group has exposure and they, under the direction of Credit Committee, have responsibility for allocating country risk to individual transactions. The total allocation of country limits is monitored on a daily basis by Group Credit Risk, as headed by the Credit Risk Director. Discretions exist to increase the Country Guideline above the level agreed by Credit Committee where the Country Guideline is below the Prudential Guideline. All requests to increase the Country Guideline in line with individual discretions must be submitted to and applied centrally through Group Credit Risk.

A further mitigant against undesirable concentration of risk is the mandate and scale framework described on page 78. Mandate and scale limits, which can also be set at Group level to reflect overall Risk Appetite, can relate either to the stock of current exposures in the relevant portfolio or to the flow of new exposures into that portfolio. Typical limits include the caps on UK commercial investment property lending, the proportion of lending with maturity in excess of seven years and the proportion of new mortgage business that is buy-to-let. The mandate and scale framework also provides protection against undue concentrations within the collateral held.

Concentrations of credit exposure described in this credit risk management section and the following statistical section are not proportionally related to credit loss. Some segments of the Group's portfolio have and are expected to have proportionally higher credit charges in relation to the exposure than others. Moreover, the volatility of credit loss is different in different parts of the portfolio. Thus, comparatively large credit impairment charges could arise in parts of the portfolio not mentioned here.

Securitisations

In the course of its business, Barclays has traditionally undertaken securitisations of its own originated assets as well as the securitisation of third party assets via sponsored conduit vehicles and shelf programmes.

Barclays has securitised its own originated assets in order to manage the Group's credit risk position, to obtain regulatory capital relief, and to generate term liquidity for the Group balance sheet.

For these transactions Barclays adopts the following roles in the securitisation process:

- Originator of securitised assets
- Executor of securitisation trades including bond marketing and syndication
- Provider of securitisation trade servicing, including data management, investor payments and reporting.

As at the end 2008 Barclays has securitised its own originated retail and commercial mortgages, credit cards and corporate loans across both funded traditional and synthetic transactions.

Barclays acts as an administrator and manager of multi-seller conduits through which interests in third-party-originated assets are securitised and funded via the issuance of asset backed commercial paper. From a regulatory perspective, Barclays would be defined primarily as a sponsor of these conduits.

In relation to such conduit activity, Barclays may provide all or a portion of the backstop liquidity to the commercial paper, programme-wide credit enhancement and, as appropriate, interest rate and foreign currency hedging facilities. Barclays receives fees for the provision of these services.

In addition to the above, Barclays has provided swaps to securitisation vehicles, both those sponsored by Barclays and those sponsored by third

parties, in order to provide hedges against interest rate and/or currency movements. This forms part of Barclays Capital's market making activity in interest rate and foreign exchange products.

Barclays also acts as an investor in third-party securitisations (i.e. where Barclays would not be defined as an originator or a sponsor for regulatory purposes). This includes positions in ABS CDO Super Senior, other US Sub Prime & Alt A and bonds which benefit from monoline credit protection. See 'Barclays Capital Credit Market Exposures' on pages 106 to 118 for further details.

Due to the market disruption experienced since August 2007, the volume of securitisation activity in all forms that Barclays has undertaken has been more limited than previously. In addition, the change in risk weighting of certain assets (for example residential mortgages) and of banks securitisations exposures as a result of the introduction of the Basel II regime means that the extent of regulatory relief obtainable from securitisations has changed.

As such, Barclays own asset securitisation in 2008 was limited mainly to trades where securities have been retained on balance sheet and used as required as in central bank liquidity schemes.

During 2008, Barclays launched Salisbury Receivables Corporations ('Salisbury'), a multi-seller asset-backed commercial paper conduit modelled after Sheffield Receivables Corporation ('Sheffield'), which was launched in December 1991. Similar to Sheffield, Salisbury has the ability to issue both US commercial paper ('CP') and Euro CP notes to finance client asset-backed receivable transactions. Sponsored conduits primarily fund traditional assets such as credit cards, auto loans, student loans, prime mortgages and trade receivables.

RWAs reported for securitised assets at December 2008 are calculated in line with FSA regulations as well as any individual guidance received from the FSA as at the end of the period. Barclays has approval to use the Internal Ratings Based Approach for the calculation of RWAs. Within this, the Group uses the Internal Assessment Approach and the Supervisory Formula Approach to calculate its regulatory capital requirements arising from its securitisation exposures.

Further information about securitisation activities and accounting treatment is in Note 29. The Group's accounting policies, including those relevant to securitisation activities are on page 193.

For certain transactions, there may be a divergence between the accounting and regulatory treatment of Barclays exposure to securitisations, for example in the treatment of exposure values. This will reflect differing guidance given in the accounting and regulatory regimes which in turn reflect the areas in which the aims of each regime differ.

Barclays employs External Credit Assessment Institutions to provide ratings for its asset backed securities. Their use is dependent on the transaction or asset class involved. For existing transactions, we employ Standard & Poor's, Moody's and Fitch for securitisations of corporate, residential mortgage and other retail exposures and Standard & Poor's and Moody's for securitisations of small and medium-sized entity and revolving retail exposures.

Notes

^a Further analysis of loans and advances is on pages 89 to 102

^b Further analysis of debt securities and other bills is on page 103

^c Further analysis of derivatives is on pages 104 to 105.

^d Reverse repurchase agreements comprise primarily short-term cash lending with assets pledged by counterparties securing the loan.

^e Further analysis of Barclays Capital credit market exposures is on pages 106 to 118.

^f Equity securities comprise primarily equity securities determined by available quoted prices in active markets.

^g Commodities primarily consists of physical inventory positions.

^h These instruments consist primarily of loans with embedded derivatives and reverse repurchase agreements designated at fair value.

ⁱ Financial assets designated at fair value in respect of linked liabilities to customers under investment contracts have not been further analysed as the Group is not exposed to the risks inherent in these assets.

As the granting of credit is one of the Group's major sources of income and its most significant risk, the Group dedicates considerable resources to gaining a clear and accurate understanding of credit risk across the business and ensuring that its balance sheet correctly reflects the value of the assets in accordance with applicable accounting principles. This process can be summarised in the following broad stages:

- Measuring exposures and concentrations
- Monitoring weakness in exposures
- Identifying potential problem loans and credit risk loans (collectively known as potential credit risk loans or PCRLs)
- Raising allowances for impaired loans
- Writing off assets when the whole or part of a debt is considered irrecoverable

Measuring exposures and concentrations

Loans and advances to customers provide the principal source of credit risk to the Group although Barclays can also be exposed to other forms of credit risk

through loans to banks, loan commitments, contingent liabilities and debt securities. The value of outstanding loans and advances balances, their risk profile, and potential concentrations within them can therefore have a considerable influence on the level of credit risk in the Group.

As at 31st December 2008, total loans and advances to customers and banks net of impairment allowance were £542,118m (2007: £410,789m), a rise of 32% on the previous year. Loans and advances at amortised cost were £509,522m (2007: £385,518m) and loans and advances at fair value were £32,596m (2007: £25,271m). Loans and advances were well distributed across the retail and wholesale portfolios.

Loans and advances were also well spread across industry classifications. Barclays largest sectoral exposure is to home loans which, combined with other personal and business services sectors, comprise 48% of total loans and advances (2007: 53%). These categories are generally comprised of small loans, have low volatility of credit risk outcomes, and are intrinsically highly diversified. Growth in loans and advances to the financial services sector reflected an increased client base in the fund management business and increases in cash collateral. Loans and advances are further diversified across a number of geographical regions,

based on location of customers. The majority of Barclays exposure is now outside the UK, reflecting higher rates of growth in the international portfolios as well as the effects of currency movements in 2008.

Barclays also actively monitors exposure and concentrations to sub-investment grade countries (see country risk policy, page 86). Details of the 15 largest sub-investment grade countries, by limit, are shown in figure 3.

Contractual maturity represents a further area of potential concentration. The analysis shown in figure 4 indicates that just over 40% of loans to customers have a maturity of more than five years; the majority of this segment comprises secured home loans.

Barclays risk is therefore spread across a large number of industries and customers and in the case of home loans, for example, well secured. These classifications have been prepared at the level of the borrowing entity. This means that a loan to the subsidiary of a major corporation is classified by the industry in which the subsidiary operates, even though the parent's predominant sphere of activity may be in a different industry.

Fig. 3: Credit exposure to sub-investment grade countries £m

Corporate and wholesale loans and advances

Gross loans and advances to wholesale customers and banks grew 38% to £314,508m (31 st December 2007: £227,209m), largely due to Barclays Capital where loans and advances increased £72,514m (53%).

Credit Risk Loans (CRLs) rose 59% to £8,192m (31 st December 2007: £5,157m). As a percentage of gross loans and advances, CRLs increased 13% to 2.6% (31 st December 2007: 2.3%). CRL balances were higher in all businesses, reflecting the downturn in economic conditions, with some deterioration across default grades, higher levels of Early Warning List balances and a rise in impairment and loan loss rates in most wholesale portfolios. The largest rises were in Barclays Capital and GRCB – Western Europe.

Impairment charges on loans and advances rose 119% (£1,403m) to £2,580m (31 st December 2007: £1,177m), primarily in Barclays Capital, although all other businesses were higher than the previous year. Impairment in Barclays Commercial Bank rose in both the Larger and

Total	227,209	1,312	225,897	5,157	2.30	1,177	52

Medium Business divisions. Deterioration in the Spanish commercial and residential property markets led to higher impairment in GRCB – Western Europe, while in GRCB – Absa, wholesale credit impairment began to rise from a low base and credit indicators began to show deterioration. The loan loss rate on the wholesale and corporate portfolio rose to 82bp (2007: 52bp).

In the wholesale and corporate portfolios impairment allowances increased 116% to £2,835m (31st December 2007: £1,312m).

Barclays largest corporate loan portfolios continue to be in Barclays Capital and Barclays Commercial Bank. Barclays Capital's corporate loan book grew 43% to £72,796m in 2008, driven by the decline in the value of Sterling relative to other currencies as well as drawdowns on existing loan facilities and the extension of new loans at current terms to financial and manufacturing institutions. Loans and advances at amortised cost grew 5% in Barclays Commercial Bank and was focused in lower-risk portfolios in Larger Business.

Portfolio growth rates were higher in the international businesses, where Global Retail and Commercial Banking's wholesale portfolios in Western Europe, Emerging Markets and Absa grew by 40%, 56% and 63%, respectively.

Analysis of Barclays Capital wholesale loans and advances net of impairment allowances

Barclays Capital wholesale loans and advances increased 53% to £208,596m (2007: £136,082m). This was driven by a decline in the value of Sterling relative to other currencies, increased drawdowns on existing corporate lending facilities and the extension of new loans to corporate clients at current terms. Additionally, continuing market volatility resulted in increased cash collateral being placed with clients relating to OTC derivatives.

The corporate lending portfolio, including leveraged finance, increased 47% to £76,556m (2007: £52,258) primarily due to drawdowns on existing loan facilities and the extension of new loans at current terms to financial and manufacturing institutions.

Included within corporate lending and other wholesale lending portfolios are £7,674m of loans backed by retail mortgage collateral.

Barclays Capital loans and advances held at fair value

Barclays Capital loans and advances held at fair value were £19,630m (2007: £18,259m). These assets are primarily made up of US RMBS whole loans and commercial real estate loans, £14,429m of which is discussed within the credit market exposures.

Analysis of Barclays Commercial Bank loans and advances

The tables below analyse the industry split of Barclays Commercial Bank loans and advances after impairment allowance of £504m. The loan book consists of both loans and advances held at amortised cost and loans and advances held at fair value.

Loans and advances held at fair value were £12,966m as at 31st December 2008. Of these, £12,360m related to government, local authority and social housing. Fair value exceeds amortised cost by £3,018m. Fair value is calculated using a valuation model with reference

to observable market inputs and is matched by offsetting fair value movements on hedging instruments. The underlying nominal portfolio increased 47% in 2008.

Property balances within loans and advances at amortised cost and held at fair value totalled £16,351m, of which £8,795m related to social housing.

The weighted average of the drawn balance loss given default, for all of the above loans and advances, was 31%.

Retail loans and advances

Gross Loans and Advances to retail customers grew 24% to £201,588m (31st December 2007: £162,081m). The principal drivers were GRCB – Western Europe, UK Retail Banking, and Barclaycard. The GRCB – Western Europe retail portfolio grew by £14,436m (59%) to £38,918m, largely driven by home loans in Spain and Italy, and the appreciation of the Euro against Sterling. The UK Retail Banking portfolio increased by £12,319m (15%) to £96,083m, primarily driven by UK home loans. The Barclaycard Retail portfolios grew by £8,866m (43%) to £29,390m, with growth across the US, UK and Barclaycard's other European card portfolios.

Total home loans to retail customers grew by 27% to £135,077m, driven by the 58% rise in GRCB – Western Europe, reflecting currency movements and book growth. The UK home finance portfolios within UK Retail Banking grew 18% to £82,303m (31st December 2007: £69,805m).

Unsecured retail credit (credit card and unsecured loans) portfolios grew 43% to £38,856m (31st December 2007: £27,256m), principally as a result of growth in Barclaycard US and GRCB – Western Europe as well as the acquisition of Goldfish in the UK.

Home Loans

The Group's principal home loans portfolios continue to be in the UK Retail Banking Home Finance business (61% of the Group's total), GRCB – Western Europe (25%) primarily Spain, and South Africa (14%). During the year, the Group managed the risk profile of these portfolios by strengthening underwriting criteria and reducing the maximum loan to value (LTV) ratios, with greater discrimination between purchases and remortgages and, within the UK buy to let (BTL) segment, between portfolio customers and single property investors.

Credit quality of the principal home loan portfolios reflected relatively low levels of high LTV lending. The LTVs on the Group's principal home loan portfolios are shown in table 9. Using recent valuations, the LTV of the portfolios as at 31st December 2008 was 40% for UK Retail Banking's mortgage business, 48% for the Spanish mortgage portfolio within GRCB – Western Europe and 41% for GRCB – Absa's mortgage portfolio in South Africa. The average LTV for new mortgage business during 2008 at origination for these portfolios was 47% for the UK, 63% for Spain and 58% for South Africa. The percentage of balances with an LTV of over 85% based on current values was 10% for the UK, 5% for Spain and 25% for South Africa. In the UK, BTL mortgages comprised 6.8% the total stock.

Impairment charges rose across the home loan portfolios, reflecting the impact of lower house prices as well as some increase in arrears rates. Three-month arrears as at 31st December 2008 were 0.91% for UK

mortgages, 0.76% for Spain and 2.11% for South Africa. To support the Group's risk profile, we increased collections staff across the businesses and improved operational practices to boost effectiveness.

Credit Cards and Unsecured Loans

The Group's largest card and unsecured loan portfolios are in the UK (47% of Group total). The US accounts for 19%, where Barclaycard's portfolio is largely Prime credit quality (FICO score of 660 or more). To address the impact of economic deterioration and the impact of weaker labour markets on the unsecured portfolios in 2008, the Group used a range of measures to improve new customer quality and control the risk profile of existing customers.

In the UK Cards portfolio, initial credit lines were made more conservative, followed by selective credit limit increases using more accurately assessed customer behaviour. The overall number of credit limit increases were reduced by strengthening qualification criteria and a proportion of higher-risk dormant accounts were closed. Arrears rates in the UK Cards portfolio fell slightly during the year, reflecting measures taken to improve customer quality in 2007 and 2008. Repayment Plan balances grew to support government initiatives to supply relief to customers experiencing financial difficulty. Payment rates in repayment plans remained relatively stable.

As a percentage of the portfolio, three-month arrears rates rose during 2008 to 1.87% for UK Loans and 2.15% for US Cards. The rate reduced to 1.28% for UK Cards.

Monitoring weaknesses in exposures

Barclays actively manages its credit exposures. When weaknesses in exposures are detected – either in individual exposures or in groups of exposures – the Group takes action to mitigate the risks. Such actions may, for example, include: reducing the amounts outstanding (in discussion with the customers, clients or counterparties if appropriate); using credit derivatives securitising the assets; and, on occasion, selling them.

Corporate accounts that are deemed to contain heightened levels of risk are recorded on graded early warning or watch lists comprising three categories graded in line with the perceived severity of the risk attached to the lending, and its probability of default. These are updated monthly and circulated to the relevant risk control points. Once listing has taken place, exposure is very carefully monitored and, where appropriate, exposure reductions are effected.

Should an account become impaired, it will normally, but not necessarily, have passed through all three categories, which reflect the need for ever-increasing caution and control. Where an obligor’s financial health gives grounds for concern, it is immediately placed into the

appropriate category. All obligors, regardless of financial health, are subject to a full review of all facilities on, at least, an annual basis. More frequent interim reviews may be undertaken should circumstances dictate.

Warning list balances rose throughout the year as wholesale credit conditions deteriorated across the regions in which Barclays operates.

Within Local Business, accounts that are deemed to have a heightened level of risk, or that exhibit some unsatisfactory features which could affect viability in the short/medium term, are transferred to a separate ‘Caution’ stream. Accounts on the Caution stream are reviewed on at least a quarterly basis, at which time consideration is given to continuing with the agreed strategy, returning the customer to a lower risk refer stream, or instigating recovery/exit action.

Within the personal portfolios, which tend to comprise homogeneous assets, statistical techniques more readily allow potential weaknesses to be monitored on a portfolio basis. This applies in parts of UK Retail Banking, Barclays Wealth, GRCB’s international retail portfolios and Barclaycard. The approach is consistent with the Group’s policy of raising a collective impairment allowance as soon as objective evidence of impairment is identified.

CRLs and PPLs balances by UK and non-UK

Fig. 5: CRLs balances by UK and non-UK £m

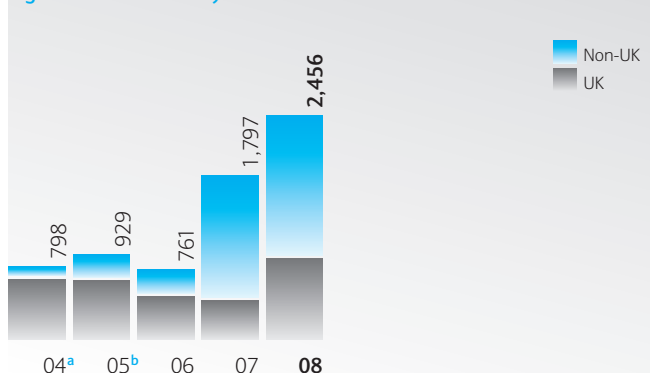

Fig. 6: PPLs balances by UK and non-UK £m

Notes

- a** Does not reflect the application of IAS 32, IAS 39 and IFRS 4 which became effective from 1st January 2005.
- b** From 1st January 2005, the application of IAS 39 required interest to be recognised on the remaining balance of an impaired financial asset (or group of financial assets) at the effective interest rate for that asset. As a result, interest is credited to the income statement

in relation to impaired loans; therefore these loans technically are not classified as ‘non-accrual’. In 2005, the Group replaced the ‘non-accrual’ category with one termed ‘impaired loans’. The SEC requires loans to be classified, where applicable, as non-accrual, accruing past due 90 days or more, ‘troubled debt restructurings’ and potential problem loans.

Potential credit risk loans

In line with disclosure requirements from the Securities Exchange Commission (SEC) in the US, if the credit quality of a loan on an early warning or watch list deteriorates to the highest category, consideration is given to including it within the Potential Problem Loan (PPL) list. PPLs are loans where payment of principal and interest is up to date but where serious doubt exists as to the ability of the borrowers to continue to comply with repayment terms in the near future.

Should further evidence of deterioration be observed, a loan may move to the Credit Risk Loan (CRL) category as required by the SEC. Events that would trigger the transfer of a loan from the PPL to the CRL category could include a missed payment or a breach of covenant. CRLs comprise three classes of loans:

- ‘Impaired loans’ comprise loans where individual identified impairment allowance has been raised and also include loans which are fully collateralised or where indebtedness has already been written down to the expected realisable value. The impaired loan category may include loans, which, while impaired, are still performing.
- The category ‘accruing past due 90 days or more’ comprises loans that are 90 days or more past due as to principal or interest. An impairment allowance will be raised against these loans if the expected cash flows discounted at the effective interest rate are less than the carrying value.
- The category ‘impaired and restructured loans’ comprises loans not included above where, for economic or legal reasons related to the

debtor’s financial difficulties, a concession has been granted to the debtor that would not otherwise be considered. Where the concession results in the expected cash flows discounted at the effective interest rate being less than the loan’s carrying value, an impairment allowance will be raised.

In 2007, the term Credit Risk Loans replaced the term Non-Performing Loans (NPLs) as the collective term for the total of these three classes to recognise the fact that the impaired loan category may include loans which, while impaired, are still performing. This category includes drawn ABS CDO Super Senior positions.

Potential Credit Risk Loans (PCRLs) comprise PPLs and CRLs. Figures 5 and 6 show CRL and PPL balances by UK and non-UK. The amounts are shown before deduction of value of security held, impairment allowances (from 2005 onwards) and provisions or interest suspense (2004), all of which might reduce the impact of an eventual loss, should it occur. The significant increase to non-UK CRL and PPL balances, in 2007 and 2008, is principally due to the inclusion of US-located ABS CDO Super Senior positions and other credit market exposures.

Credit Risk Loans

In 2008, CRLs rose 63% to £15,700m (2007: £9,641m). Balances were higher in all businesses as credit conditions deteriorated across Barclays areas of operations and total loans and advances grew. The most notable increases were in Barclays Capital and the non-UK businesses in Global Retail and Commercial Banking.

CRLs and PPLs as a percentage of Loans and Advances

Fig. 7: CRLs/Loans and Advances Ratio %

Fig. 8: PPLs/Loans and Advances Ratio %

Notes

- a** Does not reflect the application of IAS 32, IAS 39 and IFRS 4 which became effective from 1st January 2005.
- b** From 1st January 2005, the application of IAS 39 required interest to be recognised on the remaining balance of an impaired financial asset (or group of financial assets) at the effective interest rate for that asset. As a result, interest is credited to the income statement

in relation to impaired loans; therefore these loans technically are not classified as ‘non-accrual’. In 2005, the Group replaced the ‘non-accrual’ category with one termed ‘impaired loans’. The SEC requires loans to be classified, where applicable, as non-accrual, accruing past due 90 days or more, ‘troubled debt restructurings’ and potential problem loans.

CRLs in retail secured mortgage products increased by £1,309m (89%) to £2,783m (2007: £1,474m). The key driver was Absa Home Finance where balances increased significantly as a result of higher interest rates and increasing consumer indebtedness. Increases were also seen in UK Home Finance, reflecting weakening UK house prices and the slowing economy, and in Spain, as economic conditions deteriorated.

CRLs in the unsecured and other retail portfolios increased by £1,715m (57%) to £4,725m (2007: £3,010m). The key drivers for this increase were: Absa, which was impacted by higher interest rates and increasing consumer indebtedness, Barclaycard US, due to deteriorating credit conditions which resulted in rising delinquency rates, asset growth and exchange rate movements, and Spain, as economic conditions deteriorated and consumer indebtedness increased.

Corporate/Wholesale CRLs, excluding ABS CDO Super Senior positions, increased by £2,262m (125%) to £4,075m (2007: £1,813m). The key drivers were: Barclays Capital following a number of credit downgrades; increasing default probabilities; and Spain, primarily due to increases to the property-related names. Balances also increased in Barclays Commercial Bank and Absa Commercial and Banking Business as corporate credit conditions deteriorated, particularly in the last quarter of 2008.

CRLs on ABS CDO Super Senior positions increased £773m (23%) to £4,117m (2007: £3,344m). The majority of this increase resulted from a migration of assets, totalling £801m, from potential problem loans (PPLs) to CRLs.

Potential Problem Loans

Balances within the Group's potential problem loans (PPLs) category rose by £659m to £2,456m (31st December 2007: £1,797m). The principal movements were in the corporate and wholesale portfolios, where PPLs rose £1,463m to £1,959m (31st December 2007: £496m) as credit conditions deteriorated. This rise was offset by a fall in PPLs relating to ABS CDO positions, as those balances moved into the CRL category. Broadly flat PPLs from retail portfolios reflected methodology alignments affecting GRCB – Absa which transferred balances of just over £200m previously reported as PPLs to CRLs. This was offset by rises in UK Retail Banking, GRCB – Western Europe and GRCB – Emerging Markets.

Potential Credit Risk Loans

Combining CRLs and PPLs, total potential credit risk loans (PCRL) balances in the corporate and wholesale portfolios increased by 161% in 2008 to £6,034m (31st December 2007: £2,309m) as a number of names migrated into the CRL and PPL categories, reflecting higher default probabilities in the deteriorating global wholesale environment. PCRLs relating to ABS CDO positions remained stable at £4,117m (31st December 2007: £4,145m).

Total retail PCRL balances increased 61% to £8,005m (31st December 2007: £4,984m) as delinquency rates rose across a number of secured and unsecured portfolios following a deterioration in credit conditions, particularly in the UK, US, Spain and South Africa.

Group PCRL balances rose 59% to £18,156m (31st December 2007: £11,438m). Excluding ABS CDO Super Senior positions, PCRLs increased 92% to £14,039m (31st December 2007: £7,293m).

Table 12: Potential credit risk loans and coverage ratios

	CRLs		PPLs		PCRLs	
	31.12.08	31.12.07	31.12.08	31.12.07	31.12.08	31.12.07

Group	15,700	9,641	2,456	1,797	18,156	11,438
	Impairment allowance		CRL coverage		PCRL coverage	
	31.12.08	31.12.07	31.12.08	31.12.07	31.12.08	31.12.07
Retail Secured	561	320	20.2%	21.7%	18.3%	17.9%
Retail Unsecured and other	3,178	2,140	67.3%	71.1%	64.3%	67.0%
Retail	3,739	2,460	49.8%	54.9%	46.7%	49.4%
Corporate/Wholesale (excl ABS)	1,822	1,022	44.7%	56.4%	30.2%	44.3%
Group (excl ABS)	5,561	3,482	48.0%	55.3%	39.6%	47.7%
ABS CDO Super Senior	1,013	290	24.6%	8.7%	24.6%	7.0%
Group	6,574	3,772	41.9%	39.1%	36.2%	33.0%

Impairment Allowances and Coverage Ratios

In 2008, impairment allowances increased 74% to £6,574m (31st December 2007: £3,772m). Excluding ABS CDO Super Senior positions, allowances increased by 60% to £5,561m (31st December 2007: £3,482m). Allowances increased in all businesses as credit conditions deteriorated, but most notably in Barclays Capital and GRCB's international portfolios.

Reflecting this 74% rise in impairment allowance compared with the 63% rise in total CRLs, the Group's CRL coverage ratio rose to 41.9% (31st December 2007: 39.1%). Coverage ratios for PCRLs rose to 36.2% (31st December 2007: 33.0%).

The largest driver for these increases was the near four-fold increase in the impairment held against ABS CDO Super Senior positions as the LGD of these assets increased.

Allowance coverage ratios of CRLs and PCRLs excluding the drawn ABS CDO Super Senior positions decreased to 48.0% (31st December 2007: 55.3%) and 39.6% (31st December 2007: 47.7%), respectively. These movements in coverage ratios reflected:

- An increase in CRLs and PCRLs in the well-secured home loan portfolios.
- Higher CRLs and PCRLs in the corporate sector, where the recovery outlook is relatively high.
- Increased early-cycle delinquent balances in the retail unsecured portfolios, as credit conditions worsened. These earlier-cycle balances, which tend to attract relatively lower impairment requirements, have increased as a proportion of the total delinquent balances.

The decrease in the PCRL coverage ratio, excluding the drawn ABS CDO Super Senior positions, was also driven by the overall increase in PPLs as a proportion of total PCRLs. Since, by definition, PPLs attract lower

levels of impairment than CRLs, a higher proportion of PPLs in total PCRLs will tend to lower the overall coverage ratio.

Allowances for impairment and other credit provisions

Barclays establishes, through charges against profit, impairment allowances and other credit provisions for the incurred loss inherent in the lending book.

Under IFRS, impairment allowances are recognised where there is objective evidence of impairment as a result of one or more loss events that have occurred after initial recognition, and where these events have had an impact on the estimated future cash flows of the financial asset or portfolio of financial assets. Impairment of loans and receivables is measured as the difference between the carrying amount and the present value of estimated future cash flows discounted at the financial asset's original effective interest rate. If the carrying amount is less than the discounted cash flows, then no further allowance is necessary.

Impairment is measured individually for assets that are individually significant, and collectively where a portfolio comprises homogenous assets and where appropriate statistical techniques are available.

In terms of individual assessment, the trigger point for impairment is formal classification of an account as exhibiting serious financial problems and where any further deterioration is likely to lead to failure. Two key inputs to the cash flow calculation are the valuation of all security and collateral, as well as the timing of all asset realisations, after allowing for all attendant costs. This method applies in the corporate portfolios – Barclays Commercial Bank, Barclays Capital and certain areas within GRCB's international portfolios and Barclaycard.

For collective assessment, the trigger point for impairment is the missing of a contractual payment. The impairment calculation is based on a roll-rate approach, where the percentage of assets that move from the initial delinquency to default are derived from statistical probabilities based on experience. Recovery amounts and contractual interest rates are

Fig. 9: Impairment/provisions coverage of CRLs % (including drawn ABS CDO Super Senior positions)

Fig. 10: Impairment/provisions coverage of PCRLs % (including drawn ABS CDO Super Senior positions)

Fig. 11: Impairment/provisions coverage of CRLs % (excluding drawn ABS CDO Super Senior positions)

Fig. 12: Impairment/provisions coverage of PCRLs % (excluding drawn ABS CDO Super Senior positions)

Notes

^a Does not reflect the application of IAS 32, IAS 39 and IFRS 4 which became effective from 1st January 2005.

calculated using a weighted average for the relevant portfolio. This method applies to parts of GRCB's international portfolios, Barclaycard and UK Retail Banking and is consistent with Barclays policy of raising an allowance as soon as impairment is identified.

Unidentified impairment allowances, albeit significantly lower in amount than those reported above, are also raised to cover losses which are judged to be incurred but not yet specifically identified in customer exposures at the balance sheet date, and which, therefore, have not been specifically reported.

The incurred but not yet reported calculation is based on the asset's probability of moving from the performing portfolio to being specifically identified as impaired within the given emergence period and then on to default within a specified period. This is calculated on the present value of estimated future cash flows discounted at the financial asset's original effective interest rate.

The emergence periods vary across businesses and are based on actual experience and are reviewed on an annual basis. This methodology ensures that the Group only captures the loss incurred at the balance sheet date.

These impairment allowances are reviewed and adjusted at least quarterly by an appropriate charge or release of the stock of impairment allowances based on statistical analysis and management judgement.

Where appropriate, the accuracy of this analysis is periodically assessed against actual losses.

As one of the controls of ensuring that adequate impairment allowances are held, movements in impairment allowances to individual names above £10m are presented to the Credit Committee for agreement.

Impairment charges and other credit provisions in 2008

In 2008, total impairment charges increased 94% (£2,624m) to £5,419m (2007: £2,795m). This figure included impairment charges of £506m (2007: £13m) on available for sale assets and reverse repurchase agreements.

Impairment charges on loans and advances and other credit provisions increased 77% (£2,131m) to £4,913m (2007: £2,782m) (see table 1 on page 89) reflecting charges of £1,763m against ABS CDO Super Senior and other credit market exposures and increased impairment in the international portfolios within Global Retail and Commercial Banking. Total loans and advances grew 33% to £516,096m (31st December 2007: £389,290m). As a result, impairment charges on loans and advances and other credit provisions as a percentage of period end Group total loans and advances increased to 0.95% (2007: 0.71%).

In the retail portfolios, impairment charges on loans and advances and other credit provisions rose 45% (£728m) to £2,333m (2007: £1,605m) (see table 1 on page 89) principally as a consequence of increased impairment in the international portfolios, whilst total loans and advances increased 24% to £201,588m (31st December 2007: £162,081m). As a result, impairment charges as a percentage of period end total loans and advances increased to 1.16% (2007: 0.99%).

In the wholesale and corporate portfolios, impairment charges on loans and advances and other credit provisions rose by 119% (£1,403m) to £2,580m (2007: £1,177m) (see table 1 on page 89) whilst total loans and advances increased 38% to £314,508m (31st December 2007: £227,209m). As a result, impairment charges as a percentage of period end total loans and advances increased to 0.82% (2007: 0.52%).

Global Retail and Commercial Banking

Impairment charges in UK Retail Banking increased £43m to £602m (2007: £559m), reflecting growth in the book and deteriorating economic conditions. In UK Home Finance, whilst three month arrears increased from 0.63% to 0.91%, the quality of the book and conservative loan to value ratios meant that the impairment charges and amounts charged off remained low at £24m (2007: £3m release). Impairment charges in Consumer Lending increased 3% reflecting the current economic environment and loan growth.

Fig. 13: Impairment/provisions charges over five years £m

Note

^a 2004 does not reflect the application of IAS 32, IAS 39 and IFRS 4 which became effective from 1st January 2005.

Table 13: Impairment Charges and Other Credit Provisions

	Year Ended 31.12.08 £m	Year Ended 31.12.07 £m
UK Retail Banking	602	559
Barclays Commercial Bank	414	292
Barclaycard	1,097	827
GRCB – Western Europe	296	76
GRCB – Emerging Markets	166	39
GRCB – Absa	347	146
Barclays Capital	419	64
Barclays Wealth	44	7
Head office functions and other operations	11	3
Group Total	3,396	2,013
ABS CDO Sub-Prime and other credit Market Provisions	1,763	782
Group Total (Including ABS CDO)	5,159	2,795
Other AFS Assets and Reverse Repos	260	–
Group Total (Including ABS CDO and AFS/Reverse Repos)	5,419	2,795

The impairment charge in Barclays Commercial Bank increased £122m to £414m (2007: £292m), primarily reflecting higher impairment losses in Larger Business, particularly in the final quarter as the UK corporate credit environment deteriorated.

The impairment charge in Barclaycard increased £270m (33%) to £1,097m (2007: £827m), reflecting higher charges in Barclaycard International portfolios, particularly Barclaycard US which was driven by loan growth, rising delinquency due to deteriorating economic conditions and exchange rate movements; and £68m from the inclusion of Goldfish. These factors were partially offset by lower charges in UK Cards and secured consumer lending.

Impairment charges in GRCB – Western Europe increased £220m to £296m (2007: £76m) principally due to deteriorating economic trends and asset growth in Spain, where there were higher charges in the commercial portfolios as a consequence of the slowdown in the property and construction sectors. In addition higher household indebtedness and rising unemployment has driven up delinquency and charge-offs in the personal sector.

Impairment charges in GRCB – Emerging Markets increased £127m to £166m (2007: £39m), reflecting: weakening credit conditions which adversely impacted delinquency trends in the majority of the retail portfolios; asset growth, particularly in India; and increased wholesale impairment in Africa.

Impairment charges in GRCB – Absa increased £201m to £347m (2007: £146m) as a result of rising delinquency levels in the retail portfolios, which have been impacted by rising interest and inflation rates and increasing consumer indebtedness.

Investment Banking and Investment Management

Barclays Capital impairment charges of £2,423m (2007: £846m) included a charge of £1,763m (2007: £782m) against ABS CDO Super Senior and other credit market positions. Further impairment charges of £241m were incurred in respect of available for sale assets and reverse repurchase

agreements (2007: £nil). Other impairment charges increased £355m to £419m (2007: £64m) and primarily related to charges in the private equity and other loans business.

The impairment charge in Barclays Wealth increased £37m to £44m (2007: £7m) from a very low base. This increase reflected both the substantial increase in the loan book over the last three years and the impact of the current economic environment on client liquidity and collateral values.

The impairment charge in Head Office Functions and Other Operations increased £8m to £11m (2007: £3m) mainly reflecting losses on Floating Rate Notes held for hedging purposes. An additional £19m (2007: £nil) of impairment charges were incurred on available for sale assets.

Writing-off of assets

After an advance has been identified as impaired and is subject to an impairment allowance, the stage may be reached whereby it is concluded that there is no realistic prospect of further recovery. Write-off will occur when, and to the extent that, the whole or part of a debt is considered irrecoverable.

The timing and extent of write-offs may involve some element of subjective judgement. Nevertheless, a write-off will often be prompted by a specific event, such as the inception of insolvency proceedings or other formal recovery action, which makes it possible to establish that some or the entire advance is beyond realistic prospect of recovery. In any event, the position of impaired loans is reviewed at least quarterly to ensure that irrecoverable advances are being written off in a prompt and orderly manner and in compliance with any local regulations.

Such assets are only written off once all the necessary procedures have been completed and the amount of the loss has been determined.

Subsequent recoveries of amounts previously written off are written back and hence decrease the amount of the reported loan impairment charge in the income statement.

Total write-offs of impaired financial assets increased by £956m to £2,919m (2007: £1,963m).

Fig. 14: Total write-offs of impaired financial assets £m

Note

^a Does not reflect the application of IAS 32, IAS 39 and IFRS 4 which became effective from 1st January 2005.

Credit risk management

Risk Tendency

In 2008, Risk Tendency increased 58% (£1,355m) to £3,710m (31st December 2007: £2,355m), compared with 32% growth in the Group's loans and advances balances. This was reflective of the higher credit risk profile, weakening credit conditions across our main businesses, and changing mix, as a consequence of planned growth, in a number of businesses and portfolios. Risk Tendency in 2008 also increased as a result of the weakening of Sterling against a number of other foreign currencies, including the US Dollar and the Euro.

UK Retail Banking Risk Tendency increased £50m to £520m (31st December 2007: £470m). This reflected a higher risk profile in the unsecured and secured loans portfolios, weakening UK credit conditions, and asset growth, primarily in the Home Finance portfolio.

Risk Tendency in Barclays Commercial Bank increased £95m to £400m (31st December 2007: £305m). This reflected the deteriorating UK corporate credit environment and asset growth.

Barclaycard Risk Tendency increased £520m to £1,475m (31st December 2007: £955m) primarily reflecting the inclusion of new business acquisitions (£260m) as well as asset growth, exchange rate movements, and the economic conditions in the US. Risk Tendency in the UK Cards portfolio remained stable as improvements in portfolio quality were offset by deterioration in the UK economic environment.

Risk Tendency at GRCB – Western Europe increased £135m to £270m (31st December 2007: £135m) principally reflecting weakening credit conditions across Europe, particularly in Spain, asset growth and movements in the Euro/Sterling exchange rate.

Risk Tendency at GRCB – Emerging Markets increased £210m to £350m (31st December 2007: £140m) reflecting weakening credit conditions across the majority of regions, a change in the risk profile following a broadening of the product offering through new product launches and new market entry in India and UAE, and asset growth.

Risk Tendency at GRCB – Absa increased £65m to £255m (31st December 2007: £190m) reflecting weakening retail and, to a lesser extent, corporate credit conditions in South Africa and asset growth and movements in the Rand/Sterling exchange rate.

Risk Tendency in Barclays Capital increased £275m to £415m (31st December 2007: £140m) reflecting credit downgrades and asset growth. The drawn liquidity facilities on ABS CDO Super Senior positions are classified as credit risk loans and therefore no Risk Tendency is calculated on them.

Risk Tendency at Barclays Wealth increased £10m to £20m (31st December 2007: £10m) reflecting a weakening credit risk profile and asset growth.

Risk Tendency by business £m

Notes

^a Excludes ABS CDO Super Senior positions as these are classified as credit risk loans and therefore no Risk Tendency is calculated on them.

^b Head office functions and other operations comprise discontinued businesses in transition.

The following table presents an analysis of the credit quality of debt and similar securities, other than loans held within the Group. Securities rated as investment grade amounted to 91.6% of the portfolio (2007: 88.0%).

The use of derivatives and their sale to customers as risk management products are an integral part of the Group's trading activities. These instruments are also used to manage the Group's own exposure to fluctuations in interest, exchange rates and commodity and equity prices as part of its asset and liability management activities.

Barclays Capital manages the trading derivatives book as part of the market risk book. This includes foreign exchange, interest rate, equity, commodity and credit derivatives. The policies regarding market risk management are outlined in the market risk management section on pages 119 to 123.

Derivative instruments are contracts whose value is derived from one or more underlying financial instruments or indices defined in the contract. They include swaps, forward rate agreements, futures, options and combinations of these instruments and primarily affect the Group's net interest income, net trading income, net fee and commission income and derivative assets and liabilities. Notional amounts of the contracts are not recorded on the balance sheet.

The Group participates both in exchange traded and over the counter derivatives markets.

Exchange traded derivatives

The Group buys and sells financial instruments that are traded or cleared on an exchange, including interest rate swaps, futures and options on futures. Holders of exchange traded instruments provide margin daily with cash or other security at the exchange, to which the holders look for ultimate settlement.

Over the counter traded derivatives

The Group also buys and sells financial instruments that are traded over the counter, rather than on a recognised exchange.

These instruments range from commoditised transactions in derivative markets, to trades where the specific terms are tailored to the requirements of the Group's customers. In many cases, industry standard documentation is used, most commonly in the form of a master agreement, with individual transaction confirmations. The existence of a signed master agreement is intended to give the Group protection in situations where a counterparty is in default.

Foreign exchange derivatives

The Group's principal exchange rate related contracts are forward foreign exchange contracts, currency swaps and currency options. Forward foreign exchange contracts are agreements to buy or sell a specified quantity of foreign currency, usually on a specified future date at an agreed rate. A currency swap generally involves the exchange, or notional exchange, of equivalent amounts of two currencies and a commitment to exchange interest periodically until the principal amounts are re-exchanged on a future date.

Currency options provide the buyer with the right, but not the obligation, either to purchase or sell a fixed amount of a currency at a specified exchange rate on or before a future date. As compensation for assuming the option risk, the option writer generally receives a premium at the start of the option period.

Interest rate derivatives

The Group's principal interest rate related contracts are interest rate swaps, forward rate agreements, basis swaps, caps, floors and swaptions. Included in this product category are transactions that include combinations of these features.

An interest rate swap is an agreement between two parties to exchange fixed rate and floating rate interest by means of periodic payments based upon a notional principal amount and the interest rates defined in the contract. Certain agreements combine interest rate and foreign currency swap transactions, which may or may not include the exchange of principal amounts. A basis swap is a form of interest rate swap, in which both parties exchange interest payments based on floating rates, where the floating rates are based upon different underlying reference indices. In a forward rate agreement, two parties agree a future settlement of the difference between an agreed rate and a future interest rate, applied to a notional principal amount. The settlement, which generally occurs at the start of the contract period, is the discounted present value of the payment that would otherwise be made at the end of that period.

Credit derivatives

The Group's principal credit derivative-related contracts include credit default swaps and total return swaps. A credit derivative is an arrangement whereby the credit risk of an asset (the reference asset) is transferred from the buyer to the seller of protection.

A credit default swap is a contract where the protection seller receives premium or interest-related payments in return for contracting to make payments to the protection buyer upon a defined credit event. Credit events normally include bankruptcy, payment default on a reference asset or assets, or downgrades by a rating agency.

A total return swap is an instrument whereby the seller of protection receives the full return of the asset, including both the income and change in the capital value of the asset. The buyer in return receives a predetermined amount.

Equity derivatives

The Group's principal equity-related contracts are equity and stock index swaps and options (including warrants, which are equity options listed on an exchange). An equity swap is an agreement between two parties to exchange periodic payments, based upon a notional principal amount, with one side paying fixed or floating interest and the other side paying based on the actual return of the stock or stock index. An equity option provides the buyer with the right, but not the obligation, either to purchase or sell a specified stock, basket of stocks or stock index at a specified price or level on or before a specified date. The Group also enters into fund-linked derivatives, being swaps and options whose underlyings include mutual funds, hedge funds, indices and multi-asset portfolios.

Commodity derivatives

The Group's principal commodity-related derivative contracts are swaps, options, forwards and futures. The main commodities transacted are base metals, precious metals, oil and oil-related products, power and natural gas.

The tables below set out the fair values of the derivative assets together with the value of those assets subject to enforceable counterparty netting arrangements for which the Group holds offsetting liabilities and eligible collateral.

	Gross assets £m	Counterparty netting £m	Net exposure £m
Derivative assets – As at 31.12.08			
Foreign exchange	107,730	91,572	16,158
Interest rate	615,321	558,985	56,336
Credit derivatives	184,072	155,599	28,473
Equity and stock index	28,684	20,110	8,574
Commodity derivatives	48,995	35,903	13,092
	984,802	862,169	122,633
Total collateral held			54,905
Net exposure less collateral			67,728
Derivative assets – As at 31.12.07			
Foreign exchange	30,824	22,066	8,758
Interest rate	140,504	117,292	23,212
Credit derivatives	38,696	31,307	7,389
Equity and stock index	13,296	12,151	1,145
Commodity derivatives	24,768	15,969	8,799
	248,088	198,785	49,303
Total collateral held			16,700
Net exposure less collateral			32,603

Gross derivative assets of £985bn (2007: £248bn) cannot be netted down under IFRS. Derivative assets would be £91.7bn (2007: £21.5bn) lower than reported under IFRS if counterparty or collateral netting were allowed.

Exposure relating to derivatives, repurchase agreements, reverse repurchase agreements, stock borrowing and loan transactions is calculated using internal, FSA approved models. These are used as the basis to assess both regulatory capital and capital appetite and are managed on a daily basis. The methodology encompasses all relevant factors to enable the current value to be calculated and the future value to be estimated, for example: current market rates, market volatility and legal documentation (including collateral rights).

Credit risk management

Barclays Capital credit market exposures

Barclays Capital's credit market exposures primarily relate to US residential mortgages, commercial mortgages and leveraged finance businesses that have been significantly impacted by the continued deterioration in the global credit markets. The exposures include both significant positions subject to fair value movements in the profit and loss account and positions that are classified as loans and advances and available for sale. None of the exposure disclosed below has been reclassified to loans and advances under the amendments to IAS 39.

The exposures are set out by asset class in US Dollars and Sterling below:

CDPCs	C3	218	39	150	19
CLO and other exposure wrapped by monoline insurers	C4	7,202	817	4,939	408

These exposures have been actively managed during the year in an exceptionally challenging market environment and have been reduced by net sales and paydowns of £6,311m, offset by the 37% appreciation of the US Dollar against Sterling. In January 2009, there was an additional sale of £3,056m of leveraged finance exposure which was repaid at par. Exposures at 31st December 2008 included £1,060m of securities from the acquisition of Lehman Brothers North American businesses. Exposures wrapped by monolines have increased during the course of 2008 as a result of declines in the fair value of the underlying assets.

Notes

^a As the majority of exposure is held in US Dollars the exposures above are shown in both US Dollars and Sterling.

^b Included within the total leveraged finance exposure of £10,391m is £1,030m of off-balance sheet commitments.

There were gross losses of £8,053m (2007: £2,999m) in the year to 31st December 2008. These losses were partially offset by related income and hedges of £1,433m (2007: £706m), and gains of £1,663m (2007: £658m) from the general widening of credit spreads on issued notes measured at fair value through the profit and loss account.

The gross losses, which included £1,763m (2007: £782m) in impairment charges, comprised: £5,584m (2007: £2,811m) against US RMBS exposures; £1,488m (2007: £14m) against commercial mortgage exposures; and £981m (2007: £174m) against other credit market exposures.

A. US Residential Mortgages

US residential mortgage exposures have reduced by 41% in US Dollar terms, and 19% in Sterling terms, since 31 st December 2007.

A1. ABS CDO Super Senior

During the year ABS CDO Super Senior exposures reduced by £1,567m to £3,104m (31 st December 2007: £4,671m). Net exposures are stated after write-downs and charges of £1,461m incurred in 2008 (2007: £1,816m) and hedges of £nil (31 st December 2007: £1,347m). There were no hedges in place at 31 st December 2008 as the corresponding liquidity facilities had been terminated. There were liquidations and paydowns of £2,318m in the year; weaker Sterling and a reduction in hedges increased exposure by £865m and £1,347m respectively.

The remaining ABS CDO Super Senior exposure at 31 st December 2008 comprised five high grade liquidity facilities which were fully drawn and classified within loans and receivables, and no remaining mezzanine exposure. At 31 st December 2007 there were 15 facilities of which nine were high grade and six mezzanine.

The impairment assessment of remaining super senior positions is based on cash flow methodology using standard market assumptions such as default curves and remittance data to calculate the net present value of the future losses for the collateral pool over time. As a result, future potential impairment charges depend on changes in these assumptions.

We have included all ABS CDO Super Senior exposure in the US residential mortgages section as nearly 90% of the underlying collateral relates to US RMBS. The impairment applied to the notional collateral is set out in the table below.

Net exposure	3,104	3,104	3,909	762	4,671		
Collateral marks including liquidated structures						32%	62%

Note

^a Marks above reflect the gross exposure after the impairment and subordination and do not include the benefit of hedges. The change in marks since 31 st December 2007 primarily results from the liquidation during 2008 of the most impaired structures.

Consolidated collateral of £8.4bn relating to the ten CDOs that were liquidated in 2008 has been sold or are stated at fair value net of hedges within Other US sub-prime, Alt-A and CMBS exposures. The notional collateral remaining at 31 st December 2008 is marked at approximately 12%. The collateral valuation for all ABS CDO Super Senior deals, including those liquidated and consolidated in 2008, is approximately 32% (31 st December 2007: 62%).

The collateral for the outstanding ABS CDO Super Senior exposures primarily comprises residential mortgage backed securities (RMBS). At 31 st December 2008 the residual exposure contains a higher proportion of collateral originated in 2005 and earlier than at 31 st December 2007. There is minimal exposure to collateral originated in 2007 or later. The vintages of the sub-prime, Alt-A and US RMBS collateral are set out in the table below.

	As at 31.12.08	As at 31.12.07
Sub-prime Collateral by Vintage		
2005 and earlier	71%	54%
2006	27%	41%
2007 and 2008	2%	5%
Alt-A Collateral by Vintage

Total	3,441	5,037		

The majority of Other US sub-prime exposures are measured at fair value through profit and loss. US sub-prime securities held in conduits and a collateralised debt obligation (CDO) are categorised as available for sale and are recognised in equity.

Exposure declined from £5,037m to £3,441m driven by gross losses of £1,728m and net sales, paydowns and other movements of £1,649m. Weaker Sterling resulted in an increase in exposure of £1,086m. Exposures at 31st December 2008 included assets acquired from Lehman Brothers North American businesses of £83m in AAA securities and £124m in other US sub-prime securities.

At 31st December 2008, 82% of the whole loan exposure was performing. Whole loans included £1,422m (31st December 2007: £2,843m) acquired on or originated since the acquisition of EquiFirst in March 2007. Of this balance, £281m of new sub-prime loans were originated in 2008. At 31st December 2008, the average loan to value at origination of all the sub-prime whole loans was 79%. Loans guaranteed by Federal Housing Administration (FHA) are not included in the exposure above. An FHA loan is a mortgage loan fully insured by the US Federal Housing Administration and therefore not considered to be a credit sensitive product. EquiFirst has only originated FHA eligible loans since April 2008, and held £132m of these loans at 31st December 2008.

Securities included £37m held by consolidated conduits and £110m held in a CDO on which impairment charges of £16m and £53m respectively have been recorded.

Other exposures with underlying sub-prime collateral include counterparty derivative exposures to vehicles which hold sub-prime collateral. Derivatives of £643m (31st December 2007: £333m) relate to US Dollar denominated interest rate swaps. The increase in the balance principally relates to the decline in interest rates globally and the 37% depreciation of Sterling relative to the US Dollar, especially in the second half of 2008. The majority of all other exposures with underlying sub-prime collateral was the most senior obligation of the vehicle.

A3. Alt-A

	As at 31.12.08 £m	As at 31.12.07 £m	Marks at 31.12.08	Marks at 31.12.07
AAA securities	1,847	3,553	43%	87%
Other Alt-A securities	1,265	208	9%	75%
Whole Loans	776	909	67%	97%
Residuals	2	25	6%	66%
Derivative exposure with underlying Alt-A collateral	398	221	100%	100%
Total	4,288	4,916		

Alt-A securities, whole loans and residuals are measured at fair value through profit and loss. Alt-A securities held in conduits and a collateralised debt obligation (CDO) are categorised as available for sale and are recognised in equity.

Net exposure to the Alt-A market was £4,288m (31 st December 2007: £4,916m), through a combination of whole loans, securities and residuals, including those held in consolidated conduits. There were gross losses of £1,983m in the year and net sales, paydowns and other movements of £181m. Weaker Sterling resulted in an increase in exposure of £1,190m. Exposures at 31 st December 2008 included assets acquired from Lehman Brothers North American businesses of £300m in AAA securities and £324m in other Alt-A securities.

Securities included £491m held by consolidated conduits and £89m held in a CDO on which impairment charges of £65m and £58m respectively have been recorded.

At 31 st December 2008, 75% of the Alt-A whole loan exposure was performing, and the average loan to value ratio at origination was 81%.

Other exposures with underlying Alt-A collateral include counterparty derivative exposures to vehicles which hold Alt-A collateral. Derivative exposures with underlying Alt-A collateral of £398m (31 st December 2007: £221m) relate to US Dollar denominated interest rate swaps. The increase in the balance principally relates to the decline in interest rates globally and the 37% depreciation of Sterling relative to the US Dollar, especially in the second half of 2008. The majority of this exposure was the most senior obligation of the vehicle.

A4. US Residential Mortgage Backed Securities Exposure Wrapped by Monoline Insurers

The deterioration in the US residential mortgage market has resulted in exposure to monoline insurers and other financial guarantors that provide credit protection.

The table below shows RMBS assets where we held protection from monoline insurers at 31 st December 2008. These are measured at fair value through profit and loss. Declines in fair value of the underlying assets are reflected in increases in the value of potential claims against monoline insurers. Such declines have resulted in net exposure to monoline insurers under these contracts increasing to £1,639m by 31 st December 2008 (2007: £730m).

Claims would become due in the event of default of the underlying assets and losses would only be realised if both the underlying asset and monoline defaulted. At 31 st December 2008 while 81% of the underlying assets were non-investment grade, 97% are wrapped by monolines with investment grade ratings.

There is some uncertainty whether all of the monoline insurers would be able to meet all liabilities if such claims were to arise: certain monoline insurers have been subject to downgrades in 2008. Consequently, a fair value loss of £412m has been recognised in the year. There have been no claims due under these contracts as none of the underlying assets were in default at 31 st December 2008.

The fair value is determined by a credit valuation adjustment calculation which incorporates stressed cash flow shortfall projections, current market valuations, stressed Probability of Default (PDs) and a range of Loss Given Default (LGD) assumptions. The cash flow shortfall projections are stressed to ensure that we consider the potential for further market deterioration and resultant additional cash flow shortfall in underlying collateral. Monoline ratings are based on external ratings analysis and where appropriate significant internal analysis conducted by the independent Credit Risk function. In addition, we reflect the potential for further deterioration of monolines by using stressed PDs which results in all monolines having an implied sub-investment grade rating. LGDs range from 45% to 100% depending on the monoline.

Exposure by Credit Rating of Monoline Insurer

	As at 31.12.08				
	Notional £m	Fair Value of Underlying Asset £m	Fair Value Exposure £m	Credit Valuation Adjustment £m	Net Exposure £m

B. Commercial Mortgages

Commercial mortgages reduced 18% in US Dollar terms. In Sterling terms these increased by 12%.

B1. Commercial Mortgages

Exposures in Barclays Capital's commercial mortgages portfolio, all of which are measured at fair value, comprised commercial real estate loan exposure of £11,578m (31st December 2007: £11,103m) and commercial mortgage-backed securities (CMBS) of £735m (31st December 2007: £1,296m). During the year there were gross losses of £1,148m. Gross sales and paydowns of £1,034m in the UK and Continental Europe and £2,167m in the US were partially offset by additional drawdowns. Weaker Sterling increased exposure by £3,058m.

The commercial real estate loan exposure comprised 55% US, 41% UK and Europe and 4% Asia. 5% of the total relates to land or property under construction.

The US exposure included two large transactions which comprised 42% of the total US exposure and have paid down approximately £789m in the year. The remaining 58% of the US exposure comprised 76 transactions. The remaining weighted average number of years to initial maturity of the US portfolio is 1.4 years.

The UK and Europe portfolio is well diversified with 64 transactions in place as at 31st December 2008. In Europe protection is provided by loan covenants and periodic LTV retests, which cover 90% of the portfolio. 47% of the German exposure relates to one transaction secured on multifamily residential assets. Exposure to the Spanish market represents less than 1% of global exposure at 31st December 2008.

B1. Commercial Mortgages (continued)

Commercial Mortgage Backed Securities (net of hedges)

	As at 31.12.08 £m	As at 31.12.07 £m	Marks ^a at 31.12.08	Marks ^a at 31.12.07
AAA securities	588	1,008		
Other securities	147	288		
Total	735	1,296	21%	98%

Exposure is stated net of hedges traded in the liquid index swap market with market counterparties. The counterparty exposure is managed through a standard derivative collateralisation process and none of the hedge counterparties are monoline insurers.

Exposures at 31 st December 2008 included assets acquired from Lehman Brothers North American businesses of £143m in AAA securities and £86m in other securities.

B2. CMBS Exposure Wrapped by Monoline Insurers

The deterioration in the commercial mortgage market has resulted in exposure to monoline insurers and other financial guarantors that provide credit protection.

The table below shows Commercial Mortgage Backed Security (CMBS) assets where we held protection from monoline insurers at 31 st December 2008. These are measured at fair value through profit and loss. Declines in fair value of the underlying assets are reflected in increases in the value of potential claims against monoline insurers. Such declines have resulted in net exposure to monoline insurers under these contracts increasing to £1,854m by 31 st December 2008 (31 st December 2007: £197m).

Claims would become due in the event of default of the underlying assets and losses would only be realised if both the underlying asset and monoline defaulted. At 31 st December 2008 all underlying assets were rated AAA/AA and 89% are wrapped by monolines with investment grade ratings.

There is some uncertainty whether all of the monoline insurers would be able to meet all liabilities if such claims were to arise: certain monoline insurers have been subject to downgrades in 2008. Consequently, a fair value loss of £340m has been recognised in the year. There have been no claims due under these contracts as none of the underlying assets were in default at 31 st December 2008.

The fair value is determined by a credit valuation adjustment calculation which incorporates stressed cash flow shortfall projections, current market valuations, stressed Probability of Default (PDs) and a range of Loss Given Default (LGD) assumptions. The cash flow shortfall projections are stressed to ensure that we consider the potential for further market deterioration and resultant additional cash flow shortfall in underlying collateral. Monoline ratings are based on external ratings analysis and where appropriate significant internal analysis conducted by the independent Credit Risk function. In addition, we reflect the potential for further deterioration of monolines by using stressed PDs which results in all monolines having an implied sub-investment grade rating. LGDs range from 45% to 100% depending on the monoline.

Exposure by credit rating of monoline insurer

	As at 31.12.08				
	Notional £m	Fair value of underlying asset £m	Fair value exposure £m	Credit valuation adjustment £m	Net exposure £m

CMBS	3,752	–	–	3,752

C. Other credit market exposures

In the year ended 31 st December 2008 these exposures increased by 17% in US Dollar terms, and 61 % in Sterling terms.

C1. Leveraged Finance

Leveraged loans are classified within loans and advances and are stated at amortised cost less impairment. The overall credit performance of the assets remains satisfactory.

At 31 st December 2008, the gross exposure relating to leveraged finance loans was £10,506m (31 st December 2007: £9,217m). Barclays Capital expects to hold these leveraged finance positions until redemption. Material movements since 31 st December 2007 reflect exchange rate changes rather than changes in loan positions.

The net exposure relating to leverage finance loans of £10,391 m (31 st December 2007: £9,027m) was reduced to £7,335m following a repayment of £3,056m at par in January 2009.

Leveraged Finance Exposure by Region

Other	329	168	497	233	327	560
Total	9,476	1,030	10,506	7,627	1,590	9,217

New leveraged finance commitments originated after 30th June 2007 comprised £573m (31 st December 2007: £1,148m).

Note

^a The movement in impairment during the period is primarily due to the release of the provision on the post year end repayment, for which there was a binding commitment as at 31 st December 2008.

C2. SIVs and SIV-Lites

SIVs/SIV-Lites	As at 31.12.08 £m	As at 31.12.07 £m	Marks at 31.12.08	Marks at 31.12.07
Liquidity facilities	679	466	62%	100%
Bond inventory	11	52	7%	37%
Derivatives	273	266		
Total	963	784		

SIV exposure increased from £784m to £963m during the year. There were £230m of gross losses against SIVs and SIV lites in the year. Weaker Sterling resulted in an increase in exposure of £281m.

At 31st December 2008 liquidity facilities of £679m (31st December 2007: £466m) include £531m designated at fair value through profit and loss relating to a SIV-lite which had previously been hedged with Lehman Brothers. Following the Lehman Brothers bankruptcy this facility was reflected as a new exposure to the underlying assets. The remaining £148m represented drawn liquidity facilities in respect of SIV-lites and other structured investment vehicles classified as loans and advances stated at cost less impairment.

Bond inventory and derivatives are fair valued through profit and loss.

Movement in derivative exposure primarily related to CDS exposure due to general spread widening. At 31st December 2008 exposure was broadly in line with the prior year.

C3. CDPC exposure

Credit derivative product companies ('CDPCs') are specialist providers of credit protection principally on corporate exposures in the form of credit derivatives. The Group has purchased protection from CDPCs against a number of securities with a notional value of £1,772m. The fair value of the exposure to CDPCs at 31st December 2008 was £150m. A fair value loss of £14m has been recognised in the year.

Of the notional exposure, 45% related to AAA/AA rated counterparties, with the remainder rated A/BBB.

Exposure by credit rating of CDPC

	As at 31.12.08			
	Notional £m	Gross exposure £m	Credit valuation adjustment £m	Net exposure £m
AAA/AA	796	77	(14)	63
A/BBB	976	87	-	87
Total	1,772	164	(14)	150
		As at 31.12.07		
AAA/AA	1,262	19	-	19

C4. CLO and other exposure wrapped by monoline insurers

The table below shows Collateralised Loan Obligations (CLOs) and other assets where we held protection from monoline insurers at 31st December 2008. The deterioration in markets for these assets has resulted in exposure to monoline insurers and other financial guarantors that provide credit protection. These are measured at fair value through profit and loss. Declines in fair value of the underlying assets are reflected in increases in the value of potential claims against monoline insurers. Such declines have resulted in net exposure to monoline insurers under these contracts increasing to £4,939m by 31st December 2008 (31st December 2007: £408m).

Claims would become due in the event of default of the underlying assets and losses would only be realised if both the underlying asset and monoline defaulted. At 31st December 2008 all of the underlying assets have investment grade ratings and 39% are wrapped by monolines rated AAA/AA. 87% of the underlying assets were CLOs, all of which were rated AAA/AA.

There is some uncertainty whether all of the monoline insurers would be able to meet all liabilities if such claims were to arise: certain monoline insurers have been subject to downgrades in 2008. Consequently, a fair value loss of £737m, has been recognised in the year. There have been no claims due under these contracts as none of the underlying assets were in default at 31st December 2008.

The fair value is determined by a credit valuation adjustment calculation which incorporates stressed cash flow shortfall projections, current market valuations, stressed Probability of Default (PDs) and a range of Loss Given Default (LGD) assumptions. The cash flow shortfall projections are stressed to ensure that we consider the potential for further market deterioration and resultant additional cash flow shortfall in underlying collateral. Monoline ratings are based on external ratings analysis and where appropriate significant internal analysis conducted by the independent Credit Risk function. In addition, we reflect the potential for further deterioration of monolines by using stressed PDs for non-AAA rated monolines, which results in all other monolines having an implied sub-investment grade rating. LGDs range from 45% to 100% depending on the monoline.

Exposure by credit rating of monoline insurer

	As at 31.12.08

Own credit

The carrying amount of issued notes that are designated under the IAS 39 fair value option is adjusted to reflect the effect of changes in own credit spreads. The resulting gain or loss is recognised in the income statement.

At 31st December 2008, the own credit adjustment arose from the fair valuation of £54.5bn of Barclays Capital structured notes (31st December 2007: £40.7bn). The widening of Barclays credit spreads in the year affected the fair value of these notes and as a result revaluation gains of £1,663m were recognised in trading income (2007: £658m).

Market risk is the risk that Barclays earnings or capital, or its ability to meet business objectives, will be adversely affected by changes in the level or volatility of market rates or prices such as interest rates, credit spreads, commodity prices, equity prices and foreign exchange rates. Market risk mainly arises from trading activities. Barclays is also exposed to market risk through non-traded interest rate risk and the pension fund.

Barclays market risk objectives are to:

- Understand and control market risk by robust measurement and the setting of position limits.
- Facilitate business growth within a controlled and transparent risk management framework.
- Ensure traded market risk resides primarily in Barclays Capital.
- Minimise non-traded market risk.

The Board approves market risk appetite for trading and non-trading activities. The Market Risk Director is responsible for the Market Risk Control Framework and, under delegated authority from the Group Risk Director, sets a limit framework within the context of the approved market risk appetite. A daily market risk report summarises Barclays market risk exposures against agreed limits. This daily report is sent to the Group Risk Director, the Market Risk Director, the Group Finance Director and the appropriate Business Risk Directors.

The head of each business, assisted by the business risk management team, is accountable for all market risks associated with its activities. Each business is responsible for the identification, measurement, management, control and reporting of market risk as outlined in Barclays Market Risk Control Framework. Oversight and

support is provided to the business by the Market Risk Director, assisted by the central market risk team. The Market Risk Committee reviews, approves, and makes recommendations concerning the market risk profile across Barclays including risk appetite, limits and utilisation. The Committee meets monthly and is chaired by the Market Risk Director. Attendees include the Group Risk Director, respective business risk managers and senior managers from the central market risk team.

In Barclays Capital, the Head of Market Risk is responsible for implementing the market risk control framework. Day to day responsibility for market risk lies with the senior management of Barclays Capital, supported by the Market Risk Management team that operates independently of the trading areas. Daily market risk reports are produced for Barclays Capital as a whole as well as for the main business areas. The risks covered include interest rate, credit spread, commodity, equity and foreign exchange. A more detailed trading market risk presentation is produced fortnightly and discussed at the Barclays Capital Traded Positions Risk Review meeting. The attendees at this meeting include the Group Risk Director and senior managers from Barclays Capital and the central market risk team.

In Global Retail and Commercial Banking, each of the six main business areas (UK Retail Banking, Barclays Commercial Bank, Barclaycard, Western Europe, Emerging Markets and Absa) has its own market risk department. The head of each department is responsible for implementing the Market Risk Control Framework, with oversight provided by the central market risk team. A combination of daily and monthly risk reports are sent to the central market risk team. A risk summary is presented at Market Risk Committee and the respective Asset and Liability Committees.

Global Retail and Commercial Banking is responsible for non-structural non-trading interest rate risk and Group Treasury is responsible for structural risk (interest rate and foreign exchange). The chart below gives an overview of the business control structure.

Overview of the business control structure

Risk type	...managed by	and reviewed by Group Market Risk and...

Market Risk Director

Barclays policy is to concentrate trading activities in Barclays Capital. This includes transactions where Barclays Capital acts as principal with clients or with the market. For maximum efficiency, client and market activities are managed together. In Barclays Capital, trading risk occurs in both the trading book and the banking book, as defined for regulatory purposes.

Risk measurement and control

The measurement techniques used to measure and control traded market risk include Daily Value at Risk (DVaR), Expected Shortfall (ES), stress testing and scenario testing. Book limits such as foreign exchange and interest rate delta limits are also in place.

Daily Value at Risk is an estimate of the potential loss arising from unfavourable market movements, if the current positions were to be held unchanged for one business day. Barclays Capital uses the historical simulation method with a two year unweighted historical period.

In 2008, the confidence level was changed to 95% from 98% as an increasing incidence of significant market movements made the existing measure more volatile and less effective for risk management purposes. Switching to 95% made DVaR more stable and consequently improved management, transparency and control of the market risk profile.

The historical simulation calculation can be split into three parts:

- Calculate hypothetical daily profit or loss for each position over the most recent two years, using observed daily market moves.

- Sum hypothetical profit or losses for day one, giving one total profit or loss. This is repeated for all other days in the two year history.

- DVaR is the 95th percentile selected from the two years of daily hypothetical total profit or loss.

The DVaR model has been approved by the FSA to calculate regulatory capital for the trading book. The approval covers general market risk in interest rate, foreign exchange, commodities and equity products, and issuer specific risk for the majority of single name and portfolio traded credit products. Internally, as noted before, DVaR is calculated for both the trading and banking books.

When reviewing DVaR estimates, a number of considerations should be taken into account. These are:

- Historical simulation uses the recent past to generate possible future market moves but the past may not be a good indicator of the future
- The one day time horizon does not fully capture the market risk of positions that cannot be closed out or hedged within one day
- Intra-day risk is not captured
- DVaR does not indicate the potential loss beyond the 95th percentile.

DVaR is an important market risk measurement and control tool and consequently the model is regularly assessed. The main approach employed is the technique known as **back-testing** which counts the

The daily average, maximum and minimum values of DVaR, 95% and 98%, were calculated as below.

Equity risk	12.8	28.9	6.7	11.2	17.6	7.3
Foreign exchange risk	8.1	21.0	2.9	4.9	9.6	2.9
Diversification effect ^a	(67.3)	n/a	n/a	(39.2)	n/a	n/a
Total DVaR	76.5	158.8	47.5	42.0	59.3	33.1

Note

^a The high (and low) DVaR figures reported for each category did not necessarily occur on the same day as the high (and low) DVaR reported as a whole. Consequently a diversification effect number for the high (and low) DVaR figures would not be meaningful and it is therefore omitted from the above table.

number of days when a loss (as defined by the FSA in BIPRU 7.10) exceeds the corresponding DVaR estimate, measured at the 99% confidence level.

The FSA categorises a DVaR model as green, amber or red. A green model is consistent with a good working DVaR model and is achieved for models that have four or less back-testing exceptions in a 12-month period. For Barclays Capital's trading book, green model status was maintained for 2008 and 2007.

To further improve the control framework, formal daily monitoring of **Expected Shortfall** (ES) was started. This metric is the average of all the hypothetical losses beyond DVaR.

Stress testing provides an indication of the potential size of losses that could arise in extreme conditions. It helps to identify risk concentrations across business lines and assist senior management in capital planning decisions. A variety of different types of stress tests are performed in order to fulfil the objectives of stress testing. The global asset class stress tests have been designed to cover major asset classes including interest rate, credit spread, commodity, equity, foreign exchange rates and emerging markets.

Stress results are produced at least fortnightly. If a potential stress loss exceeds the corresponding trigger limit, the positions captured by the stress test are reviewed and discussed by Barclays Capital market risk management and the respective Barclays Capital business heads. The minutes of the discussion, including the merits of the position and the appropriate course of action, are then sent to the Market Risk Director for review.

Scenario tests are hypothetical events which could lead to extreme yet plausible stress type moves under which profitability is seriously challenged. The scenarios are devised by senior risk managers and economists and are reviewed quarterly. Examples include 'Global pandemic', 'Problems with GBP sovereign issuances' and 'Liquidity crisis'. The scenarios are calculated at least fortnightly and the results are included in the Traded Positions Risk Review meeting information pack.

Analysis of traded market risk exposures

The tables and graph show the time series for total DVaR with commentary. Further analysis is given in Note 48.

Analysis of trading revenue

The histograms below show the distribution of daily trading revenue for Barclays Capital in 2008 and 2007. Revenue includes net trading income, net interest income, net fees and commissions relating to primary trading, and the effects of gains or losses on own credit. The average daily revenue in 2008 was £19.5m (2007: £26.2m) and there were 203 positive revenue days out of 254 (2007: 224 out of 253). The number of negative revenue days increased in 2008, largely a result of volatile markets especially in the fourth quarter. The number of positive revenue days greater than £45m also increased but these were spread across the year.

Notes

- a Total DVaR remains broadly at the same level as recorded in Dec 07.
- b Total DVaR reduces due to reduction in interest rate positions.
- c Barclays acquires Lehman Brothers North American businesses during a period of extreme market volatility. The Lehman positions are subsequently reduced.
- d DVaR increases significantly due to extreme market volatility following the failure of several financial intuitions and a material deterioration in the global economic outlook. Barclays changes to 95% DVaR to improve management, transparency and control of the market risk profile.

Barclays objective is to minimise non-traded market risks. This is achieved by transferring risk from the business to a local treasury or Group Treasury, which in turn hedges the net exposure with the external market. Limits exist to ensure no material risk is retained within any business or product area. The majority of exposures are within Global Retail and Commercial Banking.

Non-traded interest rate risk

Non-traded interest rate risk arises from the provision of retail and wholesale (non-traded) banking products and services.

The techniques used to measure and control non-traded interest rate risk include Annual Earnings at Risk, DVaR and Stress Testing. Book limits such as foreign exchange and interest position limits are also in place.

Annual Earnings at Risk (AEaR) measures the sensitivity of net interest income (NII) over the next 12 months. It is calculated on a monthly basis as the difference between the estimated income using the current yield curve and the lowest estimated income following a 100 basis points increase or decrease in interest rates.

To complement AEaR, the Group also uses a simplified version of the DVaR approach used by Barclays Capital.

Stress testing is also carried out by the business centres and is reviewed by senior management and business-level asset and liability committees. The stress testing is tailored to the business and typically incorporates scenario analysis and historical stress movements applied to respective portfolios.

The analysis of non-traded interest rate risk is given in Note 48.

Other market risks

Barclays maintains a number of defined benefit pension schemes for past and current employees. The ability of the Pension Fund to meet the projected pension payments is maintained through investments and regular Bank contributions. **Pension risk** arises because: the estimated market value of the pension fund assets might decline; or their investment returns might reduce; or the estimated value of the pension liabilities might increase. In these circumstances, Barclays could be required or might choose to make extra contributions to the pension fund. Financial details of the pension fund are in Note 30.

Investment risk is the risk of financial volatility arising from changes in the market value of investments, principally occurring in Barclays insurance companies and Barclays Global Investors. A change in the fair value of these investments may give rise to a liability which may have to be funded by the Group. It is Barclays policy to hedge such exposures in line with a defined risk appetite.

Barclays policy is for foreign exchange traded risk to be concentrated and managed in Barclays Capital. Some transactional **foreign exchange risk** exposure arises within the local treasury operations in Global Retail and Commercial Banking to support and facilitate client activity. This is minimised in accordance with modest risk limits and was not material as at 31st December 2008. Other non-Barclays Capital foreign exchange exposure is covered in Note 48.

Asset management structural market risk arises where the fee and commission income earned by asset management products and businesses is affected by a change in market levels, primarily through the link between income and the value of assets under management. It is Barclays policy that businesses monitor and report this risk against a defined risk appetite and regularly assess potential hedging strategies.

Disclosures about certain trading activities including non-exchange traded commodity contracts

The Group provides a fully integrated service to clients for base metals, precious metals, oil, power, natural gas, coal, freight, emission credits, structured products and other related commodities. This service offering continues to expand, as market conditions allow, through the addition of new products and markets.

The Group offers both over the counter (OTC) and exchange traded derivatives, including swaps, options, forwards and futures and enters into physically settled contracts in base metals, power and gas, oil and related products. Physical commodity positions are held at fair value and reported under the Trading Portfolio in Note 12 on page 215.

Fair value measurement

The fair values of physical and derivative positions are primarily determined through a combination of recognised market observable prices, exchange prices, and established inter-commodity relationships. Further information on fair value measurement of financial instruments can be found in Note 50 on page 287.

Movement in fair value of commodity derivative positions		
	2008 £m	2007 £m
Fair value of contracts outstanding at the beginning of the period	812	1,561
Contracts realised or otherwise settled during the period	241	(764)
Fair value of new contracts entered into during the period	(1,245)	243
Other changes in fair values	(744)	(228)
Fair value of contracts outstanding at the end of the period	(936)	812

Credit risk

Credit risk exposures are actively managed by the Group. Refer to Note 47 on page 264 for more information on the Group's approach to credit risk management and the credit quality of derivative assets.

Fair value of the commodity derivative contracts

The tables below analyse the overall fair value of the OTC commodity derivative contracts by movement over time and maturity. As at 31st December 2008 the fair value of the commodity derivative contracts reflects a gross positive fair value of £44,881m (2007: £23,571m) and a gross negative value of £45,817m (2007: £22,759m).

Maturity analysis of commodity derivative fair value		
	2008 £m	2007 £m
Not more than one year	(2,022)	(279)
Over one year but not more than five years	999	773
Over five years	87	318
Total	(936)	812

Liquidity risk management

Organisation and structure

Liquidity risk is the risk that the Group is unable to meet its obligations when they fall due as a result of customer deposits being withdrawn, cash requirements from contractual commitments, or other cash outflows, such as debt maturities. Such outflows would deplete available cash resources for client lending, trading activities and investments. In extreme circumstances lack of liquidity could result in reductions in balance sheet and sales of assets, or potentially an inability to fulfil lending commitments. The risk that it will be unable to do so is inherent in all banking operations and can be affected by a range of institution-specific and market-wide events including, but not limited to, credit events, merger and acquisition activity, systemic shocks and natural disasters.

Barclays Treasury operates a centralised governance and control process that covers all of the Group's liquidity risk management activities. Businesses assist Barclays Treasury in policy formation and limit setting by providing relevant and expert input for their local markets and customers.

Execution of the Group's liquidity risk management strategy is carried out at country level within agreed policies, controls and limits, with the Country Treasurer providing reports directly to Barclays Treasury to evidence conformance with the agreed risk profile. Liquidity risk is a standing agenda item at Country and Cluster Asset and Liability Committees and on a consolidated basis is reported to the Group's Treasury Committee.

The objective of the Group's liquidity risk management strategy is to ensure that the funding profile of individual businesses and the Group as a whole is appropriate to underlying market conditions and the profile of our business in each given country. Liquidity risk limits and controls are flexed to achieve that profile and are based on regular qualitative and quantitative assessments of conditions and abilities under both normal and stressed conditions. Businesses are only allowed to have funding exposure to wholesale markets where they can demonstrate that their market is sufficiently deep and liquid and then only relative to the size and complexity of their business.

Liquidity limits reflect both local regulatory requirements as well as the behavioural characteristics of their balance sheets. Breaches of limits are reported to Treasury Committee together with details of the requirements to return to compliance.

Liquidity management within the Group has several components.

Intraday liquidity

The need to monitor, manage and control intraday liquidity in real time is recognised by the Group as a critical process: any failure to meet specific intraday commitments would have significant consequences, such as a visible market disruption.

The Group policy is that each operation must ensure that it has access to sufficient intraday liquidity to meet any obligations it may have to clearing and settlement systems. Major currency payment flows and payment system collateral are monitored and managed in real time to ensure that at all times there is sufficient collateral to make payments. In practice, the Group maintains a significant buffer of surplus intraday liquidity to ensure that payments are made on a timely basis. The Group actively engages in payment system development to help ensure that new payment systems are robust.

Day to day funding

Day to day funding is managed through limits on wholesale borrowings, secured borrowings and funding mismatches. These ensure that on any day and over any period there is a limited amount of refinancing required. These requirements include replenishment of funds as they mature or are borrowed by customers. The Retail and Commercial Bank together with Wealth maintain no reliance on wholesale funding. The Group maintains an active presence in global money markets through Barclays Capital and monitors and manages the wholesale money market capacity for the Group's name to enable that to happen.

In addition to cash flow management, Treasury also monitors term mismatches between assets and liabilities, as well as the level and type of undrawn lending commitments, the usage of overdraft facilities and the impact of contingent liabilities such as standby letters of credit and guarantees.

Liquid assets

The Group maintains a portfolio of highly marketable assets including UK, US and Euro-area government bonds that can be sold or funded on a secured basis as protection against any unforeseen interruption to cash flow. The Group accesses secured funding markets in these assets on a regular basis. The Group does not rely on committed funding lines for protection against unforeseen interruptions to cash flow.

Diversification of liquidity sources

Sources of liquidity are regularly reviewed to maintain a wide diversification by currency, geography, provider, product and term. In addition, to avoid reliance on a particular group of customers or market sectors, the distribution of sources and the maturity profile of deposits are also carefully managed. Important factors in assuring liquidity are strength of relationships and the maintenance of depositors' confidence. Such confidence is based on a number of factors including the Group's reputation and relationship with those clients, the strength of earnings and the Group's financial position.

Structural liquidity

An important source of structural liquidity is provided by our core retail deposits in the UK, Europe and Africa, mainly current accounts and savings accounts. Although current accounts are repayable on demand and savings accounts at short notice, the Group's broad base of customers – numerically and by depositor type – helps to protect against unexpected fluctuations. Such accounts form a stable funding base for the Group's operations and liquidity needs.

The Group policy is to fund the balance sheet of the Retail and Commercial Bank together with Wealth and Head office functions on a global basis with customer deposits and capital without recourse to the wholesale markets. This provides protection from the liquidity risk of wholesale market funding. The exception to this policy is Absa, which has a large portion of wholesale funding due to the structural nature of the South African financial sector.

Scenario analysis and stress testing

Stress testing is undertaken to assess and plan for the impact of various scenarios which may put the Group's liquidity at risk.

Treasury develops and monitors a range of stress tests on the Group's projected cash flows. These stress scenarios include Barclays-specific scenarios such as an unexpected rating downgrade and operational problems, and external scenarios such as Emerging Market crises, payment system disruption and macro-economic shocks. The output informs both the liquidity mismatch limits and the Group's contingency funding plan. This is maintained by Treasury and is aligned with the Group and country business resumption plans to encompass decision-making authorities, internal and external communication and, in the event of a systems failure, the restoration of liquidity management and payment systems.

Wholesale depositor split by counterparty type

Wholesale depositor split by geography

Liquidity risk management

Key elements

The ability to raise funds is in part dependent on maintaining the Bank's credit rating. The funding impact of a credit downgrade is closely tracked. Whilst the impact of a single downgrade may affect the price at which funding is available, the effect on liquidity is not considered material in Group terms.

For further details see contractual obligations and commercial commitments of the Group on page 33.

Year end assessment of liquidity

Barclays maintained a strong liquidity profile in 2008, sufficient to absorb the impact of a stressed funding environment. The Group has access to a substantial pool of liquidity both in secured markets and from unsecured depositors including numerous foreign governments and central banks. In addition, our limited reliance on securitisations as a source of funding has meant that the uncertainty in securitisation markets has not impacted our liquidity risk profile.

Whilst funding markets were extremely difficult in the latter half of 2008, and particularly since September 2008, Barclays was able to increase available liquidity, extend the term of unsecured liabilities, and reduce reliance on unsecured funding. Barclays has participated in various government and central bank liquidity facilities, both to aid central banks implementation of monetary policy and support central bank initiatives, where participation has enabled the lengthening of the term of our refinancing. These facilities have improved access to term funding, and helped moderate money market rates.

For the Group, loans and advances to customers and banks are more than covered by the combination of customer deposits and longer term debt at 112% at 31st December 2008 (2007: 125%).

Global Retail and Commercial Banking

The sum of liabilities in Global Retail and Commercial Banking, Barclays Wealth and Head office functions exceeds assets in those businesses. As a result they have no reliance on wholesale funding. The balance sheet is modelled to reflect behavioural experience in both assets and liabilities, and is managed to maintain a positive cash profile (table 1).

Throughout 2008 Global Retail and Commercial Banking continued to grow the amount of deposits despite competitive pressures (table 2).

Barclays Capital

Barclays Capital manages liquidity to be self-funding through wholesale sources, managing access to liquidity to ensure that potential cash outflows in a stressed environment are covered.

Funding reliability is maintained by accessing a wide variety of investors and geographies and by building and maintaining strong relationships with these providers of liquidity.

Unsecured funding

Additionally, unsecured funding is managed within specific term limits. The term of unsecured liabilities has been extended, with average life improving by four months from eight months at the end of December 2007 to 12 months at the end of December 2008.

Our capital markets debt issuance includes issues of senior and subordinated debt in US registered offerings and medium term note programmes and European medium term note programs. Substantially all of our unsecured senior issuance is without covenants that trigger increased cost or accelerate maturity. Furthermore, between September and December 2008 we issued £1.1bn in government guaranteed debt, £9bn in maturities of one to three years and £2bn in under one-year maturities.

Secured funding

Barclays funds securities based on liquidity characteristics. Limits are in place for each security asset class reflecting liquidity in the cash and financing markets for these assets. Approximately 80% of assets funded in repurchase and stock loan transactions are fundable within central bank facilities (excluding Bank of England Emergency facilities and the Federal Reserve Primary Dealer Credit Facility).

Liquidity risk to secured funding is also mitigated by:

- selecting reliable counterparties
- maintaining term financing and by limiting the amount of overnight funding
- limiting overall secured funding usage

Readily available liquidity

Substantial resources are maintained to offset maturing deposits and debt. These readily available assets are sufficient to absorb stress level losses of liquidity from unsecured as well as contingent cash outflows, such as collateral requirements on ratings downgrades. The sources of liquidity and contingent liquidity are from a wide variety of sources, including deposits held with central banks and unencumbered securities.

In addition, the Group maintains significant pools of securitisable assets.

Secured Financing by Asset Class (% of Total Secured Funding)^a

Note

^a MBS includes only agency mortgages. ABS includes private label issuance of residential mortgage backed securities.

Barclays operates a centralised capital management model, considering both regulatory and economic capital.

The Group's capital management objectives are to:

- Maintain sufficient capital resources to meet the minimum regulatory capital requirements set by the FSA and the US Federal Reserve Bank's requirements that a financial holding company be well capitalised.
- Maintain sufficient capital resources to support the Group's risk appetite and economic capital requirements.
- Support the Group's credit rating.
- Ensure locally regulated subsidiaries can meet their minimum capital requirements.
- Allocate capital to businesses to support the Group's strategic objectives, including optimising returns on economic and regulatory capital.

Treasury Committee manages compliance with the Group's capital management objectives. The Committee reviews actual and forecast capital demand and resources on a monthly basis. The processes in place for delivering the Group's capital management objectives are:

- Establishment of internal targets for capital demand and ratios
- Managing capital ratio sensitivity to foreign exchange rate movements
- Ensuring local entity regulatory capital adequacy
- Allocating capital to the Group's strategic medium-term plan
- Economic capital management

In addition to the processes above, the Risk Oversight Committee and the Board Risk Committee annually review and set risk appetite (see page 78) and analyse the impacts of stress scenarios (see page 79) in order to understand and manage the Group's projected capital adequacy.

Internal targets

To support its capital management objectives, the Group sets internal targets for its key capital ratios. Internal targets are reviewed regularly by Treasury Committee to take account of:

- Changes in forecast demand for capital caused by accessing new business opportunities, including mergers and acquisitions
- Flexibility in debt capital issuance and securitisation plans
- The possible impact of stress scenarios including:
 - Changes in forecast demand for capital from unanticipated drawdown of committed facilities or as a result of deterioration in the credit quality of the Group's assets
 - Changes in forecast profits and other capital resources
 - Changes to capital resources and forecast demand due to foreign exchange rate movements.

Managing capital ratio sensitivity to foreign exchange rate movements

The Group has capital resources (capturing investments in subsidiaries and branches, intangible assets, minority interests and debt capital) and risk weighted assets denominated in non-Sterling currencies. Changes in foreign exchange rates result in changes in the Sterling equivalent value of non-Sterling denominated capital resources and risk weighted assets. As a result, the Group's regulatory capital ratios are sensitive to foreign exchange rate movements.

The Group's hedge strategy is to minimise the volatility of all capital ratios whilst taking into account the impact on hedging of non-Sterling net investments, the cost of hedging, the availability of a suitable foreign exchange market and prevailing foreign exchange rates.

To minimise volatility in the equity ratio, the Group aims over time to maintain the ratio of foreign currency equity capital resources to RWAs the same as the Group's equity ratio. To create equity capital resources denominated in non-Sterling currencies, the Group leaves some investments in core non-Sterling subsidiaries and branches unhedged. The resultant change in the Sterling value of the investments is captured in the currency translation reserve, resulting in an equity capital movement.

Depending on the value of non-Sterling net investments, it may not always be possible to maintain the ratio, leaving some capital ratio sensitivity to foreign exchange movements.

The proceeds from equity accounted foreign currency preference shares are also used in the equity ratio hedge. If a preference share is redeemed, the cumulative movement in the currency translation reserve will be offset by an equal and opposite movement in other reserves reflecting the revaluation of the preference shares to prevailing foreign exchange rates.

The exposure of the Tier 1 and total capital ratios to foreign exchange rate movements is managed by issuing, where possible, debt capital in non-Sterling currencies such that the ratio of Tier 1 and total capital resources to risk weighted assets is the same as the Group's Tier 1 and total capital ratios. This is primarily achieved by the issuance of debt capital from Barclays Bank PLC in major currencies, but can also be achieved by subsidiaries issuing capital in local currencies.

Local entity regulatory capital adequacy

The Group manages its capital resources to ensure that those Group entities that are subject to local capital adequacy regulation in individual jurisdictions meet their minimum capital requirements. Local management manages compliance with entities minimum regulatory

capital requirements by reporting to local Asset and Liability Committees with oversight by Treasury Committee, as required.

Injections of capital resources into Group entities are centrally controlled by Treasury Committee, under authorities delegated from the Group Executive Committee. The Group's policy is for surplus capital held in Group entities to be repatriated to Barclays Bank PLC in the form of dividends and/or capital repatriation, subject to local regulatory requirements, exchange controls and tax implications.

Other than as indicated above, the Group is not aware of any material impediments to the prompt transfer of capital resources or repayment of intra-group liabilities when due.

Allocating capital in the Group's strategic medium-term plan

Capital adequacy and returns on regulatory and economic capital form a key part of the Group's annual strategic medium-term planning process. Amongst other strategic objectives, the Group seeks to optimise returns on economic and regulatory capital through the planning process. To achieve this, executive management consider returns on risk weighted assets and economic capital when setting limits for business capital demand. Executive management will also review the forecast capital ratios to ensure internal targets continue to be met over the medium-term plan.

Treasury Committee reviews the limits on capital demand on a monthly basis taking into account actual performance.

Economic capital management

Economic capital is an internal measure of the minimum equity and preference capital required for the Group to maintain its credit rating based upon its risk profile.

Barclays assesses economic capital requirements by measuring the Group risk profile using both internally and externally developed models. The Group assigns economic capital primarily within the following risks: Credit Risk, Market Risk, Operational Risk, Fixed Assets, Private Equity and Pension Risk. Group Risk owns the methodology and policy for economic capital while the businesses are primarily responsible for the calculation.

The Group regularly enhances its economic capital methodology and benchmarks outputs to external reference points. The framework reflects default probabilities during average credit conditions, rather than those prevailing at the balance sheet date, thus removing some of the cyclical nature from the economic capital calculation. Economic capital for wholesale credit risk includes counterparty credit risk arising as a result of credit risk on traded market exposures. The framework also adjusts economic capital to reflect time horizon, correlation of risks and risk concentrations.

Economic capital is allocated on a consistent basis across all of Barclays businesses and risk activities. A single cost of equity is applied to calculate the cost of risk. Economic capital allocations reflect varying levels of risk.

The total average economic capital required by the Group, as determined by risk assessment models and after considering the Group's estimated portfolio effects, is compared with the average supply of capital resources to evaluate economic capital utilisation.

The Group's economic capital calculations form the basis of its Internal Capital Adequacy Assessment Process ('ICAAP') submission to the FSA under Pillar 2 of Basel II.

Capital Allocation

In 2008, UK Retail Banking economic capital allocation increased £550m to £3,950m (2007: £3,400m), reflecting mortgage asset growth and movements in benchmark house price indices.

Capital risk management

Barclays Commercial Bank economic capital allocation increased £300m to £3,500m (2007: £3,200m), primarily as a consequence of asset growth with some mitigation from portfolio management activity.

Barclaycard economic capital allocation increased £650m to £2,700m (2007: £2,050m), driven by acquisitions, the redemption of securitisation deals and exposure growth, predominantly in the US.

GRCB – Western Europe economic capital allocation increased £650m to £1,900m (2007: £1,250m), primarily reflecting the weakening of Sterling and underlying lending growth.

GRCB – Emerging Markets economic capital allocation increased £650m to £1,100m (2007: £450m), reflecting broad-based retail and wholesale asset growth across the business, especially in India, UAE and the new markets of Russia and Pakistan.

GRCB – Absa economic capital allocation increased £200m to £1,100m (2007: £900m), reflecting balance sheet growth.

Barclays Capital economic capital allocation increased £3,050m to £8,250m (2007: £5,200m). This was driven by growth in the investment portfolio, deterioration in credit quality, exposure to drawn leveraged finance underwriting positions and an increase in market volatility.

Barclays Global Investors economic capital allocation increased £200m to £400m (2007: £200m). This was primarily driven by an increase in the support for selected cash funds and some increase in proprietary investments.

Barclays Wealth economic capital allocation in 2008 remained unchanged at £500m, despite strong growth on the balance sheet. This was due to the impact of greater geographical diversification and increased levels of collateralisation.

The average supply of capital to support the economic capital framework^a

	2008 £m	2007 £m
Shareholders' equity excluding minority interests less goodwill ^b	17,650	14,150
Retirement benefits liability	1,050	1,150
Cash flow hedging reserve	100	250
Available for sale reserve	400	(150)
Gains on own credit	(1,250)	(100)
Preference shares	5,500	3,700
Available funds for economic capital excluding goodwill	23,450	19,000
Average historic goodwill and intangible assets ^b	9,450	8,400
Available funds for economic capital including goodwill^c	32,900	27,400

Average economic capital allocation by business £m^d

Average economic capital allocation by risk type £m

Notes

^a Averages for the period will not correspond to period-end balances disclosed in the balance sheet. Numbers are rounded to the nearest £50m for presentational purposes only.

^b Average goodwill relates to purchased goodwill and intangible assets from business acquisitions.

^c Available funds for economic capital as at 31st December 2008 stood at £40,150m (2007: £29,200m).

^d Average EC charts exclude the EC calculated for pension risk (average pension risk for 2008 is £650m compared with £500m in 2007).

^e Includes Transition Businesses and capital for central function risks.

^f Includes credit risk loans.

^g Includes investments in associates, private equity risk, insurance risk and residual value.

Operational risk management

Operational risk is the risk of direct or indirect losses resulting from human factors, external events, and inadequate or failed internal processes and systems. Operational risks are inherent in the Group's operations and are typical of any large enterprise. Major sources of operational risk include: operational process reliability, IT security, outsourcing of operations, dependence on key suppliers, implementation of strategic change, integration of acquisitions, fraud, human error, customer service quality, regulatory compliance, recruitment, training and retention of staff, and social and environmental impacts. Barclays is committed to the advanced measurement and management of operational risks. In particular, it has implemented improved management and measurement approaches for operational risk to strengthen control, improve customer service and minimise operating losses. Barclays was granted a Waiver to operate an Advanced Measurement Approach (AMA) under Basel II, which commenced in January 2008.

The Group's operational risk management framework aims to:

- Understand and report the operational risks being taken by the Group.
- Capture and report operational errors made.
- Understand and minimise the frequency and impact, on a cost benefit basis, of operational risk events.

Barclays works closely with peer banks to benchmark our internal operational risk practices and to drive the development of advanced operational risk techniques across the industry. It is not cost effective to attempt to eliminate all operational risks and in any event it would not be possible to do so. Events of small significance are expected to occur and are accepted as inevitable; events of material significance are rare and the Group seeks to reduce the risk from these in a framework consistent with its agreed Risk Appetite.

Barclays has a Group Operational Risk Framework, which is consistent with and part of the Group Internal Control and Assurance Framework. Minimum control requirements have been established for all key areas of identified risk by 'Principal Risk' owners (see page 78). The risk categories relevant to operational risks are Financial Crime, Financial Reporting, Taxation, Legal, Operations, People, Regulatory and Technology. In addition the following risk categories are used for business risk: Brand Management, Corporate Responsibility, Strategic and Change. Responsibility for implementing and overseeing these policies is positioned with Group Principal Risk Owners. The prime responsibility for the management of operational risk and the compliance with control requirements rests with the business and functional units where the risk arises. Front line risk managers are widely distributed throughout the Group in business units. They service and support these areas, assisting line managers in managing these risks.

Business Risk Directors in each business are responsible for overseeing the implementation of and compliance with Group policies. Governance and Control Committees in each business monitor control effectiveness. The Group Governance and Control Committee receives reports from the committees in the businesses and considers Group-significant control issues and their remediation. In the Group Centre, each Principal Risk is owned by a senior individual who liaises with Principal Risk owners within the businesses. In addition, the Operational Risk Director oversees the range of operational risks across the Group in accordance with the Group Operational Risk Framework. Business units are required to report on both a regular and an event-driven basis. The reports include a profile of the material risks to their business objectives, control issues of Group-level significance, and operational risk events. Specific reports are prepared on a regular basis for the Risk Oversight Committee, the Board Risk Committee and the Board Audit Committee. The Internal Audit function provides further assurance for operational risk control across the organisation and reports to the Board and senior management.

Barclays applies a consistent approach to the identification and assessment of key risks and controls across all business units. Managers in the businesses use self-assessment techniques to identify risks, evaluate control effectiveness and monitor performance. Business management determines whether particular risks are effectively managed within business Risk Appetite and otherwise takes remedial action. The risk assessment process is consistent with the principles in the integrated framework published by the Committee of Sponsoring Organisations of the Treadway Commission (COSO).

A standard process is used Group-wide for the recognition, capture, assessment, analysis and reporting of risk events. This process is used to help identify where process and control requirements are needed to reduce the recurrence of risk events. Risk events are loaded onto a central database and reported monthly to the Group Operational Risk Executive Committee.

Barclays also uses a database of external public risk events and is a member of the Operational Risk Data Exchange (ORX), an association of international banks that share anonymised loss data information to assist in risk identification, assessment and modelling.

By combining internal data, including internal loss experience, risk and control assessments, key indicators and audit findings, with external loss data and expert management judgement, Barclays is able to generate Key Risk Scenarios (KRSs), which identify the most significant operational risks across the Group. The KRSs are validated at business unit and at Group level to ensure that they appropriately reflect the level of operational risk. These are the main input to our capital model. Operational risk capital is allocated, on a risk sensitive basis, to business units in the form of economic capital charges, providing an incentive to manage these risks within appetite levels.

Operational risk management

Operational risk events

A high proportion of Barclays operational risk events have a low financial cost associated with them and a very small proportion of operational risk events have a material impact. In 2008, 73% of reported operational loss events had a value of £50,000 or less (2007: 79%) but accounted for 8% of the overall impact (2007: 15%). In contrast, 2% of the operational risk events had a value of £1m or greater (2007: 2%) but accounted for 66% of the overall impact (2007: 50%).

Analysis of Barclays operational risk events in 2008 by Basel II category, as shown in figure 1, highlights that the highest frequency of events occurred in External Fraud (46%) and Execution, Delivery and Process Management (42%). These two areas also accounted for the majority of losses by value (figure 2), with Execution, Delivery and Process Management accounting for 81% of total operational risk losses and External Fraud accounting for 10%. Compared with 2007 we have seen a reduction in External Fraud and an increase in Execution, Delivery and Process Management events, driven mainly by market volatility.

Barclays has been granted a waiver by the FSA to apply an Advanced Measurement Approach (AMA) for Group-wide consolidated and solus regulatory capital reporting. Barclays has applied the AMA Group-wide. Areas where roll-out of AMA is still continuing and where the Standardised approach is currently applied are Barclays Bank Mozambique, National Bank of Commerce (Tanzania) and the US Airways card portfolio purchased from Bank of America. Areas where roll-out of AMA is ongoing and where the Basic Indicator approach is applied are Banco Comercial Angolano, Woolworths Financial Services in South Africa, Barclays Bank PLC Pakistan, Barclays Investment and Loans India Limited, Barclays Bank LLC Russia and the Cash Equity, Municipal Bonds and M&A business acquired from Lehman Brothers. In certain joint ventures and associates, Barclays may not be able to apply the Advanced Operational Risk Framework.

Barclays does not currently offset the expected loss or mitigating effect of insurances against its regulatory capital requirement. However, Barclays has applied to the FSA to offset expected loss.

Fig. 2: Operational risk events by category – % of total by value

Financial crime risk is a category of operational risk. It arises from the risk that the Group might fail to comply with financial crime legislation and industry laws on anti-money laundering or might suffer losses as a result of internal or external fraud, or might fail to ensure the security of personnel, physical premises and the Group's assets.

Barclays adopts an integrated approach to financial crime risk management. In line with the five-step risk management model, Group Financial Crime Management (GFCM) has the responsibility to direct, assess, control, report and manage/challenge financial crime risks, which are structured into three strands: anti-money laundering (AML) and sanctions; fraud; and security.

Each business unit within Barclays develops its own capability to tackle financial crime, providing regular reporting on performance, incidents and the latest trends impacting business. This integrated model allows us to:

- Develop a clear profile of financial crime risk across the Group
- Share intelligence, adopt common standards and respond promptly to emerging issues
- Drive forward law enforcement and other government initiatives
- Benchmark ourselves against other financial institutions facing similar challenges

Anti-money laundering and sanctions risk

The Group assesses the implications of all emerging legal and regulatory requirements that impact it and establishes and operates an AML Risk control framework and associated policies and minimum standards in respect of AML, terrorist financing, sanctions and bribery and corruption.

The Group operates an AML oversight programme to ensure a system of effective controls comply with the overarching policies, providing technical guidance and support to each business unit. This is monitored via conformance testing both at the business units and the Group level. In 2008, Barclays Internal Audit completed a combined global audit of Know Your Customer, AML and Sanctions procedures.

GFCM collates and oversees the preparation of Group-wide management information on AML and sanctions. This information includes risk indicators, such as volumes of suspicious activity reports (SARs) and is supplemented by trend analysis, which highlights high-risk or emerging issues so that prompt action can be taken to address them.

Three committees (the AML Steering Committee, the Sanctions Cross-Cluster Operational Review Board and the Policy Review Forum), review business performance, share intelligence, develop and agree controls, and discuss emerging themes and the implementation status of policies and procedures.

All businesses contribute towards the Group Money Laundering Reporting Officers Annual Report, which is provided to Group senior executive management and is available to the FSA. Together with regular management information and conformance testing, this report updates senior management with evidence that the Group's money laundering and terrorist financing risks are being appropriately, proportionally and effectively managed.

During 2008, the Group augmented its sanctions capability by issuing a revised Sanctions Policy. This enhances certain areas of control such as screening.

Barclays continues to upgrade its sanctions screening capabilities, in line with best international practice and changing regulatory requirements and has invested substantial resources to further enhance its monitoring capabilities in this area and will continue to do so.

Representatives of the Group attend industry fora such as the Wolfsberg Group, the British Bankers Association's Money Laundering Policy Group (MLPG) and the Money Laundering Advisory Panel (MLAP), to ensure that Barclays is influential in discussing and interpreting new legislation.

In 2008, the Group continued to follow developments in the Single European Payments Area (SEPA), with a view to developing its payments systems accordingly.

Financial crime risk management

Fraud risk and security risk

Fraud risk

The Group establishes and operates a fraud risk framework which measures overall fraud risk exposure and controls. Together with the Group-wide policies and reporting, this structure directs how fraud is managed.

GFCM is responsible for delivering the overall Group Fraud Strategy by providing oversight to Group and business units in the management of fraud risk.

The Group Fraud Strategy is designed to:

- Contain existing risks through effective measurement, monitoring and robust anti-fraud systems, in line with the expansion of the bank
- Identify emerging threats in order that effective fraud controls are embedded across the Group along with increased capability to manage risk
- Identify and manage fraud incidents, ensuring regulatory and legal conformance, appropriate escalation and resolution of control issues to prevent further loss
- Share fraud trends, intelligence and knowledge across the Group and between government bodies, law enforcement agencies, financial institutions and other key stakeholders

GFCM assesses fraud risk across existing and emerging products, channels, and jurisdictions. It has embedded a robust fraud reporting framework which tracks current exposure to identify risk and ensure adequate risk management capability and controls.

The Group's business units identify their appetite for fraud loss which informs and determines the overall fraud plan. Objectives are set around these plans and performance is monitored through reporting and oversight via appropriate Governance Committees at both business unit and Group level.

Barclays undertakes regular benchmarking performance reviews with relevant peer groups and maintains a conduit to ensure a two-way exchange of information and intelligence at government, trade and industry levels.

The Barclays Group Fraud Risk profile is tracked regularly through the review and challenge of the net losses and key risk metrics; these are then viewed against the overall Fraud Risk Profile (at the Fraud Risk Oversight Committee).

Aggregated fraud data is reported monthly to senior management. The performance of the business in combating fraud losses is measured against plan in line with the Principal Risk Policy. Key Risk Indicators are embedded in order that overall exposure can be established. As a result of this process, fraud can be measured and appropriate action taken to minimise or track significant issues.

Barclays overall reported fraud losses increased in 2008 in line with industry trends. Whilst industry and proprietary initiatives (online and Chip/PIN) have continued to pay dividends and reduce exposure in some areas, fraud increased in other areas and in geographies that do not have Chip and PIN technology.

In 2008, the Group implemented a new global fraud application system aimed at preventing first-party fraud.

Compromised customer details continue to be a significant threat globally. GFCM continues to work closely with industry and other associated bodies to:

- Protect any customer whose details may be compromised
- Develop a standard approach for dealing with accounts that may be impacted by any data compromise or security breach
- Reassure customers and provide points of contact for help and guidance.

Security risk

GFCM manages security risk. Its fundamental objective is to allow Barclays to operate in a safe and secure manner in all existing and potential future markets.

In pursuit of this objective, the security risk team gathers and shares current threat assessments across business areas, using intelligence from security and government agencies and in-country teams. It ensures that suitable policies and control systems are in place to protect Group business and high-risk personnel.

Barclays has developed and continues to improve a robust Group-wide people-screening process to protect the Group from those people who want to harm the organisation, by either joining as staff members or becoming involved with its operations.

Security risk is regularly reported by the businesses and reviewed via the Security Risk Management Committee, whose objectives are to:

- Consider the latest management information and security threat assessments
- Drive forward mitigating action to protect the Group from potential threats
- Provide guidance to the design and effectiveness of the overall Barclays Security Risk framework
- Ensure all security risk workstreams have been effectively integrated and implemented
- Monitor corporate security profiles against the agreed plan, tracking issues in order that remedial action can be taken

Statistical and other risk information

This section of the report contains supplementary information that is more detailed or contains longer histories than the data presented in the discussion. For commentary on this information, please refer to the preceding text (pages 80 to 118).

Loans and advances to customers in the UK	216,018	190,347	170,518	163,759	146,248

Loans and advances included in the above table for the years 2004 to 2007 have been reanalysed between wholesale and retail distribution and leisure, Home loans, and Other personal to reflect changes in classification of assets.

The industry classifications in Tables 7-9 have been prepared at the level of the borrowing entity. This means that a loan to the subsidiary of a major corporation is classified by the industry in which the subsidiary operates, even though the parent's predominant business may be in a different industry.

	2008 £m	2007 £m	2006 £m
Interest income that would have been recognised under the original contractual terms			
United Kingdom	244	340	357
Rest of the World	235	91	70
Total	479	431	427

Interest income of approximately £195m (2007: £48m, 2006: £72m) from such loans was included in profit, of which £72m (2007: £26m, 2006: £49m) related to domestic lending and the remainder related to foreign lending.

In addition, a further £159m (2007: £113m, 2006: £98m) was recognised arising from impaired loans. Following impairment, interest income is recognised using the original effective rate of interest which was used to discount the expected future cash flows for the purpose of measuring the impairment loss. £54m (2007: £93m, 2006: £88m) of this related to domestic impaired loans and the remainder related to foreign impaired loans.

Table 30: Total impairment allowance/(provision) coverage of credit risk loans

	2008 %	2007 %	2006 %	2005 %	2004 ^a %
United Kingdom	50.7	56.6	64.2	64.6	68.1
Other European Union	41.8	60.9	65.1	70.1	60.9
United States	31.8	9.5	64.9	52.8	57.0
Africa	39.5	62.1	73.2	74.3	68.4
Rest of the World	49.2	86.5	100.0	68.7	71.9
Total coverage of credit risk loans	41.9	39.1	65.6	66.2	66.9
Total coverage of credit risk loans excluding ABS CDO Super Senior exposure	48.0	55.3	65.6	66.2	66.9

Table 31: Total impairment allowance/(provision) coverage of potential credit risk lending (CRLs and PPLs)

	2008 %	2007 %	2006 %	2005 %	2004 ^a %
United Kingdom	44.0	51.8	57.3	54.6	56.5
Other European Union	29.5	55.1	61.0	65.9	55.6
United States	29.2	7.6	57.1	50.4	52.3
Africa	37.1	43.4	51.5	57.8	43.5
Rest of the World	45.5	86.5	91.0	67.6	65.9
Total coverage of potential credit risk lending	36.2	33.0	57.0	56.2	56.0
Total coverage of potential credit risk lenders excluding ABS CDO Super Senior exposure	39.6	47.7	57.0	56.2	56.0

Allowance coverage of credit risk loans and potential credit risk loans excluding the drawn ABS CDO Super Senior exposure decreased to 48.0% (31st December 2007: 55.3%) and 39.6% (31st December 2007: 47.7%), respectively. The decrease in these ratios reflected a change in the mix of credit risk loans and potential credit risk loans: unsecured retail exposures, where the recovery outlook is relatively low, decreased as a proportion of the total as the collections and underwriting processes were improved. Secured retail and wholesale and corporate exposures, where the recovery outlook is relatively high, increased as a proportion of credit risk loans and potential credit risk loans.

Note

^a Does not reflect the application of IAS 32, IAS 39 and IFRS 4 which became effective from 1st January 2005.

Supervision and regulation

The Group's operations, including its overseas offices, subsidiaries and associates, are subject to a significant body of rules and regulations that are a condition for authorisation to conduct banking and financial services business and constrain business operations. These include reserve and reporting requirements and conduct of business regulations. These requirements are imposed by the relevant central banks and regulatory authorities that supervise the Group in the jurisdictions in which it operates. The requirements reflect global standards developed by, among others, the Basel Committee on Banking Supervision and the International Organisation of Securities Commissions. They also reflect requirements derived from EU directives.

In the UK, the FSA is the independent body responsible for the regulation of deposit taking, life insurance, home mortgages, general insurance and investment business. Barclays Bank PLC is authorised by the FSA to carry on a range of regulated activities within the UK and is subject to consolidated supervision by the FSA. In its role as supervisor, the FSA seeks to ensure the safety and soundness of financial institutions with the aim of strengthening, but not guaranteeing, the protection of customers. The FSA's continuing supervision of financial institutions is conducted through a variety of regulatory tools, including the collection of information from statistical and prudential returns, reports obtained from skilled persons, visits to firms and regular meetings with management to discuss issues such as performance, risk management and strategy.

The FSA adopts a risk-based approach to supervision. The starting point for supervision of all financial institutions is a systematic analysis of the risk profile for each authorised firm. The FSA has adopted a homogeneous risk, processes and resourcing model in its approach to its supervisory responsibilities (known as the ARROW model) and the results of the risk assessment are used by the FSA to develop a risk mitigation programme for a firm. The FSA also promulgates requirements that banks and other financial institutions are required to meet on matters such as capital adequacy, limits on large exposures to individual entities and groups of closely connected entities, liquidity and rules of business conduct.

Banks, insurance companies and other financial institutions in the UK are subject to a single financial services compensation scheme (the Financial Services Compensation Scheme) where an authorised firm is unable or is likely to be unable to meet claims made against it because of its financial circumstances. Most deposits made with branches of Barclays Bank PLC within the European Economic Area (EEA) which are denominated in Sterling or other EEA currencies (including the Euro) are covered by the Scheme. Most claims made in respect of investment business will also be protected claims if the business was carried on from the UK or from a branch of the bank or investment firm in another EEA member state.

Outside the UK, the Group has operations (and main regulators) located in continental Europe, in particular France, Germany, Spain,

Switzerland, Portugal and Italy (local central banks and other regulatory authorities); Asia Pacific (various regulatory authorities including the Hong Kong Monetary Authority, the Financial Services Agency of Japan, the Australian Securities and Investments Commission, the Monetary Authority of Singapore, the China Banking Regulatory Commission and the Reserve Bank of India); Africa and the Middle East (various regulatory authorities including the South African Reserve Bank and the Financial Services Board and the regulatory authorities of the United Arab Emirates) and the United States of America (including the Board of Governors of the Federal Reserve System (FRB), the Office of the Comptroller of the Currency (OCC) and the Securities and Exchange Commission).

In Europe, the UK regulatory agenda is considerably shaped and influenced by the directives emanating from the EU. These form part of the European Single Market programme, an important feature of which is the framework for the regulation of authorised firms. This framework is designed to enable a credit institution or investment firm authorised in one EU member state to conduct banking or investment business through the establishment of branches or by the provision of services on a cross-border basis in other member states without the need for local authorisation. Barclays operations in Europe are authorised and regulated by a combination of both home (the FSA) and host regulators.

Barclays operations in South Africa, including Absa Group Limited, are supervised and regulated by the South African Reserve Bank (SARB) and the Financial Services Board (FSB). SARB oversees the banking industry and follows a risk-based approach to supervision whilst the FSB oversees the non-banking financial services industry and focuses on enhancing consumer protection and regulating market conduct.

In the United States, Barclays PLC, Barclays Bank PLC and Barclays US banking subsidiaries are subject to a comprehensive regulatory structure involving numerous statutes, rules and regulations, including the International Banking Act of 1978, the Bank Holding Company Act of 1956, as amended (BHC Act), the Foreign Bank Supervision Enhancement Act of 1991 and the USA PATRIOT Act of 2001. Such laws impose restrictions on the activities of Barclays, including its US banking subsidiaries and the Bank's US branches, as well as prudential restrictions, such as limits on extensions of credit by the Bank's US branches and the US banking subsidiaries to affiliates. The Bank's New York and Florida branches are subject to extensive federal and state supervision and regulation by the FRB and the New York and Florida banking supervisors. Barclays Global Investors, NA, a federally chartered trust company, is subject to supervision and regulation by the OCC, and Barclays Bank Delaware, a Delaware-chartered commercial bank, is subject to supervision and regulation by the Delaware banking supervisor and the Federal Deposit Insurance Corporation (FDIC). Only the deposits of Barclays Bank Delaware are insured by the FDIC.

Barclays PLC, Barclays Bank PLC and Barclays Group US Inc. are bank

holding companies registered with the FRB. Each has elected to be treated as a financial holding company under the BHC Act. Financial holding companies may engage in a broader range of financial and related activities than are permitted to banking organisations that do not maintain financial holding company status, including underwriting and dealing in all types of securities. To maintain the financial holding company status of each of Barclays PLC, Barclays Bank PLC and Barclays Group US Inc., Barclays Bank PLC is required to meet or exceed certain capital ratios and to be deemed to be 'well managed', and Barclays Bank Delaware and Barclays Global Investors, NA must also meet certain capital requirements, be deemed to be 'well managed' and must have at least a 'satisfactory' rating under the Community Reinvestment Act of 1977.

Barclays investment banking operations are subject to ongoing supervision and regulation by the SEC, the Financial Industry Regulatory Authority (FINRA) and other government agencies and self-regulatory organisations as part of a comprehensive scheme of regulation of all aspects of the securities business under the US federal securities laws.

Barclays subsidiaries in the US are also subject to regulation by applicable federal and state regulators of their activities in the asset management, investment advisory, mutual fund and mortgage lending businesses. The US operations and subsidiaries of Barclays are subject to extensive laws and regulations designed to combat money laundering and terrorist financing and to enforce compliance with US economic sanctions.

Regulatory Developments

In the wake of the financial crisis there will be regulatory change that will have a substantial impact on all financial institutions, including the Group. The full extent of this impact is not yet clear. Programmes to reform the global regulatory framework were agreed first by G8 Finance Ministers in April 2008 and subsequently by G20 Heads of Government in November 2008. In the EU, Finance Ministers agreed a roadmap for regulatory reform in May 2008. There is a substantial degree of commonality to these programmes covering issues of capital and liquidity regulation, risk management and accounting standards. These programmes will be further developed and implemented in 2009.

In the UK, in response to the financial crisis, the Chairman of the FSA has been requested by the Chancellor of the Exchequer to undertake a review of banking regulation. The Chancellor has indicated that he will be presenting a White Paper on the supervision of banking in spring 2009 with the expectation that proposals for legislation will be presented to Parliament. He has also commissioned Sir David Walker to review the corporate governance of the UK banking industry. The results of this review are expected before the end of 2009. The FSA has re-examined its regulatory requirements and processes, substantially increasing regulatory capital requirements in October 2008. It has also been undertaking a Supervisory Enhancement Programme that will increase both the resources devoted to supervision and the intensity of supervision.

On 21st February 2009, the Banking Act 2009 came into force which provides a permanent regime to allow the FSA, the UK Treasury and the Bank of England (the 'Tripartite Authorities') to resolve failing banks in the UK. The Banking Act aims to balance the need to protect depositors and prevent systemic failure with the potentially adverse consequences that using powers to deal with those events could have on private law rights, and, as a consequence, wider markets and investor confidence.

These powers, which apply regardless of any contractual restrictions, include (a) power to issue share transfer orders pursuant to which there may be transferred to a commercial purchaser or Bank of England entity, all or some of the securities issued by a bank. The share transfer order can extend to a wide range of 'securities' including shares and bonds issued by a UK Bank (including Barclays Bank PLC) or its holding company (Barclays PLC) and warrants for such and (b) the power to transfer all or some of the property, rights and liabilities of the UK bank to a purchaser or Bank of England entity. In certain circumstances encumbrances and trusts can be over-reached. Power also exists to override any default provisions in transactions otherwise affected by these powers. Compensation may be payable in the context of both share transfer orders and property appropriation. In the case of share transfer orders any compensation will be paid to the person who held the security immediately before the transfer, who may not be the encumbrancer.

The Banking Act also vests power in the Bank of England to override, vary or impose contractual obligations between a UK bank or its holding company and its former group undertakings (as defined in the Banking Act), for reasonable consideration, in order to enable any transferee or successor bank of the UK bank to operate effectively. There is also power for the Treasury to amend the law (save for a provision made by or under the Banking Act) by order for the purpose of enabling it to use the special resolution regime powers effectively, potentially with retrospective effect. The Banking Act also gives the Bank of England statutory responsibility for financial stability in the UK and for the oversight of payment systems.

Amendments are being made to the EU framework of directives, including to the Capital Requirements Directive and to the Directive on Deposit Guarantee Schemes. Further amendments to EU regulatory requirements are likely as the EU develops its response to the financial crisis, including the structure of the regulatory system in Europe as proposed in the report of a high-level Commission group published on 25 February 2009.

In the United States, as elsewhere, recent market disruptions and economic conditions have led to numerous proposals for changes and significant increases in the regulation of the financial services industry. However, given the current environment and status of such proposals, it is difficult to determine the nature and form of any regulation that may arise in the United States from any such proposals.

Accelerate growth of global businesses

Lehman Brothers Acquisition

The acquisition of Lehman Brothers North American businesses accelerated the execution of our strategy of diversification by geography and business in pursuit of profitable growth on behalf of our shareholders. It has created a premier integrated global investment banking company with a leading presence in all major markets and across all major lines of business including: equity capital markets, debt capital markets, mergers and acquisitions, commodities trading and foreign exchange. For Barclays Wealth, the acquisition gives us a strong platform from which to extend our wealth management offering in the Americas.

Member of the International Advisory Panel of the Monetary Authority of Singapore since 2006.

14. Robert E Diamond Jr

President, Barclays PLC and CEO, Investment Banking and

Investment Management

Executive Director and member of Executive Committee (Age 57)

Bob is responsible for the Investment Banking and Investment Management business of the Barclays Group, comprising of Barclays Capital, Barclays Global Investors and Barclays Wealth. He previously worked for Morgan Stanley and CS First Boston, where he was Vice-Chairman and Head of Global Fixed Income and Foreign Exchange.

Term of office Bob was appointed President of Barclays PLC and became an executive Director in June 2005. He has been a member of the Barclays Executive Committee since September 1997. Bob was last re-elected by shareholders at the AGM in 2006, following his appointment.

External appointments Chairman of Old Vic Productions PLC since September 2007.

15. Christopher Lucas

Group Finance Director

Executive Director and member of Executive Committee (Age 48)

Chris has worked across financial services for most of his career, including three years in New York as Head of the US Banking Audit Practice of PricewaterhouseCoopers LLP. Chris joined Barclays from PricewaterhouseCoopers LLP, where he was UK Head of Financial Services and Global Head of Banking and Capital Markets. He was Global Relationship Partner for Barclays for the 1999-2004 financial years and subsequently held similar roles for other global financial services organisations.

Term of office Chris was appointed Group Finance Director and became a member of the Executive Committee in April 2007. Chris was last re-elected by shareholders at the AGM in 2007, following his appointment.

External appointments UK Head of Financial Services and Global Head of Banking and Capital Markets of PricewaterhouseCoopers LLP until 2006.

16. Frederik (Frits) Seegers

Chief Executive, Global Retail and Commercial Banking

Executive Director and member of Executive Committee (Age 50)

Frits is responsible for the Global Retail and Commercial Banking business of the Barclays Group, which includes UK Retail Banking, Barclays Commercial Bank, Barclaycard, GRCB - Western Europe, GRCB - Emerging Markets and GRCB - Absa. Frits joined Barclays from Citigroup where he held a number of senior positions over the 17 years he worked there. Most recently, he was CEO Global Consumer Group with a remit covering all retail operations in Europe, the Middle East and Africa. He was also a member of the Citigroup Operating Committee and the Citigroup Management Committee. He was CEO of Consumer Banking for Asia Pacific, covering 11 consumer markets, between 2001 and 2004. Under his leadership, this region was the fastest growing part of Citigroup. Frits was a non-executive Director of Absa Group Limited from 2006 until February 2009.

Term of office Frits joined the Board and the Executive Committee in July 2006. Frits was last re-elected by shareholders at the AGM in 2007, following his appointment.

External appointments Chief Executive Officer of Citigroup International PLC until 2006.

Business Review

The Company is required to set out in this report a fair review of the business of the Group during the financial year ended 31st December 2008 and of the position of the Group at the end of the financial year and a description of the principal risks and uncertainties facing the Group (known as a 'Business Review'). The purpose of the Business Review is to enable shareholders to assess how the Directors have performed their duty under section 172 of the Companies Act 2006 (duty to promote the success of the Company).

The information that fulfils the requirements of the Business Review can be found in the following sections of the Annual Report:

	Pages
– Key performance indicators	6-9
– Financial Review	15-65
– Sustainability	66-68
– Risk factors	70-74
which are incorporated into this report by reference.	

Profit Attributable

The profit attributable to equity shareholders of Barclays PLC for the year amounted to £4,382m, compared with £4,417m in 2007.

Dividends

As announced on 13th October 2008, in the light of the new capital ratios agreed with the Financial Services Authority (FSA) and in recognition of the need to maximise capital resources in the current economic climate, the Board concluded that it would not be appropriate to pay a final dividend for 2008. The Board intends to resume dividend payments in the second half of 2009, at which time it is intended to pay dividends quarterly. The interim dividend for the year ended 31st December 2008 of 11.5p per ordinary share was paid on 1st October 2008 and the total distribution for 2008 is 11.5p (2007: 34.0p per ordinary share). The staff shares were re-purchased by the Company during the year. The dividends for the year have absorbed a total of £915m (2007: £2,253m).

Share Capital

At the 2008 Annual General Meeting, shareholders approved the creation of Sterling, Dollar, Euro and Yen preference shares ('preference shares') in order to provide the Group with more flexibility in managing its capital resources. As at 27th February 2009 (the latest practicable date for inclusion in this report) no preference shares have been issued.

In order to minimise the dilutive effect on existing shareholders of the issuance of 336,805,556 ordinary shares in 2007, at the start of 2008 the Company purchased in the market for cancellation 36,150,000 of its ordinary shares of 25p each, at a total cost of £171,923,243 (this was in addition to the 299,547,510 shares purchased for cancellation in 2007). During 2008 the Company purchased all of its staff shares in issue, following approval for such purchase being given at the 2008 Annual General Meeting, at a total cost of £1,023,054. As at 27th February 2009, the Company had an unexpired authority to repurchase shares up to a maximum of 984,960,000 ordinary shares.

The issued ordinary share capital was increased by 1,772m ordinary shares during 2008. In addition to those issued as a result of the exercise of options under the Sharesave and Executive Share Option Schemes during the year, the following share issues took place:

- On 4th July 2008, the Company issued 168.9 million new ordinary shares in a firm placing to Sumitomo Mitsui Banking Corporation.
- On 22nd July 2008, the Company issued 1,407.4 million new ordinary shares following a placing to Qatar Holding LLC, Challenger Universal Limited (a company representing the beneficial interests of His Excellency Sheikh Hamad Bin Jassim Bin Jabr Al-Thani, the chairman of Qatar Holding LLC, and his family), China Development Bank, Temasek Holdings (Private) Limited and certain leading institutional shareholders and other investors, which shares were available for clawback in full by means of an open offer to existing shareholders. Valid applications under the open offer were received from qualifying shareholders in respect of approximately 267 million new ordinary shares in aggregate, representing 19.0% of the shares offered pursuant to the open offer. Accordingly, the remaining 1,140.3 million shares were allocated to the various investors with whom they had been conditionally placed.

- On 18th September 2008, the Company issued 226 million new ordinary shares to certain institutional investors.

- During the period 27th November 2008 to 31st December 2008, 33,000 ordinary shares were issued following conversion of Mandatorily Convertible Notes at the option of their holders.

At 31st December 2008 the issued ordinary share capital totalled 8,371,830,617 shares. Ordinary shares represent 100% of the total issued share capital as at 31st December 2008.

The Company's Memorandum and Articles of Association, a summary of which can be found in the Shareholder Information section on pages 315-323, contain the following details, which are incorporated into this report by reference:

- The structure of the Company's capital, including the rights and obligations attaching to each class of shares.
- Restrictions on the transfer of securities in the Company, including limitations on the holding of securities and requirements to obtain approvals for a transfer of securities.
- Restrictions on voting rights.
- The powers of the Directors, including in relation to issuing or buying back shares in accordance with the Companies Act 1985. It will be proposed at the 2009 AGM that the Directors be granted new authorities to allot and buy back shares under the Companies Act 1985.
- Rules that the Company has about the appointment and removal of Directors or amendments to the Company's Articles of Association.

Employee Benefit Trusts ('EBTs') operate in connection with certain of the Group's Employee Share Plans ('Plans'). The Trustees of the EBTs may exercise all rights attached to the shares in accordance with their fiduciary duties other than as specifically restricted in the relevant Plan governing documents. The trustees of the EBTs have informed the Bank that their normal policy is to abstain from voting in respect of the Barclays shares held in trust. The trustees of the Sharepurchase EBT may vote in respect of Barclays shares held in the Sharepurchase EBT, but only at the discretion of the participants. The trustees will not otherwise vote in respect of shares held in the Sharepurchase EBT.

Mandatorily Convertible Notes

On 27th November 2008, Barclays Bank PLC issued £4,050m of 9.75% Mandatorily Convertible Notes (MCNs) maturing on 30th September 2009 to Qatar Holding LLC, Challenger Universal Limited and entities representing the beneficial interests of HH Sheikh Mansour Bin Zayed Al Nahyan, a member of the Royal Family of Abu Dhabi and existing institutional shareholders and other institutional investors. If not converted at the holders' option beforehand, these instruments mandatorily convert to ordinary shares of Barclays PLC on 30th June 2009. The conversion price is £1.53276 and, after taking into account MCNs that were converted on or before 31st December 2008, will result in the issue of 2,642 million new ordinary shares.

If there is a change of control of Barclays PLC following a takeover bid, Barclays PLC must (so far as legally possible) use all reasonable endeavours to cause the corporation which then controls Barclays PLC to execute a deed poll providing that the holders of the MCNs shall have the right (during the period ending on 30th June 2009) to convert the MCNs into, and to receive on a mandatory conversion, as the case may be, the class and amount of shares and other securities and property receivable upon such a takeover by the holders of the number of ordinary shares as would have been issued on conversion of the MCNs had such MCNs been converted immediately prior to the completion of such takeover.

The issue of new ordinary shares or certain other securities and rights of the Company, at any time during the period commencing on 27th November 2008 and ending on the date on which a holder exercises its optional conversion right or on the mandatory conversion date, at a price (the 'Future Placing Price') lower than the then current conversion price will (subject to exceptions for ordinary shares issued pursuant to employee share schemes, under the warrants or as a result of certain corporate events) result in a downward adjustment to the conversion price (subject to a minimum conversion price of the then par value per ordinary share (currently 25 pence)) so that it equals the Future Placing Price. The conversion price will also be subject to adjustment if the Company distributes an extraordinary dividend or if certain dilutive events occur, including bonus issues, rights issues or an adjustment to the nominal value or redenomination of the ordinary shares.

Warrants

On 31 st October 2008 Barclays PLC issued, in conjunction with a simultaneous issue of Reserve Capital Instruments issued by Barclays Bank PLC, warrants to subscribe for up to 1,516.9 million new ordinary shares at a price of £1.97775 to Qatar Holding LLC and HH Sheikh Mansour Bin Zayed Al Nahyan. The warrants may be exercised at any time up to close of business on 31 st October 2013.

If there is a change of control of Barclays PLC following a takeover bid, Barclays PLC must (so far as legally possible) use all reasonable endeavours to cause the corporation which then controls Barclays PLC to execute a deed poll providing that the holders of the warrants shall have the right (during the period in which the warrants are exercisable) to exercise the warrants into the class and amount of shares and other securities and property receivable upon such a takeover by the holders of the number of ordinary shares as would have been issued on exercise of the warrants had such warrants been exercised immediately prior to the completion of such takeover.

The warrants contain provisions for the adjustment of the gross number of ordinary shares in the event of the occurrence of certain dilutive events including, amongst others, extraordinary dividends, bonus issues, alterations to the nominal value of ordinary shares and rights issues.

Substantial Shareholdings

Substantial shareholders do not have different voting rights from those of other shareholders. As at 27th February 2009, the Company had been notified under Rule 5 of the Disclosure and Transparency Rules of the FSA of the following holdings of voting rights in its shares:

	No. of ordinary shares	
Qatar Holding LLC	522,755,622	6.4%
Axa S.A.	460,195,183	5.5%
Legal & General Group plc	330,460,896	4.1%

Board Membership

The membership of the Boards of Directors of Barclays PLC and Barclays Bank PLC is identical and biographical details of the Board members are set out on pages 152 and 153.

Patience Wheatcroft and Sir Michael Rake were appointed as non-executive Directors with effect from 1 st January 2008. Simon Fraser will join the Board as a non-executive Director with effect from 10th March 2009, subject to regulatory approvals. Dr Danie Cronjé left the Board on 24th April 2008 and Gary Hoffman left the Board on 31 st August 2008.

Retirement and Re-election of Directors

As announced on 18th November 2008, at the 2009 AGM all Directors will stand for re-election, with the exception of Sir Nigel Rudd and Professor Dame Sandra Dawson, who will retire at the conclusion of the 2009 AGM and are not offering themselves for re-election.

Directors' Interests

Directors' interests in the shares of the Group on 31 st December 2008 are shown on pages 178 and 180.

Directors' Emoluments

Information on emoluments of Directors of Barclays PLC, in accordance with the Companies Act 1985 and the Listing Rules of the United Kingdom Listing Authority, is given in the Remuneration Report on pages 171 to 186 and in Note 43 to the accounts.

Directors' Indemnities

The Board believes that it is in the best interests of the Group to attract and retain the services of the most able and experienced Directors by offering competitive terms of engagement, including the granting of indemnities on terms consistent with the applicable statutory provisions. Qualifying third party indemnity provisions (as defined by section 234 of the Companies Act 2006) were accordingly in force during the course of the financial year ended 31 st December 2008 for the benefit of the then Directors and, at the date of this report, are in force for the benefit of the Directors in relation to certain losses and liabilities which they may incur (or have incurred) in connection with their duties, powers or office.

Activities

Barclays PLC Group is a major global financial services provider engaged in retail and commercial banking, credit cards, investment banking, wealth management and investment management services. The Group operates through branches, offices and subsidiaries in the UK and overseas.

Community Involvement and Charitable Donations

Barclays has an extensive community programme covering many countries around the world. The Group provides funding and support to over 7,000 charities and voluntary organisations, ranging from small, local charities, like Passage (UK), to international organisations like the Red Cross. We also have a very successful employee programme which in 2008 saw more than 57,000 employees and pensioners worldwide taking part in Barclays-supported volunteering, giving and fundraising activities. Further information on our community involvement is given on pages 66 and 67.

The total commitment for 2008 was £52.2m (2007: £52.4m). The Group committed £27.7m in support of the community in the UK (2007: £38.9m) and £24.5m was committed in international support (2007: £13.5m). The UK commitment includes £19.6m of charitable donations (2007: £30.4m).

Political Donations

The Group did not give any money for political purposes in the UK nor did it make any donations to EU political organisations or incur any EU political expenditure during the year.

Absa Group Limited, in which the Group acquired a majority stake in 2005, made donations totalling £186,589 in 2008 (2007: £170,142) in accordance with its policy of making political donations to the major South African political parties as part of their Democracy Support Programme. Donations are made to parties with more than three seats in the National Parliament as confirmed by the Independent Electoral Commission. Support for the deepening of democracy in South Africa remains paramount for the new government. The Group made no other political donations in 2008.

At the AGM in 2008, shareholders gave a limited authority for Barclays PLC and its subsidiaries to make political donations and incur political expenditure, within an agreed limit, as a precautionary measure in light of the wide definitions in the Companies Act 2006. This was similar to an authority given by shareholders in 2007. This authority, which has not been used, expires at the conclusion of the AGM held this year, or, if earlier, 30th June 2009.

The Companies Act 2006 largely restates the provisions of The Political Parties, Elections and Referendums Act 2000. The risk of inadvertently breaching the Companies Act 2006 remains, and the Directors consider it prudent to seek a similar authority from shareholders. A resolution to authorise Barclays PLC and its subsidiaries to make EU political donations and incur EU political expenditure up to a maximum aggregate sum of £125,000 is therefore being proposed at the Barclays PLC 2009 AGM.

Employee Involvement

Barclays is committed to ensuring that employees share in the success of the Group. Colleagues are encouraged to participate in share option and share purchase schemes and have a substantial sum invested in Barclays shares.

Employees are kept informed of matters of concern to them in a variety of ways, including the corporate news magazines, intranets, briefings and mobile phone SMS messaging. These communications help achieve a common awareness among employees of the financial and economic factors affecting the performance of Barclays.

Barclays is also committed to providing employees with opportunities to share their views and provide feedback on issues that are important to them. An annual Employee Opinion Survey is undertaken across Global Retail and Commercial Banking and Group Centre with results being reported to the Board and the Board HR and Remuneration Committee, all employees and to our European Works Council, Africa Forum, Unite (Amicus section), our recognised union in the UK and other recognised unions worldwide. Roadshows and employee forums also take place.

In addition, Barclays undertakes regular and formal consultations with our recognised trade unions and works councils internationally.

Diversity and Inclusion

The diversity agenda at Barclays seeks to include customers, colleagues and suppliers. Our objective is to recruit and retain the best people, regardless of (but not limited to) race, religion, age, gender, sexual orientation or disability. We strive to ensure our workforce reflects the communities in which we operate and the international nature of the organisation. We recognise that diversity is a key part of responsible business strategy in support of our increasingly global business. Barclays is committed to providing additional support to employees with disabilities and making it easier for them to inform us of their specific

requirements, including the introduction of a dedicated intranet site and disability helpline. Through our Reasonable Adjustments Scheme, appropriate assistance can be given, including both physical workplace adjustments, and relevant training and access to trained mentors is also provided for disabled employees. A wide range of recruitment initiatives have been taken to increase the number of people with disabilities working in Barclays.

Health and Safety

Barclays is committed to ensuring the health, safety and welfare of our employees and to providing and maintaining safe working conditions. Barclays regards legislative compliance as a minimum and, where appropriate, we seek to implement higher standards. Barclays also recognises its responsibilities towards all persons on its premises, such as contractors, visitors and members of the public, and ensures, so far as is reasonably practicable, that they are not exposed to significant risks to their health and safety.

Barclays regularly reviews its Statement of Health and Safety Commitment, issued with the authority of the Board and which applies to all business areas in which Barclays has operational control. In this statement Barclays commits to:

- demonstrate personal leadership that is consistent with this commitment;
- provide the appropriate resources to fulfil this commitment;
- carry out risk assessments and take appropriate actions to mitigate the risks identified;
- consult with our employees on matters affecting their health and safety;
- ensure that appropriate information, instruction, training and supervision are provided;
- appoint competent persons to provide specialist advice; and
- review Barclays Health and Safety Group Process and the Statement of Commitment, at regular intervals.

Barclays monitors its health and safety performance using a variety of measurements on a monthly basis and the Board HR and Remuneration Committee receives annual reports on health and safety performance from the Human Resources Director. As part of its Partnership Agreement with Unite (Amicus section), Barclays currently funds full time Health and Safety Representatives.

Creditors' Payment Policy

Barclays values its suppliers and acknowledges the importance of paying invoices, especially those of small businesses, in a timely manner. It is the Group's practice to agree terms with suppliers when entering into contracts. We negotiate with suppliers on an individual basis and meet our obligations accordingly. The Group does not follow any specific published code or standard on payment practice.

Paragraph 12(3) of Schedule 7 of the Companies Act 1985 requires disclosure of trade creditor payment days. Disclosure is required by the Company, rather than the Group. The Group's principal trading subsidiary in the UK is Barclays Bank PLC, the accounts for which are prepared in accordance with International Financial Reporting Standards. The components for the trade creditor calculation are not easily identified. However, by identifying as closely as possible the components that would be required if Schedule 4 of the Companies Act 1985 applied, the trade creditor payment days for Barclays Bank PLC for 2008 were 24 days (2007: 27 days). This is an arithmetical calculation and does not necessarily reflect our practice, which is described above, nor the experience of any individual creditor.

Essential business contracts

There are no persons with whom the Group has contractual or other arrangements that are considered essential to the business of the Group.

Research and Development

In the ordinary course of business, Barclays develops new products and services in each of its business units.

Financial Instruments

The Group's financial risk management objectives and policies, including the policy for hedging each major type of forecasted transaction for which hedge accounting is used, and the exposure to market risk, credit risk and liquidity risk are set out in pages 75 to 126 under the headings, 'Barclays approach to risk management', 'Credit Risk Management', 'Market risk management', 'Liquidity Risk Management' and 'Derivatives' and in Note 14 and Notes 46 to 49 to the accounts.

Events after the Balance Sheet Date

On 2nd February 2009, Barclays completed the acquisition of PT Bank Akita, which was announced initially on 17th September 2008, following the approval

of the Central Bank of Indonesia. On 17th February 2009, Barclays announced that Barclays Capital will discontinue operations at its EquiFirst subsidiary due to the market environment and strategic direction of the Group.

The Auditors

The Board Audit Committee reviews the appointment of the external auditors, as well as their relationship with the Group, including monitoring the Group's use of the auditors for non-audit services and the balance of audit and non-audit fees paid to the auditors. More details on this can be found on pages 212 and 213 and Note 9 to the accounts. Having reviewed the independence and effectiveness of the external auditors, the Committee has recommended to the Board that the existing auditors, PricewaterhouseCoopers LLP, be reappointed. PricewaterhouseCoopers LLP have signified their willingness to continue in office and ordinary resolutions reappointing them as auditors and authorising the Directors to set their remuneration will be proposed at the 2009 AGM.

So far as each of the Directors are aware, there is no relevant audit information of which the Company's auditors are unaware. Each of the Directors has taken all the steps that he or she ought to have taken as a Director in order to make himself or herself aware of any relevant audit information and to establish that the Company's auditors are aware of that information. For these purposes, 'relevant audit information' means information needed by the Company's auditors in connection with preparing their report.

The Annual General Meeting

The Barclays PLC AGM will be held at The Queen Elizabeth II Conference Centre on Thursday 23rd April 2009. The Notice of AGM is included in a separate document sent to shareholders with this report. A summary of the resolutions being proposed at the 2009 AGM is set out below:

Ordinary Resolutions

- To receive the Directors' and Auditors' Reports and the audited accounts for the year ended 31st December 2008.
- To approve the Directors' Remuneration Report for the year ended 31st December 2008.
- To re-elect the following Directors:
 - Simon Fraser
 - Marcus Agius
 - David Booth
 - Sir Richard Broadbent
 - Richard Leigh Clifford
 - Fulvio Conti
 - Robert E Diamond Jr
 - Sir Andrew Likierman
 - Christopher Lucas
 - Sir Michael Rake
 - Stephen Russell
 - Frederik Seegers
 - Sir John Sunderland
 - John Varley
 - Patience Wheatcroft
- To reappoint PricewaterhouseCoopers LLP as auditors of the Company.
- To authorise the Directors to set the remuneration of the auditors.
- To authorise Barclays PLC and its subsidiaries to make political donations and incur political expenditure.
- To authorise an increase in the Company's authorised share capital.
- To renew the authority given to the Directors to allot securities.

Special Resolutions

- To renew the authority given to the Directors to allot equity securities for cash other than on a pro-rata basis to shareholders and to sell treasury shares.
- To renew the Company's authority to purchase its own shares.
- To permit General Meetings to continue to be called on 14 clear days' notice.

This is only a summary of the business to be transacted at the meeting and you should refer to the Notice of AGM for full details.

By order of the Board

Lawrence Dickinson
Company Secretary
5th March 2009

Group Chairman's Introduction

I am pleased to report to you on the activities of the Board and its Committees during 2008. Our report sets out how we have complied with the UK Combined Code on Corporate Governance (the Code) and also gives further details of the matters that the Board and its principal Committees have considered over the year.

The year proved to be extremely challenging for the financial services industry as increasing vulnerabilities exposed in the global financial system created a period of exceptional instability.

During October 2008, it became clear that an industry-wide solution to the risks of systemic failure in the UK financial services sector was needed. The outcome of discussions between the UK's FSA and all UK banks was that we, along with many of our competitors, were required to raise additional equity and Tier 1 capital to take our capital ratios well beyond the levels we had previously agreed with our regulators (the 'Capital Raising').

The background to the Capital Raising announced by Barclays on 31st October 2008 is set out in my statement on pages 10 and 11. In the extraordinary circumstances leading up to that announcement, the Board had choices to make – choices not available to all banks. These choices entailed exceptionally difficult judgements made in market circumstances where from one day to the next nothing could be taken for granted.

These choices included retaining independent control of the business in undertaking the recapitalisation required by the authorities; recapitalising the business in one market operation well in advance of the June 2009 deadline set by the authorities; and effecting a recapitalisation under which all shareholders were not afforded their pre-emption rights.

The Board did not take any of these decisions lightly: its governance processes were rigorous. It met frequently, debated the issues at length, heard differing views and arguments, sought external advice and consulted representative shareholder bodies. The decisions it made were reached in the interests of shareholders as the Board, in the circumstances at the time, perceived them to be. These included forming judgements about the earnings per share and return on capital consequences of the Capital Raising for existing shareholders.

The Board believes that the decisions made have resulted in the Group being able to maintain its strategic momentum. The Directors deeply regret, however, that the Capital Raising denied Barclays then existing shareholders their full rights of pre-emption with respect to the ordinary shares issued. The Directors recognise that there is a high level of unhappiness on the part of some shareholders that the principle of pre-emption was breached, with consequent dilution of shareholdings and that, were it not to avoid the risk of destabilising the Company or the system, more of them may have voted against the enabling resolution at the General Meeting on 24th November 2008.

The Directors wish to place on record both their appreciation of the support received from shareholders in difficult circumstances in completing the Capital Raising and to re-affirm their fundamental commitment to the principle of pre-emption. The Board is clear that the extraordinary circumstances which they were required to deal with were so unusual as to be effectively unique.

Marcus Agius
Group Chairman
5th March 2009

Statements of Compliance

UK Combined Code on Corporate Governance

As Barclays is listed on the London Stock Exchange, we comply with the Code. For the year ended 31st December 2008, we have complied with the relevant provisions set out in section 1 of the Code and applied the principles of the Code as described in this report.

NYSE Corporate Governance Rules

Barclays has American Depositary Receipts listed on the New York Stock Exchange (NYSE) and is also subject to the NYSE's Corporate Governance rules (NYSE Rules). We are exempt from most of the NYSE Rules, which domestic US companies must follow, because we are a non-US company listed on the NYSE. However, we are required to provide an Annual Written Affirmation to the NYSE of our compliance with the applicable NYSE Rules and must also disclose any significant differences between our corporate governance practices and those followed by domestic US companies listed on the NYSE. As our main listing is on the London Stock Exchange, we follow the UK's Combined Code. Key differences between the Code and NYSE Rules are set out later in this report.

Corporate governance report

Corporate governance framework

The Group operates within a comprehensive governance framework, which is set out in the diagram below. Details of the Group's risk management framework can be found on pages 75 to 79.

The Board is responsible for managing the Company on behalf of its shareholders and each Director must act in a way that he or she considers promotes the long-term success of the Company for the benefit of those shareholders as a whole. The Board also ensures that an appropriate balance between promoting long-term growth and delivering short-term objectives is achieved. The Board delegates responsibility for the day-to-day management of the Company to the Group Chief Executive, who is then responsible for ensuring that the business is operating effectively. The Group Chief Executive is supported by the Executive Committee, which he chairs, and the Executive Committee is supported by a number of management committees, including the Disclosure Committee. Details of the Disclosure Committee are set out on page 168. This report sets out how the Board and its Committees work within the governance framework and corporate governance guidelines.

The Board has eight scheduled Board meetings each year. Strategy is reviewed regularly at these meetings and there is normally a day and a half offsite meeting to consider and approve the Group's strategy for the next year. In addition to the scheduled Board meetings in 2008, 23 additional Board meetings were held during the year. The purpose of these meetings was to discuss the difficult market conditions that existed during the year and in particular the three equity capital raising transactions that were undertaken: the £4.5bn Placing and Open Offer in July (the 'Open Offer'), the £701m Placing in September (the 'Placing') and the issue of £4.05bn in Mandatorily Convertible Notes, £3bn in Reserve Capital Instruments by Barclays Bank PLC and warrants for new ordinary shares in November (the 'Capital Raising'). There were 12 Board meetings held in October and November specifically to discuss the Capital Raising. There were also eight meetings of the Board Finance Committee, to which the Board delegated authority to approve certain aspects of the capital raising transactions and the acquisition of Lehman Brothers North American businesses. The Board Finance Committee comprises the Group Chairman, the Group Chief Executive and at least two independent non-executive Directors, typically the Deputy Chairman and Senior Independent Director.

These additional Board meetings, which were called at short notice, had attendance of 78% for the Open Offer (May-July 2008), 85% for the acquisition of the Lehman Brothers North American businesses (September 2008) and 90% for the Capital Raising (October-November 2008). Attendance at the Board Finance Committee was 100%. Those Directors who were unable to attend any meeting were briefed separately on the discussions at the meetings and their views were sought.

We arrange scheduled Board and Committee meetings at least a year in advance. All Directors are expected to attend each meeting and the attendance at scheduled Board meetings is set out on page 163. All Directors are provided with background papers and relevant information in advance of each meeting. If a Director is unable to attend a meeting because of exceptional circumstances, he or she will still receive the supporting papers and will usually discuss with the Chairman of the meeting any matters they wish to raise to ensure their views are given due consideration. The Group Chairman usually meets with the non-executive Directors, without the executive Directors or any senior management present, ahead of each scheduled Board meeting to brief them on the business of the meeting. These meetings give the non-executive Directors an opportunity to advise the Chairman if they have any particular questions they wish to raise. The Group Chairman, Group Chief Executive and Company Secretary are always available for the Directors to discuss any issues relating to the Board meetings or other matters. In 2008, all Directors contributed the appropriate amount of time needed to fulfil their responsibilities. Reasons for non-attendance are generally prior business, personal commitments or illness. Given market conditions in 2008, several meetings had to be rearranged at short notice and it was not always possible for all Directors to attend on the revised date.

The Group Chairman and the Company Secretary work together to make sure that the information communicated to the Board is accurate, timely and clear. This applies in advance of regular, scheduled Board meetings and in exceptional circumstances between those meetings. Timely communication of information was particularly important this year, given the need for the Board to respond to rapidly changing circumstances. Directors also have secure access to electronic copies of meeting papers and other key documents via a dedicated Directors' intranet, which includes past and current Board and Committee papers, reports, minutes, press coverage, analyst reports and material from briefing sessions. The services of the Company Secretary and his team are available to all Directors. Directors may also take independent professional advice on request, at the Company's expense.

The Board

Role of the Board

Directors are required, by UK company law, to act in a way they consider, in good faith, would promote the success of Barclays for the benefit of the shareholders as a whole. In doing so, the Directors must have regard (amongst other matters) to:

- the likely consequences of any decision in the long term;
- the interests of Barclays employees;

Corporate governance framework

- the need to foster Barclays business relationships with suppliers, customers and others;
- the impact of Barclays operations on the community and the environment;
- the desirability of Barclays maintaining a reputation for high standards of business conduct; and
- the need to act fairly as between shareholders of Barclays.

The role and responsibilities of the Barclays Board are set out in ‘Corporate Governance in Barclays’, which is available on our website at www.aboutbarclays.com.

The duties of Directors, described above, form part of their role and responsibilities. The Board is responsible to shareholders for creating and delivering sustainable shareholder value. In order to achieve this it must establish the objectives and policies of the Group that will deliver long-term value. The Board sets the overall strategic direction and ensures it is delivered within an appropriate framework of reward, incentive and control.

Another key responsibility of the Board is to ensure that management maintains a system of internal control that provides assurance of effective and efficient operations, internal financial controls and compliance with law and regulation. The Board considers the Group’s business and reputation and ensures that the controls in place are appropriate to the materiality of financial and other risks and the relative costs and benefits of implementing specific controls.

The Board has its powers set out in a formal schedule of matters reserved for the Board’s decision. A summary of the matters reserved for the Board is set out opposite. These are matters that are significant to the Group as a whole because of their strategic, financial or reputational implications or consequences. The Schedule of Matters Reserved to the Board was reviewed and updated during 2008 to ensure it remains appropriate.

Figure 1 illustrates how the Board spent its time at the scheduled Board meetings during 2008.

Activities in 2008

Typically, at each meeting, the Group Chief Executive and Group Finance Director report to the Board and one or two of the main businesses or functions also presents an update on the progress of implementing the strategy. The Board also receives reports from each of the principal Board Committees and may also receive reports from the Company Secretary on any relevant corporate governance matters.

Summary of Matters Reserved to the Board

- Approval of the Group’s strategy, Medium-Term and Short-Term Plans and Risk Appetite
- Monitoring delivery of the strategy and performance against plan
- Changes relating to capital structure or status as a PLC
- Approval of annual Capital Plan
- Approval of interim and final financial statements, dividends and any significant change in accounting policies or practices
- Authorisation of Directors’ conflicts or possible conflicts of interest
- Appointment (or removal) of Company Secretary
- Any share dividend alternative
- Remuneration of auditors and recommendations for appointment or removal of auditors
- Approval of all circulars, prospectuses and significant press releases
- Principal regulatory filings with stock exchanges
- Board appointments and removals
- Role profiles of key positions on the Board
- Terms of reference and membership of Board Committees
- Major acquisitions, mergers or disposals
- Major capital investments and projects
- Approval of the framework for determining the policy and specific remuneration of executive Directors
- Approval of Chairman and non-executive Director remuneration
- Major changes in employee share schemes
- Approval of Board and Board Committees performance evaluation process
- Determination of independence of non-executive Directors
- Approval of corporate governance framework
- Approval of division of responsibilities between the Group Chairman and Group Chief Executive
- Rules and procedures for dealing in Barclays securities

Fig 1: Board allocation of time

Corporate governance report

The Board allocated its time at scheduled Board meetings during 2008 as follows:

- received reports from the Group Chief Executive on strategic progress, matters considered by the Executive Committee and competitor activity;
- received reports from the Group Finance Director on the financial position of the Group, which included capital management and liquidity updates throughout 2008;
- received reports from each of the Board Committees;
- received reports from the Group Risk Director on risk management and from the Group General Counsel on legal risk;
- received reports from businesses or functions on progress against strategy, including Barclays Wealth, Barclays Capital, Barclaycard, Brand & Marketing, UK Retail Banking, Investment Banking and Investment Management in Asia Pacific and GRCB – Emerging Markets;
- approved the full year and half-year results for the Group;
- received a report on the effectiveness of the Board following the performance review;
- received reports on peer group comparisons of results following the release of preliminary and half-year results;
- received reports on governance issues and updates on the changes in company law;
- approved the revised fees recommended for non-executive Directors following a benchmarking comparison against our peer group;
- received external presentations on shareholder sentiment, including institutional perceptions, Group Strategy, Global Retail and Commercial Banking, Investment Banking and Investment Management, performance, capital management and communications;
- approved the strategy and Risk Appetite for the Group;
- received reports on franchise health and the Employee Opinion Survey; and
- received reports on the economic environment.

Adverse market conditions during 2008 led to the Board holding an additional 23 meetings during the year. These additional meetings discussed the impact of market conditions on performance, liquidity, the three capital raisings that were undertaken during the year and the acquisition of Lehman Brothers North American businesses. Ongoing and regular communication with the Board was vital during this period, a principle that had been established during the potential ABN AMRO acquisition in 2007. If the

additional meetings relating to the capital raisings are taken into account, the Board spent 33% of its time on capital management.

The capital raising that was announced on 31st October 2008 in response to the new higher capital targets which the FSA set for all UK Banks was the subject of considerable discussion. Seven Board meetings and three Board Finance Committee meetings were held during October to discuss the new requirements and Barclays response. The Board had to take some key decisions during this period, in particular:

- whether or not to accept government money over the weekend of 11th/12th October 2008;
- the decision to accelerate the timetable for raising required capital in the light of deteriorating market conditions;
- the decision not to pursue a rights issue in the light of practical and market constraints; and
- the decision to proceed with the Capital Raising as announced.

These decisions were only taken by the Board after rigorous discussion and having sought external advice. They were taken in the long-term interests of all shareholders.

Board structure and composition

The roles of the Group Chairman and Group Chief Executive are separate. In line with the recommendations of the Code, there is a strong independent element on the Board and at least half the Board are independent non-executive Directors. At the date of this report, the Board is comprised of the Group Chairman, four executive Directors and 11 non-executive Directors. The balance of the Board is illustrated by Figure 2.

The Group Chairman's main responsibility is to lead and manage the Board, ensuring that it discharges its legal and regulatory responsibilities effectively and fully. The Board has delegated the responsibility for the day-to-day running of the Group to the Group Chief Executive. The Group Chief Executive in turn leads the executive Directors in making and implementing operational decisions and is responsible for recommending strategy to the Board.

Although the Board of Directors has collective responsibility for the success of the Group, executive Directors are directly responsible for business operations, whereas non-executive Directors are responsible for bringing independent judgement and scrutiny to decisions taken by the Board. The non-executive Directors must satisfy themselves on the integrity of financial information and that financial controls and systems of risk management are robust. The Board has the benefit of a broad range of skills, knowledge and experience that the non-executive Directors have built up as Directors of other companies or business leaders, in government or in academia. Given the events of 2008 and the continuing uncertainty in the global financial services industry, the Board and, in particular, the Board Corporate Governance and

Fig 2: Balance of non-executive and executive Directors

Nominations Committee, is considering both the appropriate size and skills mix of the Board. As a financial services business, the Board aims to appoint non-executive Directors who have the necessary skills and experience required for a proper understanding of the Group's activities and associated risks. The Board also aims to have diverse geographical experience represented on the Board and this is illustrated in Figure 3.

The Charter of Expectations, which forms part of 'Corporate Governance in Barclays', includes detailed role profiles for each of the main positions on the Board, including that of the Group Chairman, Deputy Chairman, Senior Independent Director and both non-executive and executive Directors. Responsibilities general to all Directors include:

1. Providing entrepreneurial leadership of the Company, within a framework of prudent and effective controls, which enable risk to be assessed and managed.
2. Approving the Company's strategic aims, ensuring that the necessary financial and human resources are in place for the Company to meet its objectives and review management performance.
3. Setting the Company's values and standards and ensuring that its obligations to its shareholders and others are understood and met.

In addition, non-executive Directors have a responsibility to constructively challenge and develop proposals on strategy whilst scrutinising the performance of management in meeting the Group's strategic objectives. Following appropriate challenge and debate, the Board expects to reach clear decisions and to provide a framework of support for the executive Directors in their management of the Group's business.

The Charter of Expectations, including role profiles for key Board positions, is available from: www.aboutbarclays.com.

Sir Richard Broadbent continued in the role of Senior Independent Director during 2008. The role of the Senior Independent Director is to:

- Be available to shareholders if they have concerns relating to matters which contact through the normal channels of Group Chairman, Group Chief Executive or Group Finance Director has failed to resolve, or for which such contact is inappropriate.
- Maintain contact as required with major shareholders to understand their issues and concerns, including attending meetings where necessary with shareholders to listen to their views in order to help develop a balanced understanding of the issues and concerns of major shareholders.
- Meet with the non-executive Directors without the Group Chairman present at least annually and lead the Board in the ongoing monitoring and annual evaluation of the Group Chairman, including communicating results of the evaluation to the Group Chairman.

During the year, Sir Richard Broadbent attended meetings with a number of our institutional shareholders and shareholder bodies to discuss their views on the Group. Sir Richard also received feedback on the Group Chairman's performance following the annual Board Effectiveness Review and led discussions with the other non-executive Directors and the Group Chief Executive on the Group Chairman's performance.

Sir Nigel Rudd continued in the role of Deputy Chairman in 2008, providing support to the Group Chairman as required in carrying out his responsibilities.

The Board Corporate Governance and Nominations Committee is responsible for reviewing the structure, composition and balance of the Board and its principal Committees and recommends to the Board the appointment of any new Directors. It is important that the Board is refreshed regularly and the Committee conducts these reviews to ensure that there is an appropriate mix of skills and experience on the Board. Details of the experience and skills of each of the current Directors are set out in their biographies on pages 152 to 153. The length of tenure of the current non-executive Directors is illustrated in Figure 4.

In line with the recommendations of the Code, all Directors usually seek re-election every three years and any Directors appointed during the year seek re-election at the next annual general meeting (AGM). However, for the 2009 AGM, as set out in the Group Chairman's letter to shareholders dated 18th November 2008, all Directors will be seeking re-election, with the exception of Sir Nigel Rudd and Professor Dame Sandra Dawson, who will be retiring at the conclusion of the AGM. Details are set out in the Notice of Meeting.

External appointments contribute to an executive Director's ongoing development and experience and executive Directors are permitted to serve on one other listed company board, in addition to their role at Barclays. Other appointments may be taken up with the approval of the Group Chairman. All external appointments are considered in line with the Group's policy on Directors' Conflicts of Interest and, if appropriate, each appointment is authorised by the Board. Further details of the Group's policy on Directors' Conflicts of Interest are set out on page 162.

Independence of non-executive Directors

The Code sets out circumstances that may be relevant to the Board in determining whether each non-executive Director is independent. Barclays Charter of Expectations sets out specific criteria, which the Board considers are essential behaviours, to assess the independence of each non-executive Director, as follows:

- provides objective challenge to management;
- is prepared to challenge other's assumptions, beliefs or viewpoints as necessary for the good of the organisation;
- questions intelligently, debates constructively, challenges rigorously and decides dispassionately;

Fig 3: Geographical mix (main experience) of non-executive Directors

Fig 4: Length of tenure of non-executive Directors

- is willing to stand up and defend their own beliefs and viewpoints in order to support the ultimate good of the organisation; and
- has a good understanding of the organisation's business and affairs to enable them to properly evaluate the information and responses provided by management.

The Board considers non-executive Director independence on an annual basis, as part of each Director's performance review.

The Board Corporate Governance and Nominations Committee and subsequently the Board reviewed the independence of non-executive Directors in early 2009 and concluded that each of them continues to demonstrate these essential behaviours. In determining that each of the non-executive Directors remains independent, the Board considered in particular the following:

- Sir Nigel Rudd has served as a non-executive Director since 1996. The Code suggests that length of tenure is a factor that should be considered when determining whether a Director continues to be independent. As recommended by the Code, it is our policy that any Director who serves for more than nine years should seek annual re-election by shareholders and that all Directors subject to re-election should undergo a rigorous performance evaluation.

As a result of the annual performance review, the Board concluded that Sir Nigel Rudd continues to demonstrate the essential characteristics of independence expected by the Board. The Board continues to be regularly refreshed and the Board considers Sir Nigel's length of service, and the resulting experience and knowledge of Barclays he has gained, as being especially valuable. This proved particularly helpful during the difficult market conditions in 2008. Sir Nigel has stood for re-election annually at each AGM since 2005. Sir Nigel will, however, retire at the 2009 AGM and is not seeking re-election.

All Directors must report any changes in their circumstances to the Board and the Board reserves the right to terminate the appointment of a non-executive Director if there are any material changes in their circumstances that may conflict with their commitments as a Barclays Director or that may impact on their independence. Under UK company law, a Director must now seek authorisation before taking up any position with another company that conflicts, or may possibly conflict, with the Company's interests. Barclays Articles of Association contain provisions to allow the Directors to authorise situations of potential conflicts of interest so that a Director is not in breach of his/her duty under company law. All existing external appointments for each Director were considered and authorised by the Board in September 2008 and additional external appointments have been authorised at subsequent Board meetings following notification to the Company Secretary. Each authorisation is set out in a Conflicts Register. The Board Corporate Governance and Nominations Committee is responsible for conducting an annual review of the Conflicts Register and confirming to the Board that, where relevant, conflicts have been dealt with appropriately, and that the process for dealing with them is operating effectively.

Conflicts of Interest

The following Directors' Duties on Conflicts of Interest set out in the Companies Act 2006 (the Act) came into force on 1st October 2008:

- a duty not to accept benefits from third parties;
- a duty to avoid a situation in which he has, or can have, a direct or indirect interest that conflicts, or possibly may conflict, with the interests of the company (situational conflicts); and
- a duty to disclose any interest in a proposed or existing transaction or arrangement with the company (transactional conflicts).

Barclays Articles of Association were amended at the 2008 AGM to allow the Directors to authorise situational conflicts as permitted by the Act.

It is the responsibility of each Director to comply with the Act and Directors are required to notify Barclays in writing of any new situational or transactional conflicts. They are also required to consider the interests of their connected persons in case they amount to an indirect interest. Details of the potential conflict are submitted to the next Board meeting and the Directors, excluding the Director to whom the potential conflict relates, must carefully consider each potential conflict of interest before it is authorised, if appropriate.

Board and Committee Membership and Attendance

The table below sets out attendance of Directors at Board and Committee meetings in 2008.

Board Committees

Certain responsibilities of the Board are delegated to Board Committees to assist the Board in carrying out its functions and to ensure independent oversight of internal control and risk management. Membership of Board Committees is recommended to the Board by the Board Corporate Governance and Nominations Committee, which reviews Committee composition and balance regularly to ensure the Committees are refreshed. All members of principal Board Committees are non-executive Directors, although the Chairman is a member of the Board HR and Remuneration Committee. Each Board Committee's terms of reference set out the specific matters for which delegated authority has been given. These terms of reference, which are available on our website, are reviewed annually.

The Board has delegated authority to four principal Board Committees:

- Board Audit Committee
- Board Risk Committee
- Board Corporate Governance and Nominations Committee
- Board HR and Remuneration Committee

The number of meetings held and attendance at the Committee meetings is set out above in 'Board and Committee Membership and Attendance'. The activities of the Board Committees are set out on the pages 163 to 168.

The terms of reference for each of the principal Board Committees are available from the Corporate Governance section at: www.aboutbarclays.com.

Board Audit Committee

Stephen Russell (Chairman)
 Fulvio Conti
 Professor Dame Sandra Dawson
 Sir Andrew Likierman
 Sir Michael Rake

Secretary: Lawrence Dickinson

The Board Audit Committee terms of reference are available from the Corporate Governance section at: www.aboutbarclays.com.

In addition to the members of the Committee, there are a number of regular attendees at each meeting. The Group Chief Executive, Group Finance Director, Barclays Internal Audit Director, Group Risk Director, Group General Counsel and the lead external audit partner normally attend all scheduled Board Audit Committees. The Board Audit Committee members usually meet privately before each meeting to raise any concerns with the Chairman of the meeting and they also meet with the external auditors and the Barclays Internal Audit Director, without management present, at the end of most Committee meetings. Sir Andrew Likierman continues to fulfil his role as the 'financial expert' as defined by the US Sarbanes-Oxley Act of 2002 and, as a result of his accountancy background and his career with HM Treasury, has 'recent and relevant financial experience' as recommended by the Code. Sir Michael Rake will succeed Stephen Russell as Chairman of the Committee in March 2009. Sir Michael has significant audit experience having worked at KPMG from 1972-2007 where he was Chairman of KPMG International from 2002-2007.

Corporate governance report

Activities in 2008

Figure 5 illustrates how the Committee allocated its time in 2008. During 2008, the Committee:

- considered the information it would require during the coming year to enable it to discharge its responsibilities;
- considered the significant changes in financial markets and economic conditions and the impact on the areas of focus for the Committee;
- reviewed the Annual Report and Accounts and half-year Results and Interim Management Statements;
- reviewed in detail the valuations of Barclays Capital’s credit market exposures, reviewing mark-to-market valuations and accounting for derivatives and assessing the overall quality of earnings;
- reviewed the Group’s accounting policies and, in particular, the accounting for leveraged loans;
- considered control issues of Group level significance for different areas of the business;
- received reports on the control environment in each of the following businesses or functions: Barclays Wealth, Barclays Commercial Bank, Western Europe, Global Retail and Commercial Banking IT, Barclaycard, Global Payments, Emerging Markets, BGI, Absa and Barclays Capital;
- reviewed the effectiveness and independence of the Group statutory auditor;

- approved the re-appointment, remuneration and engagement letter of the Group statutory auditor;
- considered the provision of non-audit services by the Group statutory auditor – more details can be found in the box on page 165;
- received reports from the external and internal auditors;
- monitored the performance of the Internal Audit function;
- reviewed the Global Internal Audit Plan;
- reviewed the internal control and risk management systems;

Fig 5: Board Audit Committee allocation of time

Board Audit Committee Chairman’s Statement

We held ten meetings in 2008 and an overview of how we used our meetings is set out below.

Our areas of focus in 2008 were dominated by the continuing disruption to the credit markets and financial services sector as a whole. In early 2008, we held a separate session of the Committee on accounting for and valuation of derivatives and complex financial instruments and also reviewed the Group’s valuation methodology for these instruments. The latter comprises trading desk evaluation supported by independent price testing and benchmarking, followed by a review by Finance and Risk and by the external auditor.

When considering the Group’s preliminary and half-year results and interim management statements, we spent a significant amount of time reviewing the disclosures around and the fair value of Barclays Capital’s credit markets exposures, including asset backed securities and leveraged credit positions. As part of the approval of each results statement, we reviewed the fair value of the credit market exposures and the form and content of the disclosures. The review of the credit market exposure valuations included a review of marks by key asset categories, movements in exposures (including sales/paydowns) and a review of underlying collateral by vintage and rating. The Committee received at both the half-year and year-end and before each Interim Management Statement a specific presentation from Barclays Capital’s Chief Operating Officer and discussed the valuations with the Group Finance Director, Group Risk Director and, importantly, the Group’s external auditors. Reassurance was sought from independent Group control functions such as Risk and Finance, and the external auditors, that the individual marks were appropriate. The Committee was reassured that there were no significant variations between the prices at which assets were sold and the underlying marks. The Committee was content that the markets and models to which the valuations are marked are sufficiently robust to enable reliable and relevant valuations to be determined.

We also reviewed the controls around Barclays Capital’s complex financial instruments, as well as reviewing the overall control environment at Barclays Capital. The Committee has sought to learn lessons from events at our peers, receiving reports on the circumstances surrounding losses experienced at Société Générale and UBS. We discussed the overall impact of market conditions and the challenging financial markets on the remit of the Committee and this will help shape our agenda for 2009.

In the second half of the year, as the financial crisis started to evolve into a global economic downturn, the Committee directed increasing attention at the deepening economic downturn, reviewing the key controls by which consequent risk can be managed. As a result, impairment measurement, fraud controls, collections activities and day-to-day credit controls and security documentation are receiving increased scrutiny from the Committee. During the year we also received additional presentations and reports on the impact of the acquisition of the Lehman Brothers North

American businesses in September 2008, including an initial assessment of the risks and controls in that business and a report on the impact of the acquisition on financial reporting. In reviewing the Internal Audit Plan for 2009, we also challenged management to make sure that the Internal Audit function is appropriately resourced for the challenges ahead and is directing its attention on areas likely to come under pressure in the expected downturn.

Impairment numbers continue to be closely reviewed by the Committee. It reviews a paper prepared by the Risk function, which examines impairment on a business-by-business basis. It examines closely any amendments or overrides to models, compares trends and impairment levels with peers and seeks independent reassurance from the external auditor.

Our reviews of the control environment in each of our businesses in 2008 continued to focus on those areas where the Group’s business is expanding or which are deemed to be higher risk, including Emerging Markets. We also reviewed the controls around our key regulatory programmes, in particular, Sarbanes-Oxley and Basel II, and received regular reports on Sanctions compliance and Know Your Customer and Anti-Money Laundering controls.

The internal and external auditors are evaluated annually. Feedback on both is sought from key stakeholders in the Group via questionnaires with the results being presented to and discussed by the Committee. The Committee is satisfied with the performance of both auditors. During 2009, an external assessment of the internal audit function will be undertaken. The Committee has recommended to the Board and to shareholders that PwC should be re-appointed as the Group’s auditors at the AGM on 23rd April 2009. We are fully satisfied that PwC provides effective, independent challenge to management, which has been crucial in the current difficult environment, and has provided valued support to the Committee in the advice given and the clarity of their briefings and reports. The feedback received from other stakeholders through the annual evaluation exercise has been positive.

As Chairman of the Committee, I have liaised as appropriate with the Chairman of the Board HR and Remuneration Committee, particularly to draw attention to any specific aspects of the Group’s results which I feel he ought to be aware of when determining appropriate levels of compensation.

The Committee can confirm that it received sufficient, reliable and timely information from management to enable it to fulfil its responsibilities.

Stephen Russell
Chairman of the Board Audit Committee
5th March 2009

- considered the effectiveness of the Group’s internal controls over financial reporting;
- received regular reports on ‘Raising Concerns’, including whistleblowing;
- considered the Fraud Risk Control Framework; and
- reviewed its Terms of Reference to satisfy itself that they enable the Committee to fulfil its responsibilities.

The Committee also received regular updates during 2008 on:

- Basel II
- MiFID
- Sarbanes-Oxley
- Sanctions compliance

In February 2009, the Committee reviewed its activities in 2008 against its terms of reference and concluded that it had discharged the responsibilities delegated to it under those terms of reference.

Approval of financial statements

Barclays has a strong governance process in place to support its framework of disclosure controls and procedures. That process, in which the Board Audit Committee plays a key role, is illustrated in Figure 6.

The Legal and Technical Review Committee is an accounting, legal and regulatory compliance committee, which is responsible for reviewing the Group’s financial reports and disclosures to ensure that they have been subject to adequate verification and comply with legal and technical requirements. Meetings are attended by the Group’s auditors and US lawyers. The membership of the Disclosure Committee and its role is set out on page 168. The membership of the Executive Committee and its role is set out on pages 167 and 168.

This governance process is in place to ensure both management and the Board are given sufficient opportunity to review and challenge the Group’s financial statements and other significant disclosures before they are made public. It also provides assurance for the Group Chief Executive and Group Finance Director when providing certifications as required under the Sarbanes-Oxley Act 2002 and recommended by the Turnbull Guidance on Internal Control. Further details of the Group’s system of internal control and an assessment of its effectiveness may be found on page 187.

Non-Audit Services Policy

The Committee takes seriously its responsibility to put in place safeguards to auditor objectivity and independence. It has therefore established a policy on the provision of services by the Group’s statutory auditor. The Policy describes the circumstances in which the auditor may be permitted to undertake non-audit work for the Group. The Committee oversees compliance with the Policy and considers and approves requests to use the auditor for non-audit work. Allowable services are pre-approved up to £100,000, or £10,000 in the case of certain taxation services. The Company Secretary and his team deal with day-to-day administration of the Policy, facilitating requests for approval by the Committee. The Committee receives a report at each meeting on the non-audit services provided by the auditor and the Policy is reviewed by the Committee annually. Details of the services that are prohibited and allowed are set out below.

Services that are prohibited include:

- bookkeeping
- design and implementation of financial information systems
- appraisal or valuation services
- actuarial services
- internal audit outsourcing
- management and Human Resource functions
- broker or dealer, investment adviser or investment banking services
- legal, expert and tax services involving advocacy

Allowable services that the Committee will consider for approval include:

- statutory and regulatory audit services and regulatory non-audit services
- other attest and assurance services
- accountancy advice and training
- risk management and controls advice
- transaction support
- taxation services
- business support and recoveries
- translation services

Board Risk Committee

Sir Richard Broadbent (Chairman)
 David Booth
 Dr Danie Cronjé (to 24th April 2008)
 Sir Andrew Likierman
 Stephen Russell

Secretary: Lawrence Dickinson

The Board Risk Committee terms of reference are available from the Corporate Governance section at: www.aboutbarclays.com.

In addition to the Members of the Committee, all meetings are usually attended by the Group Finance Director and Group Risk Director. Barclays Internal Audit Director, Group General Counsel and Barclays external auditor, as well as other senior executives, also attend meetings of the Board Risk Committee, where appropriate.

The Board recognises that risk is a key parameter for the business. The Board Risk Committee provides monitoring and oversight of all Barclays risk activities. During 2008, the Committee received presentations and updates on key aspects of the external market conditions to ensure it was able to maintain an appropriate level of oversight and report effectively to the Board.

Activities in 2008

The Committee met four times in 2008 and Figure 7 shows how the Committee allocated its time at those meetings. During 2008, the Committee:

- received regular reports on, and considered, Risk Appetite and the Group’s risk profile, including key indicators for Risk Appetite, Group Impairment, Retail Credit Risk, Wholesale Credit Risk, Market Risk, Financial Crime, Operational Risk and Economic Capital;
- reviewed at each meeting updates on asset backed securities and leveraged credit markets, including the Group’s exposures to sub-prime and Alt-A markets, monoline insurers and leveraged loan underwriting positions;
- reviewed updates on liquidity risk;
- reviewed risk trends and risk management in GRCB – Emerging Markets and South Africa;
- received regular Forward Risk Trends reports, which set out the internal and external indicators that are showing signs of strain;
- reviewed the internal control framework;
- examined the risk control framework, and approved Group policies including the trading book policy, large exposures policy, liquidity policy, retail and wholesale credit impairment policies and the Group’s principal risks policy;
- reviewed Group-wide stress testing scenarios and results;
- reviewed in greater detail the process around setting annual Risk Appetite to establish the effectiveness of the process in responding to significant changes in economic and market conditions;
- reviewed the programme of actions being taken Group-wide to mitigate risk in view of deteriorating economic conditions in our major markets, such as the UK, US, South Africa and Spain;
- reviewed the Risk Appetite for the Group for 2009 and made recommendations to the Board; and
- received updates on Basel II.

Board Risk Committee Chairman’s Statement

2008 was a challenging year for risk management and this was reflected in the work of the Committee, which is detailed below. Particular areas worthy of note were:

- The Committee monitored the Group’s sub-prime exposures throughout the year. The reduction in limits and scale of the sub-prime business in 2007 reduced the impact of the crisis, although substantial write-downs were still required during 2008, reflecting a further deterioration in the markets and underlying performance of the assets.
- The Committee also monitored the Group’s exposure to other areas affected by the crisis, including other asset-backed securities, commercial mortgages and monoline insurers.
- The Committee reviewed and compared the write-downs being taken in the sub-prime and related areas with those being taken by the industry.
- The Committee monitored carefully the Group’s overall risk exposure in the light of the anticipated worsening in economic conditions and reviewed management plans to manage and mitigate the effects of the expected downturn in multiple markets.
- The Committee also monitored the capital position throughout the year relative to regulatory requirements and the Group’s overall risk appetite. Several steps were taken throughout the year to strengthen the capital base prior to the events of October 2008 when the regulator changed the capital requirements for banks, requiring a further and substantial capital raising.
- The Committee played an active role in informing Board debate about Risk Appetite and capital planning for 2009.

Sir Richard Broadbent
 Chairman of the Board Risk Committee
 5th March 2009

In March 2009, the Committee will review its activities in 2008 against its terms of reference.

More information on risk management and the internal control framework can be found in the Risk management report on pages 69 to 149.

Fig 7: Board Risk Committee allocation of time

Board Corporate Governance and Nominations Committee

Marcus Agius (Chairman)
 Sir Richard Broadbent
 Sir Nigel Rudd
 Stephen Russell
 Sir John Sunderland

Secretary: Lawrence Dickinson

The Board Corporate Governance and Nominations Committee terms of reference are available from the Corporate Governance section at: www.aboutbarclays.com.

The meetings are also attended by the Group Chief Executive.

Activities in 2008

Figure 8 shows how the Committee allocated its time at its meetings in 2008. During 2008, the Committee:

- reviewed Board and Board Committee composition to ensure the right mix of skills and experience are present;
- monitored the progress of the action plan arising from the 2007 Board Effectiveness Review and oversaw the conduct of the 2008 Board Effectiveness Review;
- reviewed the corporate governance disclosures for the 2007 Annual Report and considered the proposed disclosures for 2008;
- reviewed and updated Corporate Governance in Barclays and the Charter of Expectations; and
- reviewed succession plans for the Executive Committee and the position of Group Chief Executive.

The Committee also received updates on:

- the status of the Companies Act 2006 and, in particular, the new statutory statement of Directors' Duties on Conflicts of Interest.

During 2008, the Committee reviewed the composition of the Board and its principal Committees at each of its meetings. Following those deliberations, the Committee recommended to the Board that Sir Michael Rake succeed Stephen Russell as Chairman of the Board Audit Committee with effect from March 2009. No new Directors were appointed to the Board during 2008, other than Sir Michael Rake and Patience Wheatcroft, who joined the Board with effect from 1st January 2008.

Given that Sir Nigel Rudd and Professor Dame Sandra Dawson will be retiring from the Board at the 2009 AGM and Stephen Russell will be retiring in October 2009 on completion of nine years' service, the Committee also discussed both Board size and future Board composition and, in particular, given the continuing crisis in the world financial services industry, the type of skills and experience required in new non-executive Directors.

In early 2009, the Committee concluded that a non-executive Director with experience of institutional fund management should be sought and, with the assistance of external search consultants, Simon Fraser was identified as a candidate with the desired experience. He met with members of the Board Corporate Governance & Nominations Committee and his appointment was recommended to the Board, who approved his appointment as a Director. Simon will join the Board on 10th March 2009, subject to regulatory approvals.

Pursuant to an agreement entered into between Barclays and China Development Bank (CDB) in August 2007 for the subscription of Barclays ordinary shares, CDB retain the right to nominate a non-executive Director to the Board of Barclays but did not take up this right during 2008.

In January 2009, the Committee reviewed its activities in 2008 against its terms of reference and concluded that it had discharged the responsibilities delegated to it under those terms of reference.

Fig 8: Board Corporate Governance and Nominations Committee allocation of time

Board HR and Remuneration Committee

Sir Richard Broadbent (Chairman)
 Marcus Agius
 Leigh Clifford
 Sir John Sunderland

Secretary: Patrick Gonsalves

The Board HR and Remuneration Committee terms of reference are available from the Corporate Governance section at: www.aboutbarclays.com

Additional information on the role and activities of the Committee can be found in the Remuneration Report on pages 171 to 186, including the Group's revised philosophy on remuneration, an explanation of the Group's remuneration arrangements and a description of the framework for future decisions in this area.

Activities in 2008

Figure 9 shows how the Committee allocated its time at its meetings in 2008. The Committee held additional meetings in November 2008 and January 2009, as a result of the rapidly changing economic environment and the intense scrutiny from regulators and other interested parties that the issue of remuneration has received.

During 2008 the Committee:

- continued to review the compensation frameworks in place for each area of the Group;
- reviewed executive compensation;
- reviewed the Group's approach to remuneration in light of market conditions;
- approved the Pensions Strategy and other pension matters;
- reviewed global staff benefits;
- monitored the implementation of the talent agenda;
- reviewed the Group's Health and Safety and Diversity and Inclusion performance;
- considered incentive funding for 2008 for each main business area;
- reviewed, current and future, Group and business long-term incentive arrangements; and
- held discussions with external advisers to the Committee on a range of issues, including obtaining market data on remuneration levels in specified markets.

The Committee received valuable support and advice from its independent advisers, Towers Perrin MGMC and Kepler Associates.

Management Executive Committee

Under the leadership of the Group Chief Executive, the executive Directors are responsible for managing the Group's business and making and executing operational decisions. The Executive Committee supports the Group Chief Executive and it meets every fortnight to discuss strategy development and policies to recommend to the Board. The Executive Committee is also responsible for implementing approved strategy and is supported by other Committees, including the Disclosure Committee.

Fig 9: Board HR and Remuneration Committee allocation of time

Executive Committee

John Varley (Chairman)
Bob Diamond
Chris Lucas
Frits Seegers

Disclosure Committee

The Disclosure Committee is chaired by Chris Lucas, the Group Finance Director. Members include the Company Secretary, Group General Counsel, Director, Investor Relations, Group Risk Director, Barclays Corporate Affairs Director, Group Financial Controller and Barclays Treasurer. The Committee:

- considers and reviews the preliminary and half-year results, Annual Report/Annual Report on Form 20F and the Annual Review; and
- considers Interim Management Statements released to the Stock Exchange.

The Committee also considers the content, accuracy and tone of significant other announcements that are proposed to be made in accordance with the FSA's Disclosure and Transparency Rules.

The Committee reports to the Executive Committee and also reports to the Board Audit Committee, documenting its conclusions about the effectiveness of the design and operation of the disclosure controls and procedures. This forms part of the combined assurance given to the Board Audit Committee together with the report on the Turnbull Review of Internal Controls recommended by the Code.

Board Effectiveness

Performance Review

The Code recommends that an evaluation of the effectiveness of the Board and its Committees is conducted annually. The evaluation in 2007 was independently facilitated by Egon Zehnder International. All Directors were sent a questionnaire to complete and return to Egon Zehnder International and these were discussed in individual interviews, which included peer review. The following actions were agreed for 2008:

- minor enhancements around the form and content of Board papers and presentations; and
- refining the Board calendar of business.

The 2008 evaluation was again independently facilitated by Egon Zehnder International and took the form of detailed questionnaires, which were completed by each Director, individual interviews and peer evaluation of fellow Directors. As in previous years, the evaluation covered the following areas:

- Group performance;
- Strategy and performance objectives;
- Reporting to shareholders/stakeholders;
- Structure, people, succession planning and remuneration;
- Decision-making process;
- Information flows;
- Board structure and composition;
- Board roles and responsibilities;
- Board and Management relationships;
- Board meetings; and
- Board Committees.

The results of the evaluation were presented to the Board in December 2008. The results from the overall review showed a continuation of the five-year trend of improving scores and the Board concluded that the Board and the principal Board Committees continue to operate effectively in terms of communication, information flows and Directors' participation and engagement, particularly during the period of difficult market conditions in 2008. The Directors recognised however, and were disappointed, that Group performance has not met shareholder

expectations and acknowledged that they are accountable to shareholders for their stewardship of the Group during the exceptional events of 2008.

From the results of the 2008 evaluation, action points and issues that were discussed included:

- continued focus on the Board's calendar of business to ensure that non-critical items are removed or kept to a minimum, thereby ensuring that sufficient time can be allocated to items fundamental to the success of the Group;
- refinements to the Board's calendar of business, including additional time to be spent on items such as compensation strategy and succession planning;
- the overall size and composition of the Board; and
- refinements to the process for evaluating the performance of individual Directors.

The Board Corporate Governance and Nominations Committee has agreed an action plan to progress improvements in 2009.

In terms of individual Director performance, the Group Chairman held private meetings with non-executive Directors in early 2009 so that individual and general results could be discussed. Development plans relating to their own individual performance were agreed. The Senior Independent Director met privately with the other non-executive Directors and the Group Chief Executive to discuss feedback he received on the Group Chairman's performance. These results were then shared with the Group Chairman.

Director Development and Business Awareness

A comprehensive development and awareness programme is in place for Directors. This comprises:

- an induction programme, when they join the Board;
- briefings on the business of Barclays; and
- briefings on external technical matters.

Induction

All new Directors receive an induction presentation, which explains their responsibilities as a Director of a global, listed company and provides an overview of the Group and its businesses. An information pack, that gives details of the disclosures that Directors are obliged to make to the Company to comply with various laws and regulations, is also provided to each new Director. A personal induction programme is scheduled with each new Director so that they can further acquaint themselves with the Group and its businesses. Each new Director attends sessions with each of the executive Directors and the heads of the main Group functions, which includes opportunities to visit operational sites to meet with senior management and employees. The second part of their induction programme includes additional sessions with the executive Directors and senior managers from each of the Group's main business units to provide the new Director with detailed and in-depth understanding of those businesses. The sessions focus on the challenges, opportunities and risks that are faced by each business unit. Sir Michael Rake and Patience Wheatcroft undertook their induction programmes during 2008.

In 2008, non-executive Directors were asked to complete a questionnaire and give feedback on topics on which they would like to receive additional briefings. Two in-depth briefing sessions were arranged during 2008 on impairment recognition and forecasting and on Barclays Capital's traded products, including asset-backed securities, credit default swaps and collateralised debt obligations.

The Board and the Board Audit and Board Risk Committees received further briefings to ensure they were kept up to date with the changing global economic conditions, including updates on capital management, presentations on asset-backed securities and liquidity risk, mark-to-market valuations and briefing material to support the various capital raising proposals and acquisition of the Lehman Brothers North American businesses.

Barclays businesses and operations

During 2008, one Board meeting was held off-site. The Board met in China in September and received presentations on the economic and political outlook in China and met key Barclays staff working in the Asia-Pacific region.

Group Chief Executive, John Varley, helped to launch UK National Branch Week by visiting the Coventry High Street branch. During the course of the week, around 400 senior executives from the Group went back to the floor to experience first hand the successes and challenges colleagues in the branches are facing. Each day had a theme including raising the profile of Barclays product range, employee benefits, the importance of customer service, personal development and charity fundraising. A number of Directors participated and worked alongside cashiers, personal bankers and co-ordinators for the day.

John Varley also spent time giving presentations to colleagues on the Group's capital raising proposals. He kept colleagues up to date on how market conditions were affecting Barclays and the decisions the Board was taking in respect of the capital raising options that were available. All colleagues were invited to attend the presentations in person or via conference call and John Varley answered questions raised by colleagues from around the world.

External matters

Directors are regularly briefed on market opinion and receive copies of analyst research and press commentary. Further briefing material on market conditions was sent to Directors during 2008 and Directors continue to receive relevant publications to keep them up to date with changing market opinion. Directors are invited to attend results presentations to meet with analysts and investors to enhance their awareness of market sentiment.

Statement on US Corporate Governance Standards

The statement required by NYSE is set out below.

Director independence

NYSE Rules require the majority of the Board to be independent. The Code requires at least half of the Board (excluding the Chairman) to be independent. The NYSE Rules contain detailed tests for determining whether a Director is independent, whereas the Code requires the Board to determine whether each Director is independent in character and judgement and sets out criteria that may be relevant to that determination. We follow the Code's recommendations as well as developing best practices among other UK public companies. The independence of our non-executive Directors is reviewed by the Board on an annual basis and it takes into account the guidance in the Code and the criteria we have established for determining independence, which are described on pages 161 and 162.

Board Committees

We have a Board Corporate Governance and Nominations Committee and a Board HR and Remuneration (rather than Compensation) Committee, both of which are broadly similar in purpose and constitution to the Committees required by the NYSE Rules and whose terms of reference comply with the Code's requirements. As the Group Chairman was independent on appointment, the Code permits him to chair the Board Corporate Governance and Nominations Committee and be a member of the Board HR and Remuneration Committee. Except for these appointments, both Committees are composed solely of non-executive Directors, whom the Board has determined to be independent. We follow the Code recommendation that a majority of the Nominations Committee should be independent non-executive Directors, whereas the NYSE Rules state that the Committee must be composed entirely of independent Directors. We comply with the NYSE Rules regarding the obligation to have a Board Audit Committee that meets the requirements of Rule 10A-3 of the US Securities Exchange Act, including the requirements relating to the independence of Committee members. In April 2008, we made an Annual Written Affirmation of our compliance with these requirements to the NYSE. The Code also requires us to have a Board Audit Committee comprised solely of independent non-executive Directors. However, we follow the Code recommendations, rather than the NYSE Rules regarding the responsibilities of the Board Audit Committee, although both are broadly comparable. We also have a Board Risk Committee, comprised of independent non-executive Directors, which considers and discusses policies with respect to risk assessment and risk management.

Corporate Governance Guidelines

The NYSE Rules require domestic US companies to adopt and disclose corporate governance guidelines. There is no equivalent recommendation in the Code but the Board Corporate Governance and Nominations Committee

has developed corporate governance guidelines, 'Corporate Governance in Barclays', which have been approved and adopted by the Board.

Code of Ethics

The NYSE Rules require that domestic US companies adopt and disclose a code of business conduct and ethics for Directors, officers and employees. Rather than a single consolidated code as envisaged in the NYSE Rules, we have a number of 'values based' business conduct and ethics policies which apply to all employees. In addition, we have adopted a Code of Ethics for the Group Chief Executive and senior financial officers as required by the US Securities and Exchange Commission.

Shareholder approval of equity-compensation plans

The NYSE listing standards require that shareholders must be given the opportunity to vote on all equity-compensation plans and material revisions to those plans. We comply with UK requirements, which are similar to the NYSE standards. However, the Board does not explicitly take into consideration the NYSE's detailed definition of what are considered 'material revisions'.

Relations with Shareholders

Institutional investors

A key priority for the Board in 2008 was communicating with shareholders, particularly ahead of the General Meeting in November 2008, and also afterwards in order to provide further details to shareholders on the key decision points during the capital raising process. In the normal course of events, the Board aims to keep shareholders up to date and informed about how the Company is performing and its strategy, whilst ensuring that it listens to the opinions of major shareholders and takes their views on board. Executive Directors and senior executives hold group and one to one meetings with major investors to ensure we are communicating effectively. Analyst research notes are distributed to Directors and our corporate brokers provide regular feedback to the Board. The Investor Relations team organise roadshows, seminars, conferences, presentations and other activities that enable the Directors to interact with investors. The Group Chairman, Senior Independent Director and Company Secretary conduct a series of meetings with the corporate governance representatives of our major institutional shareholders ahead of each AGM. Meetings were held with our major institutional shareholders to discuss the capital raising proposals.

Private shareholders

The Board has also tried to keep private shareholders up to date with information about the capital raising proposals during 2008. In June 2008, the Group Chairman sent a letter to shareholders regarding the Open Offer, which took place in July. Personalised forms were also sent to shareholders with a question and answer booklet to help explain the details of the Open Offer and how to complete the forms. Further documents were available on the Group's website and sent to shareholders on request. In November, the Group Chairman sent a letter to shareholders and Notice of General Meeting, which set out the details of the Capital Raising that required shareholder approval. A follow-up letter was also sent to shareholders to inform them of developments and to advise shareholders that all Directors would offer themselves for re-election at the 2009 AGM and that the executive Directors had all agreed to waive their bonus for 2008. An open letter to shareholders, clients, customers and colleagues from the Group Chairman and Group Chief Executive was released to the London Stock Exchange on 26th January 2009 ahead of the publication of the annual results announcement on 9th February 2009.

The change in the law that allows us to communicate electronically with shareholders has enabled us to use less paper, which benefits the environment and lowers distribution costs for the Group. All shareholder documents are available electronically as soon as they are published but shareholders can still receive communications in paper format if they wish. This year we will continue to post the Annual Review, Notice of Meeting and proxy forms to all shareholders.

We encourage shareholders to hold their shares in Barclays Sharestore, where shares are held electronically in a cost-effective and secure environment. Shareholders can use our e-view service to receive their shareholder documents electronically and they can also use this service to get immediate access to information relating to their personal shareholding and dividend history. E-view participants can also change their details and dividend mandates online and receive dividend tax vouchers electronically.

Annual General Meeting/General Meeting

The 2008 AGM was held on 24th April 2008 at The Queen Elizabeth II Conference Centre in London. In accordance with best practice, all resolutions were considered on a poll and the results were made available on our website the same day. 52.9% of the shares in issue were voted and all resolutions were approved. All Directors are encouraged to attend the AGM and are available to answer shareholder questions. All Directors attended the 2008 AGM, with the exception of Dr Danie Cronjé, who was retiring from the Board on that day. A class meeting of ordinary shareholders was also held on 24th April 2008 for shareholders to consider the resolution of the AGM that created new preference share classes. 50.5% of the shares in issue were voted and the resolution was approved by shareholders.

A general meeting (GM) was held on 24th November 2008, at ExCel London, where shareholders were asked to approve resolutions in connection with the Capital Raising proposals. 60.8% of the shares in issue were voted on a poll and all resolutions were approved. The results of the poll were made available on our website on the same day. The Group Chairman, all of the executive Directors and four non-executive Directors, including the Senior Independent Director, Deputy Chairman and Board Audit Committee Chairman, attended the GM.

The 2009 AGM will be held on 23rd April 2009 at The Queen Elizabeth II Conference Centre in London. The Notice of Meeting is enclosed with this Annual Report as a separate document. The resolutions will be considered on a poll and the results will be available on our website on 23rd April 2009.

Signed on behalf of the Board

Marcus Agius
Group Chairman
5th March 2009

Statement from the Chairman of the Board HR and Remuneration Committee

Context

The disruption in the capital markets that commenced in 2007 deepened in 2008 resulting in one of the most challenging years ever for the global financial services sector. As 2008 closed it was clear that the depth of the financial crisis was so severe that a significant global economic downturn was unavoidable. The extent to which remuneration structures may have played a role in contributing to the financial crisis was still being debated and under scrutiny as this statement was written. Whatever outcomes prevail it is certain the remuneration structures will be different in the future.

As a consequence of events, the Committee commenced its deliberations for the 2008 performance year earlier than usual and met more times than is typical. The agenda rapidly developed into two work streams: first, the immediate decisions for 2008; and, second, the long-term shape of remuneration. Work continues on the latter and will extend into 2009. Our guiding principle throughout all decisions has been 'pay for performance'.

2008

The performance of Barclays during 2008 is described in detail in the Group Chief Executive's business review on pages 12 to 13. Barclays delivered profit of £6,077m, 14% lower than 2007. Although profitability, on an absolute and relative basis, compares favourably across the sector, several features of performance resulted in a more severe reduction in variable remuneration:

1. The significant under performance of the share price and the absolute reduction in market capitalisation (£20bn in 2008)
2. The decision not to pay a final dividend for 2008
3. The significantly lower absolute performance and weaker earnings in Barclays Capital

The variable pay for the Group reduced 48% relative to 2007. Accountability rests at the most senior levels and key factors relating to executive Directors include:

- zero annual performance bonus for 2008
- no salary increases for 2009
- executive Directors who have long-term performance shares due to be released in 2009 shall agree that these be deferred for a further two years and subject to additional financial performance over that period.
- the total 2009 long-term awards are 64% lower than last year, with no awards for the Chief Executive and President.

An assessment of Barclays remuneration structures and how well the calibration had worked during this stressed period shows significant alignment with shareholders:

- the existing long-term performance share plan award cycles (2007/09 and 2008/10) are not expected to vest
- the cumulative effect of delivering significant proportions of remuneration in Barclays shares (which are typically held on a long-term basis) has resulted in the executive Directors' share interests decreasing in value by an aggregate of £63m in 2008, which when added to the decrease of £32m in 2007 totals £95m for the two year period
- the value of employee interests in shares under Barclays employee share plans has decreased over 2007 and 2008 by approximately £2bn.

Future of Remuneration

The Committee commenced a review of remuneration during 2008. The objective of the review was to assess how the pay for performance culture and alignment with shareholders could be strengthened further. As the review advanced it became clear that the mandate ought to be extended to incorporate a broader industry wide review of remuneration. So far the Committee has:

- revised the remuneration policy (see page 172) to accentuate risk management and the role of behaviours in the determination of remuneration
- increased the shareholding requirements for executive Directors (from 1x to the higher of 2x times base salary or average total annual cash compensation over the prior three years)
- announced a new plan in the first quarter of 2009 for approximately 15,000 employees to significantly increase the proportion of remuneration paid over multiple years.

The review is continuing and will address detailed remuneration plans and proposals which will be developed during 2009. The challenge for the industry is to use this period to develop robust remuneration structures that balance commercial enterprise with risk in the interests of all stakeholders.

Barclays will be engaged in extensive dialogue and consultation with shareholders in developing its new proposals. An update on progress will be provided at the AGM.

Report

The following report of the Committee provides further explanation of the current remuneration governance and arrangements for executive Directors and is divided into the following sections:

- Committee remit, members and advisers
- Remuneration policy and governance
- Executive Directors' remuneration
- Non-executive Directors' remuneration
- Former Directors' remuneration
- Share plan descriptions

The Committee unanimously recommends that you vote at the 2009 AGM to approve the Remuneration Report as all Directors will be doing with their own Barclays shares.

On behalf of the Board

Sir Richard Broadbent
Chairman, Board HR and Remuneration Committee
5th March 2009

Remuneration Report

Board HR and Remuneration Committee remit and membership

The Committee provides governance and strategic oversight of executive and all other employee remuneration, Barclays Human Resource activities and senior management development. The Committee's terms of reference are available in the Corporate Governance section of the website <http://www.aboutbarclays.com>. The Committee met formally five times during 2008. After each formal meeting the Chairman of the Committee presented a report to the full Board. A report on the Committee's activities is set out on page 167 as part of the Corporate Governance Report.

The members of the Committee, are Sir Richard Broadbent (Chairman), Marcus Agius (Group Chairman), Leigh Clifford and Sir John Sunderland.

The non-executive Directors who are Committee members are considered by the Board to be independent of management and free from any business or other relationship that could materially affect the exercise of their independent judgement.

Advisers

The Committee's work is supported by independent professional advice. The Committee reviews the appointment of advisers each year. Towers Perrin MGMC and Kepler Associates were both re-appointed by the Committee in 2008. Deloitte LLP also advised the Committee. Any potential conflicts of interest the advisers may have are disclosed to the Committee. In addition to advising the Committee, Towers Perrin MGMC provided remuneration benchmarking data and Deloitte LLP and its affiliates also provided remuneration benchmarking data, tax, regulatory, information technology risk, pensions, corporate finance and consulting services to the Barclays Group.

The Group Chief Executive, the Human Resources Director and, as necessary, members of the Executive Committee, also advise the Committee, supported by their teams. No employee of Barclays Group is permitted to participate in discussions or decisions of the Committee relating to their own remuneration.

Remuneration Policy

During the year the Committee revised the Barclays Remuneration Policy. The revised policy is to:

1. Attract and retain those people with the ability, experience and skill to deliver the strategy.
2. Create a direct and recognisable alignment between the rewards and risk exposure of shareholders and employees, particularly executive Directors and senior management.
3. Incentivise employees to deliver sustained performance consistent with strategic goals and appropriate risk management, and to reward success in this.
4. Deliver compensation that is affordable and appropriate in terms of value allocated to shareholders and employees.
5. Encourage behaviour consistent with the principles that guide Barclays business:

i) Winning together

– Doing what is right for Barclays, its teams and colleagues, to achieve collective and individual success.

ii) Best People

– Developing talented colleagues and differentiating compensation to reflect performance.

– Doing what is needed to ensure a leading position in the global financial services industry.

iii) Customer and Client Focus

– Understanding what customers and clients want and need and then serving them brilliantly.

Executive Directors' remuneration – alignment of interests with shareholders

Figure 1 shows the aggregate total direct remuneration of the executive Directors for 2007 and 2008 (as shown in Table 1) compared to the indicative fair value movements on the executive Directors' aggregate share based remuneration and beneficial interests in Barclays shares from 1st January 2007 to 31st December 2008 (as shown in Table 7). The performance of Barclays share price has been shown for context. The chart shows that the executive Directors' interests have decreased in value by £95m over 2007 and 2008 as a consequence of the movement in Barclays share price.

iv) Pioneering

- Driving new ideas, especially those that make Barclays profitable and improve control.
- Improving operational excellence.
- Adding diverse skills to stimulate new perspectives and bold steps.

v) Trusted

- Acting with the highest levels of integrity to retain the trust of customers, shareholders, other external stakeholders and colleagues.
- Taking full responsibility for decisions and actions.
- Reflecting the operation of independent, robust and evidence-based governance and control and complying with relevant legal and regulatory requirements.

The Committee keeps the remuneration policy and arrangements, as detailed in this Report, under review to ensure that Barclays programmes remain competitive and provide appropriate incentive for performance.

Remuneration Policy Governance

To ensure appropriate operation of the remuneration policy, the Committee has established frameworks for the governance of remuneration in the Global Retail and Commercial Banking and Investment Banking and Investment Management businesses and for the Group as a whole. These frameworks will be reviewed in 2009. The current frameworks set out key financial ratios

achieved by Barclays and its competitors and have been used by the Committee to inform its decision-making process when approving aggregate remuneration spend, including bonus and long-term incentive expenditure, strategic investment for new hires, and the remuneration arrangements of any employee with annual total remuneration equal to or in excess of £750,000.

For all individual remuneration decisions made by the Committee, including those for executive Directors, the Committee reviews each element of remuneration relative to performance and to the practice of other comparable organisations. Remuneration is benchmarked against the markets in which we compete for talent. This includes benchmarking against other leading international banks and financial services organisations, and other companies of similar size to Barclays in the FTSE 100 Index.

Given the materiality of Barclays pension arrangements, the Committee operates a specific framework for the management of pensions to ensure proper oversight. The Global Retirement Fund Governance Framework is operated to ensure best practice in respect of regulatory compliance, governance, investment and administration. Details of the pension arrangements in place for executive Directors are set out on page 178 and for other employees on page 234.

As required by Part 3 of Schedule 7A of the Companies Act 1985, the Group's auditors, PricewaterhouseCoopers LLP, have audited the information contained in Tables 1b, 3, 5, 10, 11, 14, 16, 18, 19, 20, 21, 22 and 23 on pages 176 to 182.

Total Shareholder Return

Figure 2 shows the value, at 31st December 2008, of £100 invested in Barclays on 31st December 2003 compared with the value of £100 invested in the FTSE 100 Index. The other points plotted are the values at intervening financial year ends. The FTSE 100 Index is a widely recognised performance comparison for large UK companies and this is why it has been chosen as a comparator to illustrate Barclays TSR. The graph shows that, at the end of 2008, a hypothetical £100 invested in Barclays on 31st December 2003 would have generated a total loss of £59, compared with a gain of £18 if invested in the FTSE 100 Index.

Fig 2: Total Shareholder Return £

Remuneration Report

Executive Directors' Pay

Table 1 explains the purpose of each element of remuneration and shows executive Directors' remuneration for 2008 and 2007.

Base Salaries

The executive Directors will receive no base salary increase in 2009.

Table 2: Base salary

	Base salary at 31st Dec 2008 £000	Base salary at 1st April 2009 £000	Date of previous increase
Executive Directors

Element	Purpose	Delivery	Programme summary	When normally received/awarded
Salary	To reflect the market value of the individual and their role	<ul style="list-style-type: none"> – Cash – Monthly – Pensionable 	<ul style="list-style-type: none"> – Reviewed annually, with any increases typically effective on 1st April 	Paid in year
Annual performance bonus (cash)	To incentivise the delivery of annual goals at the Group, business division and individual levels	<ul style="list-style-type: none"> – No more than 75% of annual performance bonus paid in cash – At least 25% recommended as deferred share awards under ESAS – Non-pensionable 	<ul style="list-style-type: none"> – Based on annual business unit performance, performance of the Group as a whole and individual contribution 	Normally paid in the following financial year
Total cash	Sub-total of the above			
Deferred share award (ESAS)	To align annual performance with shareholder value and increase retention	<ul style="list-style-type: none"> – At least 25% of annual performance bonus recommended as deferred share awards under ESAS – Non-pensionable 	<ul style="list-style-type: none"> – Discretionary awards of shares to be deferred for three to five years. No performance condition on release, as a deferred share award – 20% bonus shares releasable after three years, a further 10% after five years – Dividends normally accumulated during deferral period 	Normally awarded in the following financial year
Long-term incentive (PSP)	To reward the creation of above median, sustained growth in shareholder value and Economic Profit (EP) performance	<ul style="list-style-type: none"> – Annual awards of shares that vest after three years, subject to performance conditions – Non-pensionable 	<ul style="list-style-type: none"> – Discretionary awards – Participation reviewed annually – Barclays performance over three years determines the performance shares eligible for release to each individual 	Normally awarded in the following financial year
Total direct remuneration	Total of the above			
Pension (or cash allowance)	To provide a market competitive post-retirement benefit	<ul style="list-style-type: none"> – Deferred cash or cash allowance – Monthly 	<ul style="list-style-type: none"> – Non-contributory, defined benefit scheme and/or defined contribution scheme, or cash allowance in lieu of pension contributions 	Paid or accrued during year
Other benefits	To provide market competitive benefits	<ul style="list-style-type: none"> – Benefit in kind, or cash allowance – Non-pensionable 	<ul style="list-style-type: none"> – Benefits include private medical, insurance life and disability cover, accommodation overseas when required for business purposes, use of company owned vehicle or cash equivalent and tax advice 	Received during year
Sub-total in accordance with Companies Act 1985	Total of Salary, Annual Cash Bonus, Other Benefits and Pension Cash Allowance			

Annual Cash Bonus and Deferred Share Awards

No annual cash bonuses or deferred share awards have been awarded to executive Directors for 2008. The maximum bonus opportunity for executive Directors is normally 250%, but is tailored to the relevant market.

Long-term incentives

PSP Vesting in 2008

The PSP awards made in 2005, due for release in March 2008 lapsed in full as the performance condition was not met.

As disclosed in the 2007 Report and Accounts, in March 2008 Robert E Diamond Jr received a cash payment of £7.425m and an award of shares deferred for one year under ESAS of £7.425m, detailed on pages 176 to 177 from the Retained Incentive Opportunity 2005-2007 in which he participated.

PSP awards due to vest in 2009

For the PSP awards made in relation to the 2006-2008 cycle, the TSR condition was not met and the EP condition was partially met. As a result, awards that are scheduled to vest in March 2009 (at the absolute discretion of the PSP trustee) are due to vest at 1.475 times the initial award (maximum is 3 times). This represents approximately 9% of the maximum value of the number of shares that could vest at the share price at award.

After consultation with the Remuneration Committee, the executive Directors intend to write to the PSP trustee to request that it defers the exercise of its discretion to release shares to them under the 2006-2008 awards for a further two year period. At the end of that period it is intended that the PSP trustee considers the release of the shares, subject to continued employment and a financial performance condition to be agreed and assessed by the Committee.

The maximum number of shares releasable at the end of the two year period will be 1.475 times the initial award; there will be no opportunity to receive shares in excess of this number (except for any dividend shares that may be awarded at the PSP trustee's discretion).

Proposed awards in 2009

It is proposed that Chris Lucas and Frits Seegers are awarded a performance share plan award in 2009.

The number of shares awarded to date and the performance conditions relating to each award are set out on pages 176 and 177.

The PSP awards are shown in Table 1b at the fair value of the recommended awards.

Table 1b: Executive Directors' annual remuneration

Remuneration Report

Share Plans

Barclays operates a number of share plans to align the interests of executive Directors with shareholders. The following tables summarise the interests of each executive Director in each plan and the relevant performance conditions for outstanding PSP cycles. The interests shown are the maximum number of shares that may be received under each plan. Executive Directors do not pay for any share plan award.

During 2008, the number of shares under each award or option has been increased in accordance with the rules by 2.68% and option exercise prices per share have been correspondingly reduced to reflect the impact of the capital raising in July. No other adjustments were made for capital raisings during the year.

Summary descriptions of principal share plans operated by Barclays are shown on pages 183 to 186.

Table 3: Long-term plans and deferred share plans

	Number of shares under award/option 1st January 2008 (maximum)	Awarded in year (maximum)	Market price on award date	Adjusted weighted average exercise price	Number released/exercised
John Varley

ESAS	4,863,749	4,131,868	£4.25	–	(2,131,463)
Chris Lucas					
PSP 2007-2009	248,730	–	£7.08	–	–
PSP 2008-2010	–	527,472	£4.25	–	–
Sharesave	3,638	–	–	£4.70	–
ESAS	69,091	42,857	£4.25	–	(34,546)
Frits Seegers					
PSP 2006-2008	473,184	–	£6.30	–	–
PSP 2007-2009	409,278	–	£7.08	–	–
PSP 2008-2010	–	1,054,944	£4.25	–	–
Sharesave	3,390	–	–	£4.70	–
ESAS	231,383	125,000	£4.25	–	(80,221)

Numbers shown for ESAS above represent provisional allocations that have been awarded. Numbers shown as aggregate ESAS amounts also include shares under option as at 31st December 2008. Nil cost options are normally granted under mandatory ESAS awards at the third anniversary of grant and are exercisable (over initial allocation and two-thirds of bonus shares) typically for two years. The aggregate exercise price of a nil cost option is £1 (further detail is included on page 183). At the fifth anniversary of the provisional allocation

the nil cost options normally lapse and the shares under provisional allocation (including bonus shares) are released at the discretion of the ESAS trustee. In 2008, nil cost options were granted to Mr Varley over 91,213 shares. Nil cost options (granted in 2003) lapsed during the year. Mr Varley held 63,447 nil cost options under ESAS as at 1st January 2008, and 146,282 as at 31st December 2008. The first and last exercise dates were 13th March 2006 and 7th March 2010 respectively.

Table 4: Performance conditions attaching to the share plans in which the executive Directors participate

Scheme	Performance period	Performance measure	Target
PSP	2008-2010	50% of award calibrated against TSR	33% of maximum award released for above median performance (6th place) with 100% released in 1st place and a scaled basis in between
		50% of award calibrated against Cumulative EP over the three year performance period	33% of maximum award released for £6,921m scaled to 100% of maximum award at £8,350m
	2007-2009	50% of award calibrated against TSR	As above
		50% of award calibrated against Cumulative EP over the three year performance period	33% of maximum award released for £7,618m scaled to 100% of maximum award at £8,668m
	2006-2008	50% of award calibrated against TSR	As above
		50% of award calibrated against Cumulative EP over the three year performance period	33% of maximum award released for £5,661m scaled to 100% of maximum award at £7,073m
2005-2007	100% of award calibrated against TSR	As above	

For PSP, at the end of each performance period, independent confirmation is provided to the Committee of the extent to which each performance condition has been met. Relative Total Shareholder Return (TSR) and Cumulative Economic Profit (EP) were selected in 2005 as performance measures to support the Group's long-term goals.

All awards and releases are recommended by the Committee and are subject to trustee discretion.

The trustees may also release dividend shares to participants which represent accumulated dividends (net of withholding) in respect of shares under award.

During 2008 Barclays highest share price was £5.06 and the lowest was £1.27. The share price at year end was £1.53.

Cash released	Market price on release/exercise date	Number lapsed in 2008	Adjustment due to open offer	Adjusted number of shares under award/option at 31st December 2008 (maximum)	Vested number of shares under option	Value of release/exercise	End of three year PSP performance period, or first exercise/scheduled release date	Last exercise/scheduled release date

Mr Diamond's Retained Incentive Opportunity (RIO) reached the end of its performance period on 31st December 2007. Vesting was based on Barclays Capital's cumulative EP over the three-year performance period (which exceeded the £2bn threshold at which the maximum potential value would vest). This value of the RIO award was awarded 50% in cash and 50% in shares, deferred for one year under ESAS. The ESAS number shown as awarded in the year to

Mr Diamond includes the deferred share element of his Retained Incentive Opportunity (1,631,868 shares). No bonus shares are attributable to this award. The cash release made in the year is also shown in the table above.

Mr Varley and Mr Diamond received 6,047 and 172,264 dividend shares respectively from the ESAS released during the year (share price on release date was £4.56).

Pensions

Chris Lucas and Frits Seegers receive a cash allowance of 25% of salary in lieu of joining a Group pension scheme.

John Varley is a member of the Group's closed UK defined benefit pension scheme. This non-contributory arrangement provides a pension benefit of two thirds of his pensionable salary at the normal retirement age of 60. Should he retire at 55, an unreduced pension of 60% of pensionable salary would be provided. There were no changes to the pension arrangements for Mr Varley during the year. His increase in pension of £83,000 during the year relates to accrual under the scheme. The scheme also provides, whilst in employment, a death in service dependant's pension of 50% of the pension that would have been payable if employment had continued until normal pension age. Mr Varley also has a defined contribution benefit of £549,816 as at 31st December 2008 in respect of a previous transfer from a freestanding AVC.

Robert E Diamond Jr participates in the Group's US non-contributory defined benefit arrangements which provide a benefit at age 65 of 1/60th of final average pensionable pay for each year of service up to a maximum of 30 years. In line with current market practice, final average pensionable pay includes salary and an element of bonus up to a current combined maximum of US\$350,000. The benefits are provided through the US defined benefit plan (a funded arrangement), and the US Restoration Plan (an unfunded arrangement). The scheme also provides a death in service spouse's pension of approximately 50% of the pension that would have been payable had early retirement occurred on the date of death.

Mr Diamond also participates in the Barclays Bank PLC 401K Thrift Savings Plan and Thrift Restoration Plan, which are both defined contribution plans. The company contributions in 2008 amounted to £11,745 (US\$21,859).

Table 5 sets out the pension benefits of the executive Directors.

Pension accrued during the year represents the change in accrued pension during the year (including inflation at the prescribed rate of

5% (UK)). Pensions paid from the UK final salary section of the applicable fund are reviewed annually and increase by a minimum of the increase in the retail prices index (capped at 5%), subject to the scheme rules.

The transfer values have been calculated in a manner consistent with the Retirement Benefit Scheme – Transfer Values (GN11) published by the Institute of Actuaries, and the Faculty of Actuaries. During 2008, the independent UK Retirement Fund Trustee changed the transfer value basis for all members. The change reflected different mortality assumptions and a lower discount rate. This contributed £1.4m of the increase in transfer value of John Varley's pension during the year.

Other benefits

Executive Directors are provided with benefits including private medical insurance, life and disability cover, the use of a company-owned vehicle or the cash equivalent, tax advice and accommodation overseas when required for business purposes. These benefits are available on similar terms to each executive Director. No Director has an expense allowance.

Shareholding guideline

The Committee guideline that executive Directors should hold, as a minimum, the equivalent of one times their base salary in Barclays shares, including shares awarded under ESAS, was met by all executive Directors at 31st December 2007. During the year the Committee increased this guideline to the higher of two times salary or one-third of total remuneration for the last three years. Executive Directors have five years from their appointment to meet this guideline and a reasonable period to build up to the guideline again, if it is not met because of a share price fall. Table 6 shows the executive Directors' shareholdings. Table 7 shows the indicative change in value of the executive Directors' total share interests during 2008.

Table 5: Pension provision

	Age at 31st December 2008	Completed years of service	Accrued pension at 31st December 2007 £000	Pension accrued during 2008 (including increase for inflation) £000	Pension accrued during 2008 (excluding inflation) £000	Accrued pension at 31st December 2008 £000	Transfer value of accrued pension at 31st December 2007 £000	Transfer value of accrued pension at 31st December 2008 £000	Increase in transfer value during the year £000	Annual cash in lieu of pension £000
John Varley	52	26	489	83	59	572	9,463	12,328	2,865	–
Robert E Diamond Jr	57	12	38	7	5	45	214	280	66	–
Chris Lucas	48	1	–	–	–	–	–	–	–	159
Frits Seegers	50	2	–	–	–	–	–	–	–	175

Table 6: Interests in shares of Barclays PLC at 31st December 2008

	At 1st January 2008		At 31st December 2008	
	Beneficial	Non-beneficial	Beneficial	Non-beneficial
Executive Directors				
John Varley	470,650	–	593,266	–
Robert E Diamond Jr	3,402,192	–	5,866,965	–
Chris Lucas	38,003	–	76,038	–
Frits Seegers	699,870	–	897,747	–

Beneficial interests include shares held either directly, or through a nominee, their spouse, and children under 18. They include any interests held through Sharepurchase. Non-beneficial interests include any interests in shares where the executive Director holds the legal, but not beneficial interest. In addition to the shares above Mr Diamond also holds 200,000 shares in Barclays Global Investors UK Holdings Limited. Mr Seegers has granted a third party bank security over 896,346 of the ordinary shares he holds. Mr Seegers retains beneficial ownership of these shares. He also holds 1,000 ordinary shares in Absa Group Limited. Note 45 provides further information on Directors and officers shareholdings. There were no changes to the interests of executive Directors in shares of Barclays PLC in the period 31st December 2008 to 27th February 2009.

Table 7: Indicative change in value of executive Director total share interests

	Indicative value at 1st January 2008 £m	Change in holdings £m	Indicative value at 31st December 2008 £m	Indicative decrease on total share interest 2008 £m
	Executive Directors			
John Varley	7.1	1.4	2.5	(6.0)
Robert E Diamond Jr	50.9	22.3	23.5	(49.7)
Chris Lucas	1.0	1.0	0.7	(1.3)
Frits Seegers	6.2	2.6	2.8	(6.0)

Share interests are beneficial interests plus share plan interests including any initial or provisional allocations and vested awards under ESAS, PSP, ISOP, ESOS and Sharesave.

Performance Linked Remuneration

Each element of remuneration is important and has a specific role in achieving the aims of the remuneration policy. The combined potential remuneration from annual performance bonus and PSP outweighs the other elements, and is subject to personal and Group performance, thereby placing the majority of potential remuneration at risk.

Table 8 shows the average proportions of fixed and variable pay over the last three years.

Table 8: Variable remuneration average over the last three years (or since joining)

	Variable		
	Fixed	Cash	Shares
Executive Directors			
John Varley	57%	19%	24%
Robert E Diamond Jr	2%	39%	59%
Chris Lucas	38%	12%	49%
Frits Seegers	22%	25%	53%

Service Contracts

The Group has service contracts with its executive Directors which do not have a fixed term but provide for a notice period from the Group of 12 months and normally for retirement at age 65. Executive Directors' contracts allow for termination with contractual notice from the Group or, in the alternative, termination by way of payment in lieu of notice (in phased instalments) which are subject to contractual mitigation. In the event of gross misconduct, neither notice nor a payment in lieu of notice will be given.

The Committee's approach when considering payments in the event of termination is to take account of the individual circumstances including the reason for termination, contractual obligations and share and pension plan rules.

All executive Directors are standing for re-election at the 2009 AGM – see page 155.

Other Directorships

The executive Directors hold directorships in the organisations and receive the fees shown in Table 10.

Table 9: Contract terms

	Effective date of contract	Notice period from the Company	Potential compensation for loss of office
Executive Directors			
John Varley	1st September 2004	12 months	12 months base salary, bonus and continuation of medical and pension benefits whilst an employee

Chris Lucas	–	–	–	–	–

Remuneration Report

Group Chairman, Deputy Chairman and non-executive Directors

The Group Chairman, Deputy Chairman and non-executive Directors receive fees which reflect the individual responsibilities and membership of Board Committees. Fees are reviewed each year by the Board. Fees were last increased in June 2008.

The first £20,000 of each non-executive Director's base fee and the Deputy Chairman's fee is used to purchase Barclays shares. These shares, together with reinvested dividends, are retained on behalf of the non-executive Directors until they retire from the Board.

Marcus Agius, Group Chairman, has a minimum time commitment to Barclays of the equivalent to 60% of a full-time role and he receives private health insurance in addition to his fees. Marcus Agius is not eligible to participate in Barclays bonus and share incentive plans nor will he participate in Barclays pension plans or receive any pension contributions.

No other non-executive Director receives any benefits from Barclays.

Details of the remuneration received by the non-executive Directors during the year and their beneficial interests in Barclays PLC shares are set out in tables 11 and 12.

Letters of Appointment

The Group Chairman, Deputy Chairman and non-executive Directors have individual letters of appointment. Each appointment is for an initial six-year term, renewable for a single term of three years thereafter. Sir Nigel Rudd's re-appointment as Deputy Chairman has been approved annually by shareholders.

All non-executive Directors, except Sir Nigel Rudd DL and Professor Dame Sandra Dawson, are standing for re-election at the 2009 AGM – see page 155.

Former Directors

Gary Hoffman and Dr Danie Cronjé ceased to be Directors during the year.

Mr Hoffman resigned as a Director on 23rd July 2008 and ceased to be an executive Director on 31st August 2008. His employment ceased on 30th September 2008. On cessation of his directorship and employment, Mr Hoffman received no termination payments and it was mutually agreed that his full notice period would be waived without payment in lieu, to allow him to take up his appointment at Northern Rock. Dr Cronjé did not put himself forward for re-election at the 2008 AGM and received no termination payments. Their remuneration received during the year was as follows:

Table 14: Annual remuneration

	Received for 2008					Total 2008 £000	Total 2007 £000
	Salary and fees £000	Annual cash bonus £000	Deferred share award (ESAS) £000	Long term incentive (PSP) £000	Benefits £000		
Gary Hoffman	417	298	–	–	9	724	1,146
Dr Danie Cronjé	25	–	–	–	–	25	217

Mr Hoffman received his normal monthly salary benefits and pro-rated annual cash bonus, total of £90,477 for the period between the cessation of his directorship and 30th September 2008.

The former Directors' beneficial shareholdings were as follows:

Table 15: Shareholdings at date of cessation as Director

	At 1st January 2008 total beneficial holdings	At date of cessation as Director total beneficial holdings
Gary Hoffman	431,761	542,979
Dr Danie Cronjé	5,146	6,416

Dr Cronjé also held 11,700 preference shares in Absa Bank Limited and 101,577 ordinary shares in Absa Bank Limited at 31st January 2008 and 24th April 2008.

Mr Hoffman participates in the UK closed defined benefit pension scheme providing a pension at the normal retirement age of 60 at an accrual rate of 1/60th of pensionable salary for each year of pensionable service.

Table 16: Pension provision

	Age at 31st August 2008	Completed years of service	Accrued pension at 31st December 2007 £000	Pension accrued during 2008 (including increase for inflation) £000	Pension accrued during 2008 (excluding inflation) £000	Accrued pension at 31st August 2008 £000	Transfer value of accrued pension at 31st December 2007 £000	Transfer value of accrued pension at 31st August 2008 £000	Increase in transfer value during the year £000
Gary Hoffman	47	25	273	(1)	(15)	272	2,598	2,824	226

In addition to the value of the accrued pension at 31st August 2008, Mr Hoffman also had defined contribution benefits in respect of Special Company Contributions (bonus sacrifice). The fund value of this arrangement was £626,412 as at 31st August 2008. The scheme also provided, whilst in employment, a death in service dependant's pension of 50% of the pension that would have been payable if employment had continued until normal pension age.

The terms of Mr Hoffman's contract and Dr Cronjé's letter of appointment were:

Table 17: Terms of contract or letter of appointment

	Effective date	Notice period from the Company	Potential compensation for loss of office
Gary Hoffman	1st January 2004	12 months	12 months base salary, bonus equivalent to the average of the previous three years up to 100% of base salary, and continuation of medical and pension benefits whilst an employee
Dr Danie Cronjé	1st September 2005	6 months	6 months fees

Mr Hoffman's other Directorships and fees retained were:

Table 18: Other Directorships held by Gary Hoffman

Organisation	2008		2007	
	Fees £000	Fees retained £000	Fees £000	Fees retained £000
Visa (Europe) Limited	£0	£0	£0	£0
Trinity Mirror plc	£46,666	£46,666	£62,754	£62,754
Barclays Pension Fund Trustees Limited	£12,500	£12,500	–	–

Mr Hoffman was retained as a Director of Barclays Pension Fund Trustees Limited following cessation of his employment on 30th September 2008. The fees disclosed represent those paid to him for the remainder of 2008.

Share and Long Term Incentive Plans

Barclays operates a number of Group-wide plans. Summaries of the principal plans are set out below. Barclays has a number of employee benefit trusts which operate with these plans. In some cases, the trustees grant awards and purchase shares in the market to satisfy awards as required, in others, new issue or treasury shares may be used to satisfy awards where the appropriate shareholder approval has been obtained. The number of shares held by the trustees is set out in Note 32 on page 243. The limits on the issue of new shares comply with the guidelines issued by the Association of British Insurers.

Table 24: Plans under which awards made in 2008

Plan name	Executive Directors Eligible?	Description
Performance Share Plan (PSP)	Yes	<ul style="list-style-type: none"> – PSP is a performance related share plan under which awards of Barclays shares may be made to selected employees (including executive Directors), subject to trustee discretion. – The PSP trustee may select any employee of the Group to participate in the plan. – Awards are granted by the PSP trustee, in consultation with the Remuneration Committee and are communicated as provisional allocations to participants. No right to the shares arises until the PSP trustee releases the shares. – Participants do not pay for a grant or release of an award. – Awards are normally releasable on or after the third anniversary of grant, to the extent that applicable performance conditions are satisfied, subject to trustee discretion. – Any awards released may also include an additional number of shares equivalent to any dividends that would have been paid on the shares between the date of grant and release. – Normally, the maximum expected value of an award made to an employee at the date of grant is the higher of 150% of base salary, or 75% of base salary and target bonus. Maximum awards reflect the relevant market for each executive Director. Awards are communicated on grant as an expected value, this is a single value for the award at grant, which takes into account the sum of the various possible performance and vesting outcomes. – On cessation of employment, eligible leavers (as defined) normally receive an award pro rated for time and performance subject to trustee discretion. For other leavers, awards will normally lapse. – On a change of control awards may vest at the PSP trustee's discretion and may be pro rated for time and performance to the date of change of control. – PSP is not an HMRC approved plan. – The plan was approved for a ten year period by shareholders in April 2005.
Executive Share Award Scheme (ESAS)	Yes	<ul style="list-style-type: none"> – ESAS is a deferred share award plan operated in conjunction with various Barclays Group bonus plans for selected employees (including executive Directors), subject to trustee discretion. – Awards are granted by the ESAS trustee having first consulted with the Remuneration Committee. – For certain eligible employees a proportion of discretionary annual bonus is delivered in cash and a proportion is as a recommended mandatory provisional allocation of Barclays shares under ESAS. Normally, for executive Directors, a minimum of 25% of bonus is delivered as a recommended mandatory award under ESAS with 75% delivered as cash. – The mandatory provisional allocation will normally include bonus shares equal to 30% of the value of the deferred bonus amount awarded in shares. Bonus shares are awarded to recognise the interest that a participant forgoes on the deferred part of the discretionary bonus. – Under mandatory ESAS awards, nil cost options are typically granted three years from award, subject to the discretion of the ESAS trustee. Participants may then call for the shares plus two thirds of the bonus shares and any associated dividend shares. If the nil cost option is not exercised by the end of the two year period, the ESAS trustee may release all shares, bonus shares and any dividend shares to the participant. – In addition to mandatory ESAS, participants may also request to waive any bonus (or part of a bonus) to which they may become entitled and request that a voluntary ESAS award be made to them in the form of a nil cost option. Voluntary ESAS awards are typically fully exercisable after five years, and include bonus shares equal to 30% of the waived bonus amount. Dividend shares may be awarded, as per mandatory ESAS awards. – On cessation of employment, a participant may forfeit an award depending on the reason for leaving. Special provisions apply on a change of control. – ESAS is also used to make certain awards to facilitate the retention and recruitment of new joiners to the Group who have forfeited share awards on leaving previous employment. Typically bonus shares are not awarded, though dividend shares may be awarded, as per mandatory ESAS awards. – ESAS is not an HMRC approved plan.
Incentive shares	No	<ul style="list-style-type: none"> – Incentive shares are discretionary share awards that may be made to selected employees (excluding executive Directors), subject to trustee discretion. – Shares are normally released after three years, subject to continued employment and the discretion of the trustee. Dividends received are normally awarded as additional shares and released at the same time. – On cessation of employment eligible leavers (as defined) normally receive an award pro rated for time in employment, subject to the discretion of the trustee; for other leavers, awards will normally lapse. – On a change of control awards may vest, pro rated for time to the date of change of control, subject to the discretion of the trustee. – Incentive shares is not an HMRC approved plan.

Share and Long Term Incentive Plans (continued)

Table 24: Plans under which awards made in 2008 (continued)

Plan name	Executive Directors Eligible?	Description
Sharesave	Yes	<ul style="list-style-type: none"> – Sharesave is a share option plan under which all eligible employees in the UK, Ireland and Spain (including executive Directors) are invited to participate. It is HMRC approved in the UK and approved by the Revenue Commissioners in Ireland. – Participants are granted options over Barclays shares which may be at a discount to the market value at the date of award (currently 20%). – At the expiry of a fixed term (three, five or seven years) participants may use savings to acquire the shares by exercising their option within 6 months of the date of vesting. Participants may save up to £250 per month (€500 in Ireland, €135 in Spain) for this purpose. – On cessation of employment eligible leavers (as defined) may exercise their option to acquire shares to the extent of their savings for a period of 6 months. – On a change of control, participants may be able to exercise their options to acquire shares to the extent of their savings for a period of 6 months (or a shorter period in certain circumstances). – The plan was approved for a ten year period by shareholders in April 2000.
Sharepurchase	Yes	<ul style="list-style-type: none"> – Sharepurchase is an HMRC approved share incentive plan under which all employees in the UK (including executive Directors) are invited to participate. – Participants may purchase up to £1,500 shares each tax year. To encourage employee share ownership, Barclays matches the first £600 of shares purchased by participants on a one-for-one basis. Dividends are also earned in the form of additional shares. – Purchased shares may be withdrawn from the plan any time. Matching and dividend shares must be held in trust for three years before release, but may be kept in trust for five years. – On cessation of employment participants must withdraw all shares and depending on the reason for and timing of cessation, the matching shares may be forfeited. – On a change of control, participants are able to instruct the Sharepurchase trustee how to act or vote on their behalf. – The plan was approved for a ten year period by shareholders in April 2000.

Table 25: New Plans under which awards are to be made 2009

Plan name	Executive Directors Eligible?	Description
BGI Equity Participation Plan	No	<ul style="list-style-type: none"> – The BGI Equity Participation Plan is a share plan under which awards linked to the value of BGI shares may be made to selected BGI employees (excluding executive Directors) in the form of either stock appreciation rights settled in shares or restricted share awards. – Awards normally vest in three equal tranches following the first, second and third anniversary of grant provided there has been no significant deterioration in the performance of Barclays, with delivery in Barclays shares. – On cessation of employment awards normally vest for eligible leavers (as defined) provided there has been no significant deterioration in the performance of Barclays; for other leavers, awards will normally lapse. – On a change of control awards may vest provided there has been no significant deterioration in the performance of Barclays.
Long Term Cash Plan (LTCP)	No	<ul style="list-style-type: none"> – The LTCP is a new forward looking plan introduced initially for 2009, under which conditional awards of cash are made to eligible employees, (excluding executive Directors). – Awards are released in portions over a period of time (two years for 2009 awards), subject to continued employment. At the time of the final release, for 2009 awards, a service credit (10% of the initial value of the award) is added. – Participants must normally be in employment at the time of release in order to receive each portion of the payment. – Participants who leave employment before the release date of any portion of the award will normally forfeit any outstanding amounts. For categories of eligible leavers an award will vest, pro rated for time in service. – On a change of control awards may vest at the discretion of the Committee.

Share and Long Term Incentive Plans (continued)

Table 26: Plans under which awards not made in 2008

Plan name	Executive Directors Eligible?	Description												
ISOP (Incentive Share Option Plan)	Yes	<ul style="list-style-type: none"> – The Incentive Share Option Plan is a share option plan under which share options were granted to selected employees (including executive Directors). No options have been granted since 2004. – ISOP contains HMRC approved and unapproved parts. – Options were awarded at the market price at the date of grant calculated in accordance with the rules of the plan. – Options granted had an EP threshold and a TSR performance condition associated with them. Options were normally exercisable between three and ten years of the grant date. – All options granted which met these performance criteria have now vested and are exercisable. – On cessation of employment eligible leavers (as defined) normally are able to exercise their options; for other leavers, options normally lapse. – On a change of control options would remain exercisable for a specified period. – The plan was approved for a ten year period by shareholders in April 2000. 												
ESOS (Executive Share Option Scheme)	n/a	<ul style="list-style-type: none"> – The Executive Share Option Scheme is a share option plan under which share options were granted to selected employees (including executive Directors). No options have been granted since 2000. – Options were awarded at the market price at the date of grant calculated in accordance with the rules of the plan. – Options were normally exercisable between three and ten years of the grant date. All options are now vested. – On cessation of employment eligible leavers (as defined) normally are able to exercise their option pro-rated for performance; for other leavers, options normally lapse. – On a change of control options remain exercisable for a specified period. – The plan was adopted for a ten year period by shareholders in 1990. 												
BGI EOP (BGI Equity Ownership Plan)	No	<ul style="list-style-type: none"> – BGI is Barclays asset management business headquartered in San Francisco. The BGI Equity Ownership Plan (BGI EOP) was approved by shareholders at Barclays 2000 AGM to provide the employee share incentive arrangements required to recruit and retain the quality of senior management and investment talent appropriate for building a global investment management business. – The BGI EOP was designed to provide participants with a long-term equity interest in BGI to meet the expectations of, in particular, BGI's key investment talent in the United States, who could expect to participate in the equity of their employer. Under the terms of the BGI EOP, options were granted at fair value to key BGI employees over shares in Barclays Global Investors UK Holdings Limited (BGI Holdings) within an overall cap of 20% of the issued ordinary share capital of BGI Holdings. – No options were granted under the BGI EOP in 2008 and no further options will be granted. The plan will not be renewed in 2010 when it comes to the end of its life. – All grants of options were approved by the Committee. The Committee is also advised of option exercises and share sales by employees. Employees who were executive Directors of Barclays PLC at the date of grant were not eligible to receive options under the BGI EOP. – In summary the BGI EOP operated as follows: <ul style="list-style-type: none"> – certain key BGI employees were granted options over shares in BGI Holdings; – the option exercise price was based on the fair value of a BGI Holdings share at the date of grant determined by an independent appraiser; – the options generally vest evenly over a three-year period and can be exercised during the exercise windows which generally occur twice annually; – option holders are required to fund the exercise without any financial support from any member of the Barclays Group. – Once employees become shareholders, they are subject to the Articles of BGI Holdings under which: <ul style="list-style-type: none"> – shareholders are required to hold the shares for a minimum of 355 days. As shareholders, employees derive the full risks and rewards of ownership, including voting rights and entitlement to any ordinary dividends paid by BGI Holdings; – on expiry of the minimum holding period, shareholders may, but are not obliged to, offer their shares for sale to Barclays Bank PLC during the sales windows which generally occur twice annually; – Barclays Bank PLC, at its discretion, has a right to purchase shares so offered, but is not obliged to do so. – The table below contains information on the number of shares in BGI Holdings over which options were granted, outstanding and exercised in 2007 and 2008: <table border="1" style="margin-left: auto; margin-right: auto;"> <thead> <tr> <th>Year</th> <th>Number granted during year (000s)</th> <th>Number outstanding at year end (000s)</th> <th>Number exercised (000s)</th> </tr> </thead> <tbody> <tr> <td>2007</td> <td>2,599</td> <td>7,502</td> <td>1,632</td> </tr> <tr> <td>2008</td> <td>–</td> <td>6,584</td> <td>550</td> </tr> </tbody> </table>	Year	Number granted during year (000s)	Number outstanding at year end (000s)	Number exercised (000s)	2007	2,599	7,502	1,632	2008	–	6,584	550
Year	Number granted during year (000s)	Number outstanding at year end (000s)	Number exercised (000s)											
2007	2,599	7,502	1,632											
2008	–	6,584	550											

– In 2008 BGI employees exercised options over 0.5m (2007: 1.6m) shares for consideration of £19m (2007: £57m); Barclays Bank PLC purchased 1.8m (2007: 4.9m) shares offered for sale by shareholders for consideration of £157m (2007: £488m). As at 31st December 2008, employees owned 4.5% of BGI Holdings (2007: 5.9%).

Share and Long Term Incentive Plans (continued)

Table 26: Plans under which awards not made in 2008 (continued)

Plan name	Executive Directors Eligible?	Description
		<p>BGI EOP – Accounting and disclosure</p> <ul style="list-style-type: none"> – The BGI EOP is accounted for as an equity settled share-based payment in accordance with IFRS 2 ‘Share-based Payment’. The fair value of the services received from the employees is measured by reference to the fair value of the share options granted on the date of the grant. The cost of the employee services received in respect of the share options granted is recognised in the income statement over the period that the services are received. – The cost for 2008 of £30.9m (2007: £54.8m, 2006: £37.4m) is included in staff costs in Note 8 to the accounts. In accordance with IFRS 2, details of share options granted and exercised, together with weighted average fair values at grant date and weighted average exercise prices are set out in Note 45 to the accounts. In accordance with IAS 33 ‘Earnings per Share’, unexercised options are taken into account in the calculation of diluted earnings per share as set out in Note 11 to the accounts. – For Group reporting, the exercise of options by employees is treated as a deemed disposal of interests in a subsidiary, as its holding in the subsidiary has been reduced for the consideration represented by the exercise price. Any subsequent purchase of shares offered for sale by employees is treated as a purchase of an additional investment in a subsidiary entity. The cash flows relating to these capital transactions are included in the consolidated cash flow statement and disclosed, along with other disposals and acquisitions, in Note 38 to the accounts and related movements in goodwill and minority interests are included in Notes 21 and 33 to the accounts respectively.

Going concern

The Group's business activities and financial position; the factors likely to affect its future development and performance; and its objectives and policies in managing the financial risks to which it is exposed and its capital are discussed in the Business Review.

The Directors have assessed, in the light of current and anticipated economic conditions, the Group's ability to continue as a going concern.

The Directors confirm they are satisfied that the Company and the Group have adequate resources to continue in business for the foreseeable future. For this reason, they continue to adopt the 'going concern' basis for preparing accounts.

Internal control

The Directors have responsibility for ensuring that management maintain an effective system of internal control and for reviewing its effectiveness. Such a system is designed to manage rather than eliminate the risk of failure to achieve business objectives and can only provide reasonable and not absolute assurance against material misstatement or loss.

Throughout the year ended 31st December 2008, and to date, the Group has operated a system of internal control which provides reasonable assurance of effective and efficient operations covering all controls, including financial and operational controls and compliance with laws and regulations. Processes are in place for identifying, evaluating and managing the significant risks facing the Group in accordance with the guidance 'Internal Control: Revised Guidance for Directors on the Combined Code' published by the Financial Reporting Council. The Board regularly reviews these processes through its principal Board Committees.

The Directors review the effectiveness of the system of internal control semi-annually. An internal control compliance certification process is conducted throughout the Group in support of this review. The effectiveness of controls is periodically reviewed within the business areas. Regular reports are made to the Board Audit Committee by management, Internal Audit and the compliance and legal functions covering particularly financial controls, compliance and operational controls. The Board Audit Committee monitors resolution of any identified control issues of Group level significance through to a satisfactory conclusion.

The Group Internal Control and Assurance Framework (GICAF) describes the Group's approach to internal control and details Group policies and processes. The GICAF is reviewed and approved on behalf of the Group Chief Executive by the Group Governance and Control Committee.

Quarterly risk reports are made to the Board covering risks of Group significance including credit risk, market risk and operational risk. Reports covering risk measurement standards and risk appetite are made to the Board Risk Committee. Further details of risk management procedures are given in the Risk management section on pages 69 to 149.

Management's report on internal control over financial reporting

The management of Barclays is responsible for establishing and maintaining adequate internal control over financial reporting. Barclays internal control over financial reporting is a process designed under the supervision of Barclays principal executive and principal financial officers to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external reporting purposes in accordance with International Financial Reporting Standards (IFRSs) as adopted by the European Union and the International Accounting Standards Board (IASB).

Barclays internal control over financial reporting includes policies and procedures that pertain to the maintenance of records that, in reasonable detail, accurately and fairly reflect transactions and dispositions of assets; provide reasonable assurances that transactions are recorded as necessary to permit preparation of financial statements in accordance with IFRSs and that receipts and expenditures are being made only in accordance with authorisations of management and the Directors of Barclays; and provide reasonable assurance regarding prevention or timely detection of unauthorised acquisition, use or disposition of Barclays assets that could have a material effect on Barclays financial statements.

Internal control systems, no matter how well designed, have inherent limitations and may not prevent or detect misstatements. Also, projections of any evaluation of effectiveness to future periods are subject to the risk

that internal controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

Management has assessed the effectiveness of Barclays internal control over financial reporting as of 31st December 2008. In making its assessment, management has utilised the criteria set forth by the Committee of Sponsoring Organisations of the Treadway Commission in Internal Control – Integrated Framework. Management concluded that, based on its assessment, Barclays internal control over financial reporting was effective as of 31st December 2008.

Management's assessment of and conclusion on the effectiveness of internal control over financial reporting did not include internal controls relating to certain of the Lehman Brothers North American investment banking and capital markets businesses acquired from Lehman Brothers Holdings Inc. in September 2008. These businesses have been included in Barclays consolidated financial statements for the year ended 31st December 2008. The businesses the controls relating to which have not been included in management's assessment represented approximately 1.1% of the group income and 0.2% of the total assets of Barclays for the year ended 31st December 2008.

Our independent registered public accounting firm has issued a report on Barclays internal control over financial reporting which is set out on page 192.

The system of internal financial and operational controls is also subject to regulatory oversight in the United Kingdom and overseas. Further information on supervision by the financial services regulators is provided under Supervision and Regulation in the Risk Management section on page 148. The Group Chief Executive and Group Finance Director also concluded that no significant changes were made in our internal controls or in other factors that could significantly affect these controls subsequent to their evaluation.

Statement of Directors' responsibilities for accounts

The following statement, which should be read in conjunction with the Auditors' report set out on page 191, is made with a view to distinguishing for shareholders the respective responsibilities of the Directors and of the auditors in relation to the accounts.

The Directors are required by the Companies Act 1985 to prepare accounts for each financial year and, with regards to Group accounts, in accordance with Article 4 of the IAS Regulation. The Directors have prepared individual accounts in accordance with IFRSs as adopted by the European Union. The accounts are required by law and IFRSs to present fairly the financial position of the Company and the Group and the performance for that period. The Companies Act 1985 provides, in relation to such accounts, that references to accounts giving a true and fair view are references to fair presentation.

The Directors consider that, in preparing the accounts on pages 193 to 298, and the additional information contained on pages 315 to 323, the Group has used appropriate accounting policies, supported by reasonable judgements and estimates, and that all accounting standards which they consider to be applicable have been followed.

The Directors have responsibility for ensuring that the Company and the Group keep accounting records which disclose with reasonable accuracy the financial position of the Company and the Group and which enable them to ensure that the accounts comply with the Companies Act 1985.

The Directors have general responsibility for taking such steps as are reasonably open to them to safeguard the assets of the Group and to prevent and detect fraud and other irregularities.

Disclosure controls and procedures Sec 20F Item 15 (a)

The Group Chief Executive, John Varley, and the Group Finance Director, Chris Lucas, conducted with Group Management an evaluation of the effectiveness of the design and operation of the Group's disclosure controls and procedures as at 31 st December 2008, which are defined as those controls and procedures designed to ensure that information required to be disclosed in reports filed or submitted under the US Securities Exchange Act of 1934 is recorded, processed, summarised and reported within the time periods specified in the US Securities and Exchange Commission's rules and forms. As of the date of the evaluation, the Group Chief Executive and Group Finance Director concluded that the design and operation of these disclosure controls and procedures were effective.

The Directors confirm to the best of their knowledge that:

- (a) The financial statements, prepared in accordance with the applicable set of accounting standards, give a true and fair view of the assets, liabilities, financial position and profit or loss of Barclays PLC and the undertakings included in the consolidation taken as a whole; and
- (b) The management report includes a fair review of the development and performance of the business and the position of Barclays PLC and the undertakings included in the consolidation taken as a whole, together with a description of the principal risks and uncertainties that they face.

Signed on behalf of the Board

Marcus Agius
Group Chairman

Developing Retail and Commercial banking activities in selected countries outside the UK

Acquisition of Expobank in Russia

The acquisition of Expobank in July advances Barclays strategy of increasing its exposure over time to emerging markets with good growth characteristics. With 36 branches and over 400,000 customers the acquisition provides the ideal platform for organic growth and for Barclays to become one of the leading retail and commercial banks in Russia.

Barclays PLC is a public limited company registered in England under company number 48839. The Company, originally named Barclay & Company Limited, was incorporated in England and Wales on 20th July 1896 under the Companies Acts 1862 to 1890 as a company limited by shares. The company name was changed to Barclays Bank Limited on 17th February 1917 and it was reregistered in 1982 as a public limited company under the Companies Acts 1948 to 1980. On 1st January 1985, the company changed its name to Barclays PLC.

Barclays Bank PLC is a public limited company registered in England under company number 1026167. The Bank was incorporated on 7th August 1925 under the Colonial Bank Act 1925 and on 4th October 1971 was registered as a company limited by shares under the Companies Acts 1948 to 1967. Pursuant to The Barclays Bank Act 1984, on 1st January 1985 the Bank was reregistered as a public limited company and its name was changed from Barclays Bank International Limited to Barclays Bank PLC.

All of the issued ordinary share capital of Barclays Bank PLC is owned by Barclays PLC. The Annual Report for Barclays PLC also contains the consolidated accounts of, and other information relating to, Barclays Bank PLC. The Annual Report includes information required to be included in the Barclays PLC and Barclays Bank PLC Annual Report on Form 20-F for 2008. Form 20-F will contain as exhibits certificates pursuant to Sections 302 and 906 of the Sarbanes-Oxley Act of 2002, signed by the Group Chief Executive and Group Finance Director, with respect to both Barclays PLC and Barclays Bank PLC. Except where otherwise indicated, the information given is identical with respect to both Barclays PLC and Barclays Bank PLC.

The term 'Companies Act 1985' means the company law provisions of the Companies Act 1985 (as amended) that remain in force. The term 'Companies Act 2006' means the operative company law provisions of the Companies Act 2006.

The accounts of Barclays Bank PLC included in this document do not comprise statutory accounts within the meaning of Section 240 of the Companies Act 1985. The statutory accounts of Barclays Bank PLC, which contain an unqualified audit report and do not contain any statement under Section 237(2) or (3) of that Act, will be delivered to the Registrar of Companies in accordance with Section 242 of that Act and are published as a separate document.

The term 'Barclays PLC Group' means Barclays PLC together with its subsidiaries and the term 'Barclays Bank PLC Group' means Barclays Bank PLC together with its subsidiaries. 'Barclays' and 'Group' are terms which are used to refer to either of the preceding groups when the subject matter is identical. The term 'Company' or 'parent Company' refers to Barclays PLC and the term 'Bank' refers to Barclays Bank PLC. The term 'Absa Group Limited' is used to refer to Absa Group Limited and its subsidiaries and the term 'Absa' is used to refer to the component of the Global Retail and Commercial Banking segment represented by this business. In this report, the abbreviations '£m' and '£bn' represent millions and thousands of millions of pounds sterling respectively; the abbreviations 'US\$m' and 'US\$bn' represent millions and thousands of millions of US Dollars respectively and '€m' and '€bn' represent millions and thousands of millions of euros respectively.

Statutory Accounts

The consolidated accounts of Barclays PLC and its subsidiaries are set out on pages 193 to 298 along with the accounts of Barclays PLC itself on page 208. The consolidated accounts of Barclays Bank PLC and its subsidiaries are set out on pages 299 to 312. The accounting policies on pages 193 to 201 and the Notes commencing on page 210 apply equally to both sets of accounts unless otherwise stated.

Adoption of IFRS and 2004 comparatives

The Group adopted the requirements of International Financial Reporting Standards and International Accounting Standards (collectively IFRSs) as adopted by the European Union in 2005. As permitted by IFRS 1, the accounting standards relating to financial instruments and insurance contracts have not been applied to 2004. Therefore, the 2004 comparatives are significantly different from the numbers reported in later years. n/a has been included in tables where, as a result of the application of IAS 32, IAS 39 and IFRS 4 in later years and UK GAAP in 2004, the disclosure is not applicable.

Independent Auditors' Report to the members of Barclays PLC

We have audited the Group and Parent company financial statements (the 'financial statements') of Barclays PLC (the 'Company') for the year ended 31st December 2008 which comprise the Consolidated and Parent company income statements, Consolidated and Parent company balance sheets, Consolidated and Parent company cash flow statements, Consolidated and Parent company statements of recognised income and expense, the accounting policies and the related notes in the section headed Notes to the accounts. These financial statements have been prepared under the accounting policies set out in the section headed Accounting Policies. We have also audited the information in the Remuneration Report that is described as having been audited ('the auditable part').

Respective responsibilities of Directors and Auditors

The Directors' responsibilities for preparing the Annual Report and the financial statements in accordance with applicable United Kingdom law and International Financial Reporting Standards (IFRSs) as adopted by the European Union are set out in the statement of Directors' responsibilities for the accounts within the section headed Accountability and audit. The Directors are also responsible for preparing the Remuneration Report.

Our responsibility is to audit the financial statements and the auditable part of the Remuneration Report in accordance with relevant legal and regulatory requirements and International Standards on Auditing (UK and Ireland). This report, including the opinion, has been prepared for and only for the Company's members as a body in accordance with Section 235 of the Companies Act 1985 and for no other purpose. We do not, in giving this opinion, accept or assume responsibility for any other purpose or to any other person to whom this report is shown or into whose hands it may come, save where expressly agreed by our prior consent in writing.

We report to you our opinion as to whether the financial statements give a true and fair view and whether the financial statements and the auditable part of the Remuneration Report have been properly prepared in accordance with the Companies Act 1985 and, as regards the group financial statements, Article 4 of the IAS Regulation. We also report to you whether in our opinion the information given in the Directors' report is consistent with the financial statements. The information given in the Directors' Report includes that specific information presented in the Financial Review that is cross referred from the Corporate Governance section of the Directors' Report.

In addition, we report to you if, in our opinion, the Company has not kept proper accounting records, if we have not received all the information and explanations we require for our audit, or if information specified by law regarding Directors' remuneration and other transactions is not disclosed.

We review whether the Corporate Governance report reflects the Company's compliance with the nine provisions of the 2006 FRC Combined Code specified for our review by the Listing Rules of the Financial Services Authority, and we report if it does not. We are not required to consider whether the board's statements on internal control cover all risks and controls, or form an opinion on the effectiveness of the Group's corporate governance procedures or its risk and control procedures.

We read other information contained in the Annual Report and consider whether it is consistent with the audited financial statements.

The other information comprises only the Barclays Today, Key Performance Indicators, Group Chairman's Statement, Group Chief Executive's Review, Financial Review, Corporate Sustainability, Our People, Risk Management, Directors' Report, Corporate Governance report, the unaudited part of the Remuneration Report, Accountability and Audit and Presentation of Information. We consider the implications for our report if we become aware of any apparent misstatements or material inconsistencies with the financial statements. Our responsibilities do not extend to any other information.

Basis of audit opinion

We conducted our audit in accordance with International Standards on Auditing (UK and Ireland) issued by the Auditing Practices Board. An audit includes examination, on a test basis, of evidence relevant to the amounts and disclosures in the financial statements and the auditable part of the Remuneration Report. It also includes an assessment of the significant estimates and judgments made by the Directors in the preparation of the financial statements, and of whether the accounting policies are appropriate to the Group's and Company's circumstances, consistently applied and adequately disclosed.

We planned and performed our audit so as to obtain all the information and explanations which we considered necessary in order to provide us with sufficient evidence to give reasonable assurance that the financial statements and the auditable part of the Remuneration Report are free from material misstatement, whether caused by fraud or other irregularity or error. In forming our opinion we also evaluated the overall adequacy of the presentation of information in the financial statements and the auditable part of the Remuneration Report.

Opinion

In our opinion:

- the financial statements give a true and fair view, in accordance with IFRSs as adopted by the European Union, of the state of the Group's and the Parent company's affairs as at 31st December 2008 and of the Group's and the Parent company's profit and cash flows for the year then ended;
- the financial statements and the auditable part of the Remuneration Report have been properly prepared in accordance with the Companies Act 1985 and, as regards the group financial statements, Article 4 of the IAS Regulation; and
- the information given in the Directors' report is consistent with the financial statements.

Notes

- The maintenance and integrity of the Barclays PLC website is the responsibility of the directors; the work carried out by the auditors does not involve consideration of these matters and, accordingly, the auditors accept no responsibility for any changes that may have occurred to the financial statements since they were initially presented on the website.
- Legislation in the United Kingdom governing the preparation and dissemination of financial statements may differ from legislation in other jurisdictions.

Report of Independent Registered Public Accounting Firm to the Board of Directors and Shareholders of Barclays PLC

In our opinion, the accompanying Consolidated income statements and the related Consolidated balance sheets, Consolidated statements of recognised income and expense and, Consolidated statements of cash flows present fairly, in all material respects, the financial position of Barclays PLC (the 'Company') and its subsidiaries at 31st December 2008 and 31st December 2007 and the results of their operations and cash flows for each of the three years in the period ended 31st December 2008, in conformity with International Financial Reporting Standards (IFRSs) as issued by the International Accounting Standards Board. Also, in our opinion the Company maintained, in all material respects, effective internal control over financial reporting as of 31st December 2008, based on criteria established in Internal Control – Integrated Framework issued by the Committee of Sponsoring Organizations of the Treadway Commission ('COSO'). The Company's management are responsible for these financial statements, for maintaining effective internal control over financial reporting and for its assessment of the effectiveness of internal control over financial reporting, included in 'Management's report on internal control over financial reporting' as it pertains to Barclays PLC in the section headed 'Accountability and audit'. Our responsibility is to express opinions on these financial statements and on the Company's internal control over financial reporting based on our integrated audits. We conducted our audits in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audits to obtain reasonable assurance about whether the financial statements are free of material misstatement and whether effective internal control over financial reporting was maintained in all material respects. Our audits of the financial statements included examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements, assessing the accounting principles used and significant estimates made by management, and evaluating the overall financial statement presentation. Our audit of internal control over financial reporting included obtaining an understanding of internal control over financial reporting, assessing the risk that a material weakness exists, and testing and evaluating the design and operating effectiveness of internal control based on the assessed risk. Our audits also included performing such other procedures as we considered necessary in the circumstances. We believe that our audits provide a reasonable basis for our opinions.

A company's internal control over financial reporting is a process designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles. A company's internal control over financial reporting includes those policies and procedures that (i) pertain to the maintenance of records that, in reasonable detail, accurately and fairly reflect the transactions and dispositions of the assets of the company; (ii) provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with generally accepted accounting principles, and that receipts and expenditures of the company are being made only in accordance with authorisations of management and directors of the company; and (iii) provide reasonable assurance regarding prevention or timely detection of unauthorised acquisition, use, or disposition of the company's assets that could have a material effect on the financial statements.

Because of its inherent limitations, internal control over financial reporting may not prevent or detect misstatements. Also, projections of any evaluation of effectiveness to future periods are subject to the risk that controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

As described in 'Management's report on internal control over financial reporting', management has excluded certain of the Lehman Brothers North American investment banking and capital markets businesses acquired from Lehman Brothers Holdings Inc from its assessment of internal control over financial reporting as of 31st December 2008 as they were acquired in a purchase business combination in September 2008. We have also excluded certain of the Lehman Brothers North American investment banking and capital markets businesses, acquired from Lehman Brothers Holdings Inc from our audit of internal control over financial reporting. These businesses represented approximately 1.1% of group income and 0.2% of the total Group assets for the year ended 31st December 2008.

Significant accounting policies

1. Reporting entity

These financial statements are prepared for the Barclays PLC Group ('Barclays' or 'the Group') under Section 227(2) of the Companies Act 1985. The Group is a major global financial services provider engaged in retail and commercial banking, credit cards, investment banking, wealth management and investment management services. In addition, individual financial statements have been prepared for the holding company, Barclays PLC ('the Company'), under Section 226(2)(b) of the Companies Act 1985.

Barclays PLC is a public limited company, incorporated in Great Britain and having a registered office in England.

2. Compliance with International Financial Reporting Standards

The consolidated financial statements of the Barclays PLC Group, and the individual financial statements of Barclays PLC, have been prepared in accordance with International Financial Reporting Standards (IFRSs) and interpretations issued by the International Financial Reporting Interpretations Committee (IFRIC), as published by the International Accounting Standards Board (IASB). They are also in accordance with IFRSs and IFRIC interpretations as adopted by the European Union.

The principal accounting policies applied in the preparation of the consolidated and individual financial statements are set out below. These policies have been consistently applied.

3. Basis of preparation

The consolidated and individual financial statements have been prepared under the historical cost convention modified to include the fair valuation of certain financial instruments and contracts to buy or sell non-financial items and trading inventories to the extent required or permitted under accounting standards and as set out in the relevant accounting policies. They are stated in millions of pounds Sterling (£m), the currency of the country in which Barclays PLC is incorporated.

Critical accounting estimates

The preparation of financial statements in accordance with IFRSs requires the use of certain critical accounting estimates. It also requires management to exercise judgement in the process of applying the accounting policies. The notes to the financial statements set out areas involving a higher degree of judgement or complexity, or areas where assumptions are significant to the consolidated and individual financial statements such as fair value of financial instruments (Note 50), allowance for impairment (Note 47), goodwill (Note 21), intangible assets (Note 22), and retirement benefit obligations (Note 30).

4. Consolidation

Subsidiaries

The consolidated financial statements combine the financial statements of Barclays PLC and all its subsidiaries, including certain special purpose entities (SPEs) where appropriate, made up to 31st December. Entities qualify as subsidiaries where the Group has the power to govern the financial and operating policies of the entity so as to obtain benefits from its activities, generally accompanying a shareholding of more than one half of the voting rights. The existence and effect of potential voting rights that are currently exercisable or convertible are considered in assessing whether the Group controls another entity. Details of the principal subsidiaries are given in Note 41.

SPEs are consolidated when the substance of the relationship between the Group and that entity indicates control. Potential indicators of control include, amongst others, an assessment of the Group's exposure to the risks and benefits of the SPE.

This assessment of risks and benefits is based on arrangements in place and the assessed risk exposures at inception. The initial assessment is reconsidered at a later date if:

- the Group acquires additional interests in the entity;
- the contractual arrangements of the entity are amended such that the relative exposure to risks and benefits change; or
- if the Group acquires control over the main operating and financial decisions of the entity.

Subsidiaries are consolidated from the date on which control is transferred to the Group and cease to be consolidated from the date that control ceases.

The acquisition method of accounting is used to account for the purchase of subsidiaries. The cost of an acquisition is measured at the fair value of the assets given, equity instruments issued and liabilities incurred or assumed, plus any costs directly related to the acquisition.

The excess of the cost of an acquisition over the Group's share of the fair value of the identifiable net assets acquired is recorded as goodwill. See accounting policy 14 for the accounting policy for goodwill. A gain on acquisition is recognised in profit or loss if there is an excess of the Group's share of the fair value of the identifiable net assets acquired over the cost of the acquisition. Intra-group transactions and balances are eliminated on consolidation and consistent accounting policies are used throughout the Group for the purposes of the consolidation.

As the consolidated financial statements include partnerships where a Group member is a partner, advantage has been taken of the exemption of Regulation 7 of the Partnerships and Unlimited Companies (Accounts) Regulations 1993 with regard to the preparation and filing of individual partnership financial statements.

In the individual financial statements, investments in subsidiaries are stated at cost less impairment, if any.

Associates and joint ventures

An associate is an entity in which the Group has significant influence, but not control, over the operating and financial management policy decisions. This is generally demonstrated by the Group holding in excess of 20%, but no more than 50%, of the voting rights.

A joint venture exists where the Group has a contractual arrangement with one or more parties to undertake activities typically, though not necessarily, through entities which are subject to joint control.

Unless designated as at fair value through profit and loss as set out in policy 7, the Group's investments in associates and joint ventures are initially recorded at cost and increased (or decreased) each year by the Group's share of the post-acquisition profit (or loss), or other movements reflected directly in the equity of the associated or jointly controlled entity. Goodwill arising on the acquisition of an associate or joint venture is included in the carrying amount of the investment (net of any accumulated impairment loss). When the Group's share of losses or other reductions in equity in an associate or joint venture equals or exceeds the recorded interest, including any other unsecured receivables, the Group does not recognise further losses, unless it has incurred obligations or made payments on behalf of the entity.

The Group's share of the results of associates and joint ventures is based on financial statements made up to a date not earlier than three months before the balance sheet date, adjusted to conform with the accounting policies of the Group. Unrealised gains on transactions are eliminated to the extent of the Group's interest in the investee. Unrealised losses are also eliminated unless the transaction provides evidence of impairment in the asset transferred.

In the individual financial statements, investments in associates and joint ventures are stated at cost less impairment, if any.

5. Foreign currency translation

Items included in the financial statements of each of the Group's entities are measured using their functional currency, being the currency of the primary economic environment in which the entity operates.

Foreign currency transactions are translated into the appropriate functional currency using the exchange rates prevailing at the dates of the transactions. Monetary items denominated in foreign currencies are retranslated at the rate prevailing at the period end. Foreign exchange gains and losses resulting from the retranslation and settlement of these items are recognised in the income statement except for qualifying cash flow hedges or hedges of net investments. See policy 12 for the policies on hedge accounting.

Non-monetary assets that are measured at fair value are translated using the exchange rate at the date that the fair value was determined. Exchange differences on equities and similar non-monetary items held at fair value through profit or loss, are reported as part of the fair value gain or loss. Translation differences on equities classified as available for sale financial assets and non-monetary items are included directly in equity.

For the purposes of translation into the presentational currency, assets, liabilities and equity of foreign operations are translated at the closing rate, and items of income and expense are translated into Sterling at the rates prevailing on the dates of the transactions, or average rates of exchange where these approximate to actual rates.

The exchange differences arising on the translation of a foreign operation are included in cumulative translation reserves within shareholders' equity and included in the profit or loss on disposal or partial disposal of the operation.

Goodwill and fair value adjustments arising on the acquisition of foreign subsidiaries are maintained in the functional currency of the foreign operation, translated at the closing rate and are included in hedges of net investments where appropriate.

On transition to IFRS, the Group brought forward a nil opening balance on the cumulative foreign currency translation adjustment arising from the retranslation of foreign operations, which is shown as a separate item in shareholders' equity.

6. Interest, fees and commissions

Interest

Interest is recognised in interest income and interest expense in the income statement for all interest bearing financial instruments classified as held to maturity, available for sale or other loans and receivables using the effective interest method.

The effective interest method is a method of calculating the amortised cost of a financial asset or liability (or group of assets and liabilities) and of allocating the interest income or interest expense over the relevant period. The effective interest rate is the rate that exactly discounts the expected future cash payments or receipts through the expected life of the financial instrument, or when appropriate, a shorter period, to the net carrying amount of the instrument. The application of the method has the effect of recognising income (and expense) receivable (or payable) on the instrument evenly in proportion to the amount outstanding over the period to maturity or repayment.

In calculating effective interest, the Group estimates cash flows (using projections based on its experience of customers' behaviour) considering all contractual terms of the financial instrument but excluding future credit losses. Fees, including those for early redemption, are included in the calculation to the extent that they can be measured and are considered to be an integral part of the effective interest rate. Cash flows arising from the direct and incremental costs of issuing financial instruments are also taken into account in the calculation. Where it is not possible to otherwise estimate reliably the cash flows or the expected life of a financial instrument, effective interest is calculated by reference to the payments or receipts specified in the contract, and the full contractual term.

Fees and commissions

Unless included in the effective interest calculation, fees and commissions are recognised on an accruals basis as the service is provided. Fees and commissions not integral to effective interest arising from negotiating, or participating in the negotiation of a transaction from a third party, such as the acquisition of loans, shares or other securities or the purchase or sale of businesses, are recognised on completion of the underlying transaction. Portfolio and other management advisory and service fees are recognised based on the applicable service contracts. Asset management fees related to investment funds are recognised over the period the service is provided. The same principle is applied to the recognition of income from wealth management, financial planning and custody services that are continuously provided over an extended period of time.

Commitment fees, together with related direct costs, for loan facilities where draw down is probable are deferred and recognised as an adjustment to the effective interest on the loan once drawn. Commitment fees in relation to facilities where draw down is not probable are recognised over the term of the commitment.

Insurance premiums

Insurance premiums are recognised in the period earned.

Net trading income

Income arises from the margins which are achieved through market-making and customer business and from changes in fair value caused by movements in interest and exchange rates, equity prices and other market variables. Trading positions are held at fair value and the resulting gains and losses are included in the income statement, together with interest and dividends arising from long and short positions and funding costs relating to trading activities.

Dividends from subsidiaries

In the individual financial statements of Barclays PLC, dividends from subsidiaries are recognised when the right to receive payment is established, which is when the dividends are received or when the dividends are appropriately authorised by the subsidiary.

7. Financial assets and liabilities

Financial assets

The Group classifies its financial assets in the following categories: financial instruments at fair value through profit or loss; loans and receivables; held to maturity investments and available for sale financial assets. Management determines the classification of financial assets and liabilities at initial recognition.

Financial instruments at fair value through profit or loss

Financial instruments are classified in this category if they are held for trading, or if they are designated by management under the fair value option. Instruments are classified as held for trading if they are:

- acquired principally for the purposes of selling or repurchasing in the near term;
- part of a portfolio of identified financial instruments that are managed together and for which there is evidence of a recent actual pattern of short-term profit-taking; or
- a derivative, except for a derivative that is a financial guarantee contract or a designated and effective hedging instrument.

It is not possible to transfer a financial instrument out of this category whilst it is held or issued with the exception of non-derivative financial assets held for trading which may be transferred out of this category from 1st July 2008 after initial classification where:

- in rare circumstances, it is no longer held for the purpose of selling or repurchasing in the near term, or
- it is no longer held for the purpose of trading, it would have met the definition of a loan and receivable on initial classification and the Group has the intention and ability to hold it for the foreseeable future or until maturity.

Financial instruments included in this category are recognised initially at fair value and transaction costs are taken directly to the income statement. Gains and losses arising from changes in fair value are included directly in the income statement. The instruments are derecognised when the rights to receive cash flows have expired or the Group has transferred substantially all the risks and rewards of ownership and the transfer qualifies for derecognition.

Regular way purchases and sales of financial instruments held for trading or designated under the fair value option are recognised on trade date, being the date on which the Group commits to purchase or sell the asset. The fair value option is used in the following circumstances:

- financial assets backing insurance contracts and financial assets backing investment contracts are designated at fair value through profit or loss because the related liabilities have cash flows that are contractually based on the performance of the assets or the related liabilities are insurance contracts whose measurement incorporates current information. Fair valuing the assets through profit and loss significantly reduces the recognition inconsistencies that would arise if the financial assets were classified as available for sale;

- b) financial assets, loans to customers, financial liabilities, financial guarantees and structured notes may be designated at fair value through profit or loss if they contain substantive embedded derivatives;
- c) financial assets, loans to customers, financial liabilities, financial guarantees and structured notes may be designated at fair value through profit or loss where doing so significantly reduces measurement inconsistencies that would arise if the related derivatives were treated as held for trading and the underlying financial instruments were carried at amortised cost; and
- d) certain private equity and other investments that are managed, and evaluated on a fair value basis in accordance with a documented risk management or investment strategy and reported to key management personnel on that basis.

Loans and receivables

Loans and receivables are non-derivative financial assets with fixed or determinable payments that are not quoted in an active market and which are not classified as available for sale. Loans and receivables are initially recognised at fair value including direct and incremental transaction costs. They are subsequently valued at amortised cost, using the effective interest method (see accounting policy 6). They are derecognised when the rights to receive cash flows have expired or the Group has transferred substantially all the risks and rewards of ownership.

Regular way purchases and sales of loans and receivables are recognised on contractual settlement.

Held to maturity

Held to maturity investments are non-derivative financial assets with fixed or determinable payments that the Group's management has the intention and ability to hold to maturity. They are initially recognised at fair value including direct and incremental transaction costs. They are subsequently valued at amortised cost, using the effective interest method (see accounting policy 6). They are derecognised when the rights to receive cash flows have expired.

Regular way purchases of held to maturity financial assets are recognised on trade date, being the date on which the Group commits to purchase the asset.

Available for sale

Available for sale assets are non-derivative financial assets that are designated as available for sale and are not categorised into any of the other categories described above. They are initially recognised at fair value including direct and incremental transaction costs. They are subsequently held at fair value. Gains and losses arising from changes in fair value are included as a separate component of equity until sale when the cumulative gain or loss is transferred to the income statement. Interest determined using the effective interest method (see accounting policy 6), impairment losses and translation differences on monetary items are recognised in the income statement. The assets are derecognised when the rights to receive cash flows have expired or the Group has transferred substantially all the risks and rewards of ownership.

Regular way purchases and sales of available for sale financial instruments are recognised on trade date, being the date on which the Group commits to purchase or sell the asset.

A financial asset classified as available for sale that would have met the definition of loans and receivables may only be transferred from the available for sale classification where the Group has the intention and the ability to hold the asset for the foreseeable future or until maturity.

Embedded derivatives

Some hybrid contracts contain both a derivative and a non-derivative component. In such cases, the derivative component is termed an embedded derivative. Where the economic characteristics and risks of the embedded derivatives are not closely related to those of the host contract, and the host contract itself is not carried at fair value through profit or loss, the embedded derivative is bifurcated and reported at fair value with gains and losses being recognised in the income statement.

Profits or losses cannot be recognised on the initial recognition of embedded derivatives unless the host contract is also carried at fair value.

Loan commitments

Loan commitments, where the Group has a past practice of selling the resulting assets shortly after origination, are held at fair value through profit or loss. Other loan commitments are accounted for in accordance with policy 23.

Financial liabilities

Financial liabilities are measured at amortised cost, except for trading liabilities and liabilities designated at fair value, which are held at fair value through profit or loss. Financial liabilities are derecognised when extinguished.

Determining fair value

Where the classification of a financial instrument requires it to be stated at fair value, fair value is determined by reference to a quoted market price for that instrument or by using a valuation model. Where the fair value is calculated using valuation models, the methodology is to calculate the expected cash flows under the terms of each specific contract and then discount these values back to a present value. These models use as their basis independently sourced market parameters including, for example, interest rate yield curves, equities and commodities prices, option volatilities and currency rates. For financial liabilities measured at fair value, the carrying amount reflects the effect on fair value of changes in own credit spreads by applying the appropriate Barclays credit default swap spreads. Most market parameters are either directly observable or are implied from instrument prices. The model may perform numerical procedures in the pricing such as interpolation when input values do not directly correspond to the most actively traded market trade parameters. However, where valuations include significant unobservable inputs, the transaction price is deemed to provide the best evidence of initial fair value for accounting purposes. As such, profits or losses are recognised upon trade inception only when such profits can be measured solely by reference to observable market data. For valuations that include significant unobservable inputs, the difference between the model valuation and the initial transaction price is recognised in profit or loss:

- a) on a straight-line basis over the term of the transaction, or over the period until all model inputs will become observable where appropriate; or;
- b) released in full where previously unobservable inputs become observable.

Various factors influence the availability of observable inputs and these may vary from product to product and change over time. Factors include for example, the depth of activity in the relevant market, the type of product, whether the product is new and not widely traded in the market place, the maturity of market modelling and the nature of the transaction (bespoke or generic). To the extent that valuation is based on models or inputs that are not observable in the market, the determination of fair value can be more subjective, dependant on the significance of the unobservable input to the overall valuation. Unobservable inputs are determined based on the best information available, for example by reference to similar assets, similar maturities or other analytical techniques.

8. Impairment of financial assets

The Group assesses at each balance sheet date whether there is objective evidence that loans and receivables or available for sale financial investments are impaired. These are impaired and impairment losses are incurred if, and only if, there is objective evidence of impairment as a result of one or more loss events that occurred after the initial recognition of the asset and prior to the balance sheet date ('a loss event') and that loss event or events has had an impact on the estimated future cash flows of the financial asset or the portfolio that can be reliably estimated. The criteria that the Group uses to determine that there is objective evidence of an impairment loss include:

- a) significant financial difficulty of the issuer or obligor;
- b) a breach of contract, such as a default or delinquency in interest or principal payments;
- c) the lender, for economic or legal reasons relating to the borrower's financial difficulty, granting to the borrower a concession that the lender would not otherwise consider;
- d) it becomes probable that the borrower will enter bankruptcy or other financial reorganisation;
- e) the disappearance of an active market for that financial asset because of financial difficulties; or

- f) observable data indicating that there is a measurable decrease in the estimated future cash flows from a portfolio of financial assets since the initial recognition of those assets, although the decrease cannot yet be identified with the individual financial assets in the portfolio, including:
- (i) adverse changes in the payment status of borrowers in the portfolio;
 - (ii) national or local economic conditions that correlate with defaults on the assets in the portfolio.

For loans and receivables the Group first assesses whether objective evidence of impairment exists individually for loans and receivables that are individually significant, and individually or collectively for loans and receivables that are not individually significant. If the Group determines that no objective evidence of impairment exists for an individually assessed loan and receivable, whether significant or not, it includes the asset in a group of loans and receivables with similar credit risk characteristics and collectively assesses them for impairment. Loans and receivables that are individually assessed for impairment and for which an impairment loss is or continues to be recognised are not included in a collective assessment of impairment.

The amount of impairment loss is measured as the difference between the asset's carrying amount and the present value of estimated future cash flows discounted at the asset's original effective interest rate. The amount of the loss is recognised using an allowance account and recognised in the income statement.

Where appropriate, the calculation of the present value of the estimated future cash flows of a collateralised loan and receivable asset reflect the cash flows that may result from foreclosure costs for obtaining and selling the collateral, whether or not foreclosure is probable.

For the purposes of a collective evaluation of impairment, loans and receivables are grouped on the basis of similar risk characteristics, taking into account asset type, industry, geographical location, collateral type, past-due status and other relevant factors. These characteristics are relevant to the estimation of future cash flows for groups of such assets by being indicative of the counterparty's ability to pay all amounts due according to the contractual terms of the assets being evaluated.

Future cash flows in a group of loans and receivables that are collectively evaluated for impairment are estimated on the basis of the contractual cash flows of the assets in the group and historical loss experience for assets with credit risk characteristics similar to those in the group. Historical loss experience is adjusted based on current observable data to reflect the effects of current conditions that did not affect the period on which the historical loss experience is based and to remove the effects of conditions in the historical period that do not currently exist.

The methodology and assumptions used for estimating future cash flows are reviewed regularly to reduce any differences between loss estimates and actual loss experience.

Following impairment, interest income is recognised using the effective rate of interest which was used to discount the future cash flows for the purpose of measuring the impairment loss.

When a loan is uncollectable, it is written off against the related allowance for loan impairment. Such loans are written off after all the necessary procedures have been completed and the amount of the loss has been determined. Subsequent recoveries of amounts previously written off are credited to the income statement.

If, in a subsequent period, the amount of the impairment loss decreases and the decrease can be related objectively to an event occurring after the impairment was recognised, the previously recognised impairment loss is reversed by adjusting the allowance account. The amount of the reversal is recognised in the income statement.

Equity securities acquired in exchange for loans in order to achieve an orderly realisation are accounted for as a disposal of the loan and an acquisition of equity securities. Where control is obtained over an entity as a result of the transaction, the entity is consolidated. Any further impairment of the assets or business acquired is treated as an impairment of the relevant asset or business and not as an impairment of the original instrument.

In the case of available for sale equity securities, a significant or prolonged decline in the fair value of the security below its cost is also considered in determining whether impairment exists. Where such evidence exists, the cumulative net loss that has been previously recognised directly in equity is removed from equity and recognised in the income statement. In the case of debt instruments classified as available for sale, impairment is assessed based on the same criteria as all other financial assets. Reversals of impairment of debt instruments are recognised in the income statement. Reversals of impairment of equity shares are not recognised in the income statement, increases in the fair value of equity shares after impairment are recognised directly in equity.

9. Sale and repurchase agreements (including stock borrowing and lending)

Securities may be lent or sold subject to a commitment to repurchase them (a 'repo'). Such securities are retained on the balance sheet when substantially all the risks and rewards of ownership remain with the Group, and the counterparty liability is included separately on the balance sheet when cash consideration is received.

Similarly, where the Group borrows or purchases securities subject to a commitment to resell them (a 'reverse repo') but does not acquire the risks and rewards of ownership, the transactions are treated as collateralised loans when cash consideration is paid, and the securities are not included in the balance sheet.

The difference between sale and repurchase price is accrued over the life of the agreements using the effective interest method. Securities lent to counterparties are also retained in the financial statements. Securities borrowed are not recognised in the financial statements, unless these are sold to third parties, at which point the obligation to repurchase the securities is recorded as a trading liability at fair value and any subsequent gain or loss included in net trading income.

10. Securitisation transactions

Certain Group undertakings have issued debt securities or have entered into funding arrangements with lenders in order to finance specific loans and advances to customers.

All financial assets continue to be held on the Group balance sheet, and a liability recognised for the proceeds of the funding transaction, unless:

- a) substantially all the risks and rewards associated with the financial instruments have been transferred, in which case, the assets are derecognised in full; or
- b) if a significant portion, but not all, of the risks and rewards have been transferred, the asset is derecognised entirely if the transferee has the ability to sell the financial asset, otherwise the asset continues to be recognised only to the extent of the Group's continuing involvement.

Where a) or b) above applies to a fully proportionate share of all or specifically identified cash flows, the relevant accounting treatment is applied to that proportion of the asset.

11. Collateral and netting

The Group enters into master agreements with counterparties whenever possible and, when appropriate, obtains collateral. Master agreements provide that, if an event of default occurs, all outstanding transactions with the counterparty will fall due and all amounts outstanding will be settled on a net basis.

Collateral

The Group obtains collateral in respect of customer liabilities where this is considered appropriate. The collateral normally takes the form of a lien over the customer's assets and gives the Group a claim on these assets for both existing and future customer liabilities.

The Group also receives collateral in the form of cash or securities in respect of other credit instruments, such as stock borrowing contracts, and derivative contracts in order to reduce credit risk. Collateral received in the form of securities is not recorded on the balance sheet. Collateral received in the form of cash is recorded on the balance sheet with a corresponding liability. These items are assigned to deposits received from bank or other counterparties. Any interest payable or receivable arising is recorded as interest expense or interest income respectively except for funding costs relating to trading activities which are recorded in net trading income.

Netting

Financial assets and liabilities are offset and the net amount reported in the balance sheet if, and only if, there is a legally enforceable right to set off the recognised amounts and there is an intention to settle on a net basis, or to realise an asset and settle the liability simultaneously. In many cases, even though master netting agreements are in place, the lack of an intention to settle on a net basis results in the related assets and liabilities being presented gross in the balance sheet.

12. Hedge accounting

Derivatives are used to hedge interest rate, exchange rate, commodity, and equity exposures and exposures to certain indices such as house price indices and retail price indices related to non-trading positions.

Where derivatives are held for risk management purposes, and when transactions meet the required criteria, the Group applies fair value hedge accounting, cash flow hedge accounting, or hedging of a net investment in a foreign operation as appropriate to the risks being hedged.

When a financial instrument is designated as a hedge, the Group formally documents the relationship between the hedging instrument and hedged item as well as its risk management objectives and its strategy for undertaking the various hedging transactions. The Group also documents its assessment, both at hedge inception and on an ongoing basis, of whether the derivatives that are used in hedging transactions are highly effective in offsetting changes in fair values or cash flows of hedged items.

The Group discontinues hedge accounting when:

- a) It is determined that a derivative is not, or has ceased to be, highly effective as a hedge;
- b) the derivative expires, or is sold, terminated, or exercised;
- c) the hedged item matures or is sold or repaid; or
- d) a forecast transaction is no longer deemed highly probable.

In certain circumstances, the Group may decide to cease hedge accounting even though the hedge relationship continues to be highly effective by no longer designating the financial instrument as a hedging instrument. To the extent that the changes in the fair value of the hedging derivative differ from changes in the fair value of the hedged risk in the hedged item; or the cumulative change in the fair value of the hedging derivative differs from the cumulative change in the fair value of expected future cash flows of the hedged item, the hedge is deemed to include ineffectiveness. The amount of ineffectiveness, provided it is not so great as to disqualify the entire hedge for hedge accounting, is recorded in the income statement.

Fair value hedge accounting

Changes in fair value of derivatives that qualify and are designated as fair value hedges are recorded in the income statement, together with changes in the fair value of the hedged asset or liability that are attributable to the hedged risk.

If the hedge relationship no longer meets the criteria for hedge accounting, it is discontinued. For fair value hedges of interest rate risk, the fair value adjustment to the hedged item is amortised to the income statement over the period to maturity of the previously designated hedge relationship using the effective interest method.

If the hedged item is sold or repaid, the unamortised fair value adjustment is recognised immediately in the income statement.

Cash flow hedges

For qualifying cash flow hedges, the fair value gain or loss associated with the effective portion of the cash flow hedge is recognised initially in shareholders' equity, and recycled to the income statement in the periods when the hedged item will affect profit or loss. Any ineffective portion of the gain or loss on the hedging instrument is recognised in the income statement immediately.

When a hedging instrument expires or is sold, or when a hedge no longer meets the criteria for hedge accounting, any cumulative gain or loss existing in equity at that time remains in equity and is recognised when the hedged item is ultimately recognised in the income statement. When a forecast transaction is no longer expected to occur, the cumulative gain or loss that was recognised in equity is immediately transferred to the income statement.

Hedges of net investments

Hedges of net investments in foreign operations, including monetary items that are accounted for as part of the net investment, are accounted for similarly to cash flow hedges; the effective portion of the gain or loss on the hedging instrument is recognised directly in equity and the ineffective portion is recognised immediately in the income statement. The cumulative gain or loss previously recognised in equity is recognised in the income statement on the disposal or partial disposal of the foreign operation.

Hedges of net investments may include non-derivative liabilities as well as derivative financial instruments although for a non-derivative liability only the foreign exchange risk is designated as a hedge.

Derivatives that do not qualify for hedge accounting

Derivative contracts entered into as economic hedges that do not qualify for hedge accounting are held at fair value through profit or loss.

13. Property, plant and equipment

Property and equipment is stated at cost less accumulated depreciation and provisions for impairment, if any. Additions and subsequent expenditures are capitalised only to the extent that they enhance the future economic benefits expected to be derived from the assets.

Depreciation is provided on the depreciable amount of items of property and equipment on a straight-line basis over their estimated useful economic lives. The depreciable amount is the gross carrying amount, less the estimated residual value at the end of its useful economic life.

The Group uses the following annual rates in calculating depreciation:

Freehold buildings and long-leasehold property (more than 50 years to run)	2-3.3%
Leasehold property (less than 50 years to run)	Over the remaining life of the lease
Costs of adaptation of freehold and leasehold property ^a	7-10%
Equipment installed in freehold and leasehold property ^a	7-10%
Computers and similar equipment	20-33%
Fixtures and fittings and other equipment	10-20%

Depreciation rates, methods and the residual values underlying the calculation of depreciation of items of property, plant and equipment are kept under review to take account of any change in circumstances.

When deciding on depreciation rates and methods, the principal factors the Group takes into account are the expected rate of technological developments and expected market requirements for, and the expected pattern of usage of, the assets. When reviewing residual values, the Group estimates the amount that it would currently obtain for the disposal of the asset after deducting the estimated cost of disposal if the asset were already of the age and condition expected at the end of its useful economic life.

No depreciation is provided on freehold land, although, in common with all long-lived assets, it is subject to impairment testing, if deemed appropriate.

Gains and losses on disposals are determined by comparing the proceeds with the carrying amount and are recognised in the income statement.

14. Intangible assets

Goodwill

Goodwill arises on the acquisition of subsidiary and associated entities and joint ventures, and represents the excess of the fair value of the purchase consideration and direct costs of making the acquisition, over the fair value of the Group's share of the assets acquired, and the liabilities and contingent liabilities assumed on the date of the acquisition.

For the purpose of calculating goodwill, fair values of acquired assets, liabilities and contingent liabilities are determined by reference to market values or by discounting expected future cash flows to present value. This discounting is either performed using market rates or by using risk-free rates and risk-adjusted expected future cash flows. Goodwill is capitalised and reviewed annually for impairment, or more frequently when there are indications that impairment may have occurred. Goodwill is allocated to cash-generating units for the purpose of impairment testing. Goodwill on acquisitions of associates and joint ventures is included in the amount of the investment. Gains and losses on the disposal of an entity include the carrying amount of the goodwill relating to the entity sold.

The carrying amount of goodwill in the UK GAAP balance sheet as at 31st December 2003 has been brought forward without adjustment on transition to IFRSs.

Computer software

Computer software is stated at cost, less amortisation and provisions for impairment, if any.

The identifiable and directly associated external and internal costs of acquiring and developing software are capitalised where the software is controlled by the Group, and where it is probable that future economic benefits that exceed its cost will flow from its use over more than one year. Costs associated with maintaining software are recognised as an expense when incurred.

Capitalised computer software is amortised over three to five years.

Other intangible assets

Other intangible assets consist of brands, customer lists, licences and other contracts, core deposit intangibles, mortgage servicing rights and customer relationships. Other intangible assets are initially recognised when they are separable or arise from contractual or other legal rights, the cost can be measured reliably and, in the case of intangible assets not acquired in a business combination, where it is probable that future economic benefits attributable to the assets will flow from their use. The value of intangible assets which are acquired in a business combination is generally determined using income approach methodologies such as the discounted cash flow method and the relief from royalty method that estimate net cash flows attributable to an asset over its economic life and discount to present value using an appropriate rate of return based on the cost of equity adjusted for risk.

Other intangible assets are stated at cost less amortisation and provisions for impairment, if any, and are amortised over their useful lives in a manner that reflects the pattern to which they contribute to future cash flows, generally over 4-25 years.

15. Impairment of property, plant and equipment and intangible assets

At each balance sheet date, or more frequently where events or changes in circumstances dictate, property, plant and equipment and intangible assets, are assessed for indications of impairment. If indications are present, these assets are subject to an impairment review. Goodwill is subject to an impairment review as at the balance sheet date each year. The impairment review comprises a comparison of the carrying amount of the asset with its recoverable amount: the higher of the asset's or the cash-generating unit's net selling price and its value in use. Net selling price is calculated by reference to the amount at which the asset could be disposed of in a binding sale agreement in an arm's length transaction evidenced by an active market or recent transactions for similar assets. Value in use is calculated by discounting the expected future cash flows obtainable as a result of the asset's continued use, including those resulting from its ultimate disposal, at a market-based discount rate on a pre-tax basis.

The carrying values of fixed assets and goodwill are written down by the amount of any impairment and this loss is recognised in the income statement in the period in which it occurs. A previously recognised impairment loss relating to a fixed asset may be reversed in part or in full when a change in circumstances leads to a change in the estimates used to determine the fixed asset's recoverable amount. The carrying amount of the fixed asset will only be increased up to the amount that it would have been had the original impairment not been recognised. Impairment losses on goodwill are not reversed. For the purpose of conducting impairment reviews, cash-generating units are the lowest level at which management monitors the return on investment on assets.

16. Financial guarantees

Financial guarantee contracts are contracts that require the issuer to make specified payments to reimburse the holder for a loss it incurs because a specified debtor fails to make payments when due in accordance with the terms of a debt instrument.

Financial guarantees are initially recognised in the financial statements at fair value on the date that the guarantee was given. Other than where the fair value option is applied, subsequent to initial recognition, the bank's liabilities under such guarantees are measured at the higher of the initial measurement, less amortisation calculated to recognise in the income statement any fee income earned over the period, and any financial obligation arising as a result of the guarantees at the balance sheet date, in accordance with policy 23.

Any increase in the liability relating to guarantees is taken to the income statement in Provisions for undrawn contractually committed facilities and guarantees provided. Any liability remaining is recognised in the income statement when the guarantee is discharged, cancelled or expires.

Note

^a Where leasehold property has a remaining useful life of less than 15 years, costs of adaptation and installed equipment are depreciated over the remaining life of the lease.

17. Issued debt and equity securities

Issued financial instruments or their components are classified as liabilities where the contractual arrangement results in the Group having a present obligation to either deliver cash or another financial asset to the holder, to exchange financial instruments on terms that are potentially unfavourable or to satisfy the obligation otherwise than by the exchange of a fixed amount of cash or another financial asset for a fixed number of equity shares. Issued financial instruments, or their components, are classified as equity where they meet the definition of equity and confer on the holder a residual interest in the assets of the Company. The components of issued financial instruments that contain both liability and equity elements are accounted for separately with the equity component being assigned the residual amount after deducting from the instrument as a whole the amount separately determined as the fair value of the liability component.

Financial liabilities, other than trading liabilities and financial liabilities designated at fair value, are carried at amortised cost using the effective interest method as set out in policy 6. Derivatives embedded in financial liabilities that are not designated at fair value are accounted for as set out in policy 7. Equity instruments, including share capital, are initially recognised at net proceeds, after deducting transaction costs and any related income tax. Dividend and other payments to equity holders are deducted from equity, net of any related tax.

18. Share capital

Share issue costs

Incremental costs directly attributable to the issue of new shares or options including those issued on the acquisition of a business are shown in equity as a deduction, net of tax, from the proceeds.

Dividends on ordinary shares

Dividends on ordinary shares are recognised in equity in the period in which they are paid or, if earlier, approved by the Barclays PLC (the Company) shareholders.

Treasury shares

Where the Company or any member of the Group purchases the Company's share capital, the consideration paid is deducted from shareholders' equity as treasury shares until they are cancelled. Where such shares are subsequently sold or reissued, any consideration received is included in shareholders' equity.

19. Insurance contracts and investment contracts

The Group offers wealth management, term assurance, annuity, property and payment protection insurance products to customers that take the form of long- and short-term insurance contracts.

The Group classifies its wealth management and other products as insurance contracts where these transfer significant insurance risk, generally where the benefits payable on the occurrence of an insured event are at least 5% more than the benefits that would be payable if the insured event does not occur.

Contracts that do not contain significant insurance risk or discretionary participation features are classified as investment contracts. Financial assets and liabilities relating to investment contracts, and assets backing insurance contracts are classified and measured as appropriate under IAS 39, 'Financial Instruments: Recognition and Measurement'.

Long-term insurance contracts

These contracts, insure events associated with human life (for example, death or survival) over a long duration. Premiums are recognised as revenue when they become payable by the contract holder. Claims and surrenders are accounted for when notified. Maturities on the policy maturity date and regular withdrawals are accounted for when due.

A liability for contractual benefits that are expected to be incurred in the future is recorded when the premiums are recognised, based on the expected discounted value of the benefit payments and directly related administration costs, less the expected discounted value of the future premiums that would be required to meet the benefits and other expenses. The calculation of the liability contains assumptions regarding mortality, maintenance expenses and investment income.

Liabilities under unit-linked life insurance contracts (such as endowment policies) in addition reflect the value of assets held within unitised investment pools.

Short-term insurance contracts

Under its payment protection insurance products the Group is committed to paying benefits to the policyholder rather than forgiving interest or principal on the occurrence of an insured event, such as unemployment, sickness, or injury. Property insurance contracts mainly compensate the policyholders for damage to their property or for the value of property lost.

Premiums are recognised as revenue proportionally over the period of the coverage. Claims and claims handling costs are charged to income as incurred, based on the estimated liability for compensation owed to policyholders arising from events that have occurred up to the balance sheet date even if they have not yet been reported to the Group, based on assessments of individual cases reported to the Group and statistical analyses for the claims incurred but not reported.

Deferred acquisition costs (DAC)

Commissions and other costs that are related to securing new insurance and investment contracts are capitalised and amortised over the estimated lives of the relevant contracts.

Deferred income liability

Fees that are designed to recover commissions and other costs related to either securing new insurance and investment contracts or renewing existing investment contracts are included as a liability and amortised over the estimated life of the contract.

Value of business acquired

On acquisition of a portfolio of contracts, such as through the acquisition of a subsidiary, the Group recognises an intangible asset representing the value of business acquired (VOBA), representing the future profits embedded in acquired insurance contracts and investment contracts with a discretionary participation feature. The asset is amortised over the remaining terms of the acquired contracts.

Liability adequacy test

Liability adequacy tests are performed at each balance sheet date to ensure the adequacy of contract liabilities net of DAC and VOBA assets. Current best estimates of future contractual cash flows, claims handling and administration costs, and investment returns from the assets backing the liabilities are taken into account in the tests. Where a deficiency is highlighted by the test, DAC and VOBA assets are written off first, and insurance liabilities increased when these are written off in full. Any deficiency is immediately recognised in the income statement.

Reinsurance

Short- and long-term insurance business is ceded to reinsurers under contracts to transfer part or all of one or more of the following risks: mortality, investment and expenses. All such contracts are dealt with as insurance contracts. The benefits to which the Group is entitled under its reinsurance contracts are recognised as reinsurance assets. The Group assesses reinsurance assets at each balance sheet date. If there is objective evidence of impairment, the carrying amount of the reinsurance asset is reduced accordingly resulting in a charge to the income statement.

20. Leases

Lessor

Assets leased to customers under agreements, which transfer substantially all the risks and rewards of ownership, with or without ultimate legal title, are classified as finance leases. When assets are held subject to a finance lease, the present value of the lease payments, discounted at the rate of interest implicit in the lease, is recognised as a receivable. The difference between the total payments receivable under the lease and the present value of the receivable is recognised as unearned finance income, which is allocated to accounting periods under the pre-tax net investment method to reflect a constant periodic rate of return.

Assets leased to customers under agreements which do not transfer substantially all the risks and rewards of ownership are classified as operating leases. The leased assets are included within property, plant and equipment on the Group's balance sheet and depreciation is provided on the depreciable amount of these assets on a systematic basis over their estimated useful lives. Lease income is recognised on a straight-line basis over the period of the lease unless another systematic basis is more appropriate.

Lessee

The leases entered into by the Group are primarily operating leases. Operating lease rentals payable are recognised as an expense in the income statement on a straight-line basis over the lease term unless another systematic basis is more appropriate.

21. Employee benefits

The Group provides employees worldwide with post-retirement benefits mainly in the form of pensions. The Group operates a number of pension schemes which may be funded or unfunded and of a defined contribution or defined benefit nature. In addition, the Group contributes, according to local law in the various countries in which it operates, to Governmental and other plans which have the characteristics of defined contribution plans.

For defined benefit schemes, actuarial valuation of each of the scheme's obligations using the projected unit credit method and the fair valuation of each of the scheme's assets are performed annually, using the assumptions set out in Note 30. The difference between the fair value of the plan assets and the present value of the defined benefit obligation at the balance sheet date, adjusted for any historic unrecognised actuarial gains or losses and past service cost, is recognised as a liability in the balance sheet. An asset, arising for example, as a result of past over funding or the performance of the plan investments, is recognised to the extent that it does not exceed the present value of future contribution holidays or refunds of contributions.

Cumulative actuarial gains and losses in excess of the greater of 10% of the assets or 10% of the obligations of the plan are recognised in the income statement over the remaining average service lives of the employees of the related plan, on a straight-line basis.

For defined contribution schemes, the Group recognises contributions due in respect of the accounting period in the income statement. Any contributions unpaid at the balance sheet date are included as a liability.

The Group also provides health care to certain retired employees, which are accrued as a liability in the financial statements over the period of employment, using a methodology similar to that for defined benefit pensions plans.

Short-term employee benefits, such as salaries, paid absences, and other benefits, are accounted for on an accruals basis over the period which employees have provided services in the year. Bonuses are recognised to the extent that the Group has a present obligation to its employees that can be measured reliably.

All expenses related to employee benefits are recognised in the income statement in staff costs, which is included within operating expenses.

22. Share-based payments to employees

The Group engages in equity settled share-based payment transactions in respect of services received from certain of its employees. The fair value of the services received is measured by reference to the fair value of the shares or share options granted on the date of the grant. The cost of the employee services received in respect of the shares or share options granted is recognised in the income statement over the period that the services are received, which is the vesting period. The fair value of the options granted is determined using option pricing models, which take into account the exercise price of the option, the current share price, the risk free interest rate, the expected volatility of the share price over the life of the option and other relevant factors. Except for those which include terms related to market conditions, vesting conditions included in the terms of the grant are not taken into account in estimating fair value. Non-market vesting conditions are taken into account by adjusting the number of shares or share options included in the measurement of the cost of employee services so that ultimately, the amount recognised in the income statement reflects the number of vested shares or share options. Where vesting conditions are related to market conditions, the charges for the services received are recognised regardless of whether or not the market related vesting condition is met, provided that the non-market vesting conditions are met.

23. Provisions

Provisions are recognised for present obligations arising as consequences of past events where it is more likely than not that a transfer of economic benefit will be necessary to settle the obligation, and it can be reliably estimated.

When a leasehold property ceases to be used in the business or a demonstrable commitment has been made to cease to use a property where the costs exceed the benefits of the property, provision is made, where the unavoidable costs of the future obligations relating to the lease are expected to exceed anticipated rental income and other benefits. The net costs are discounted using market rates of interest to reflect the long-term nature of the cash flows.

Provision is made for the anticipated cost of restructuring, including redundancy costs when an obligation exists. An obligation exists when the Group has a detailed formal plan for restructuring a business and has raised valid expectations in those affected by the restructuring by starting to implement the plan or announcing its main features. The provision raised is normally utilised within nine months.

Provision is made for undrawn loan commitments and similar facilities if it is probable that the facility will be drawn and result in the recognition of an asset at an amount less than the amount advanced.

Contingent liabilities are possible obligations whose existence will be confirmed only by uncertain future events or present obligations where the transfer of economic benefit is uncertain or cannot be reliably measured. Contingent liabilities are not recognised but are disclosed unless they are remote.

24. Taxes, including deferred taxes

Income tax payable on taxable profits ('current tax'), is recognised as an expense in the period in which the profits arise. Income tax recoverable on tax allowable losses is recognised as an asset only to the extent that it is regarded as recoverable by offset against current or future taxable profits.

Deferred income tax is provided in full, using the liability method, on temporary differences arising from the differences between the tax bases of assets and liabilities and their carrying amounts in the consolidated financial statements. Deferred income tax is determined using tax rates and legislation enacted or substantially enacted by the balance sheet date and is expected to apply when the deferred tax asset is realised or the deferred tax liability is settled. Deferred and current tax assets and liabilities are only offset when they arise in the same tax reporting group and where there is both the legal right and the intention to settle on a net basis or to realise the asset and settle the liability simultaneously.

25. Segment reporting

Operating segments are reported in a manner consistent with the internal reporting provided to the Executive Committee. The Executive Committee, which is responsible for allocating resources and assessing performance of the operating segments, has been identified as the chief operating decision maker.

All transactions between business segments are conducted on an arm's length basis, with intra-segment revenue and costs being eliminated in Head office. Income and expenses directly associated with each segment are included in determining business segment performance.

26. Cash and cash equivalents

For the purposes of the cash flow statement, cash comprises cash on hand and demand deposits, and cash equivalents comprise highly liquid investments that are convertible into cash with an insignificant risk of changes in value with original maturities of less than three months. Repurchase and reverse repurchase agreements are not considered to be part of cash equivalents.

27. Trust activities

The Group commonly acts as trustees and in other fiduciary capacities that result in the holding or placing of assets on behalf of individuals, trusts, retirement benefit plans and other institutions. These assets and income arising thereon are excluded from these financial statements, as they are not assets of the Group.

Accounting developments

Changes in accounting policy

The adoption of IFRSs and IFRICs in 2008 has resulted in no significant changes to the accounting policies except:

- a) IFRS 8 'Operating Segments' has been adopted as at 1st January 2008. IFRS 8 was issued in November 2006 and excluding early adoption would first be required to be applied to the Group's accounting period beginning on 1st January 2009. The standard replaces IAS 14 'Segmental Reporting' and aligns operating segmental reporting with segments reported to senior management as well as requiring amendments and additions to the existing segmental reporting disclosures as set out in Note 53. The standard does not change the recognition, measurement or disclosure of specific transactions in the consolidated financial statements.
- b) Certain financial assets originally classified as held for trading have been reclassified to loans and receivables on 16th December 2008 as set out in Note 51 on page 292. Following the amendment to IAS 39 in October 2008, a non-derivative financial asset held for trading may be transferred out of the fair value through profit or loss category after 1st July 2008 where:
 - In rare circumstances, it is no longer held for the purpose of selling or repurchasing in the near term; or
 - It is no longer held for the purpose of selling or repurchasing in the near term, it would have met the definition of a loan and receivable on initial classification and the Group has the intention and ability to hold it for the foreseeable future or until maturity.

Future accounting developments

Consideration will be given during 2009 to the implications, if any, of the following new and revised standards and International Financial Reporting Interpretations Committee (IFRIC) interpretations, as follows:

- IFRS 3 – Business Combinations and IAS 27 – Consolidated and Separate Financial Statements are revised standards issued in January 2008. The revised IFRS 3 applies prospectively to business combinations first accounted for in accounting periods beginning on or after 1st July 2009 and the amendments to IAS 27 apply retrospectively to periods beginning on or after 1st July 2009. The main changes in existing practice resulting from the revision to IFRS 3 affect acquisitions that are achieved in stages and acquisitions where less than 100% of the equity is acquired. In addition, acquisition related costs – such as fees paid to advisers – must be accounted for separately from the business combination, which means that they will be recognised as expenses unless they are directly connected with the issue of debt or equity securities. The revisions to IAS 27 specify that changes in a parent's ownership interest in a subsidiary that do not result in the loss of control must be accounted for as equity transactions. Until future acquisitions take place that are accounted for in accordance with the revised IFRS 3, the main impact on Barclays will be that, from 2010, gains and losses on transactions with non-controlling interests that do not result in loss of control will no longer be recognised in the income statement but directly in equity. In 2008, gains of £8m and losses of £2m were recognised in income relating to such transactions.
- IAS – 1 Presentation of Financial Statements is a revised standard applicable to annual periods beginning on 1st January 2009. The amendments affect the presentation of owner changes in equity and of comprehensive income. They do not change the recognition, measurement or disclosure of specific transactions and events required by other standards.
- An amendment to IFRS 2 Share-based Payment was issued in January 2008 that clarifies that vesting conditions are service conditions and performance conditions only. It also specifies that all cancellations, whether by the entity or by other parties, should receive the same accounting treatment, which results in the acceleration of charge. The Group is considering the implications of the amendment, particularly to the Sharesave scheme, and any resulting change in accounting policy would be accounted for in accordance with IAS 8 Accounting policies, changes in accounting estimates and errors in 2009.
- Amendments to IFRS 1 First-time Adoption of International Financial Reporting Standards and IAS 27 Consolidated and Separate Financial Statements – Cost of an Investment in a Subsidiary, Jointly Controlled Entity or Associate were issued in May 2008. The amendment to IFRS 1 has no impact on Barclays. The amendment to IAS 27 results in dividends received from subsidiaries being treated as income in the individual financial statements of the parent, whether paid from pre or post acquisition profits, and could affect the cost of investment in subsidiaries in certain group reconstructions. The amendments, which first apply to annual periods beginning on or after 1st January 2009, are not expected to affect group accounting policies.
- IAS 23 – Borrowing Costs is a revised standard applicable to annual periods beginning on 1st January 2009. The revision does not impact Barclays. The revision removes the option to not capitalise borrowing costs on qualifying assets, which are assets that take a substantial period of time to prepare for their intended use or sale.
- Amendments to IAS 32 – Financial Instruments: Presentation and IAS 1 – Presentation of Financial Statements were issued in February 2008 that require some puttable instruments and some financial instruments that impose on the entity an obligation to deliver to another party a pro rata share of the net assets of the entity only on liquidation to be classified as equity. The amendments, which are applicable to annual periods beginning on 1st January 2009, are not expected to have a material impact on Barclays.
- Eligible Hedged Items (an amendment to IAS 39 Financial Instruments: Recognition and Measurement) was issued in July 2008 and applies retrospectively for annual periods beginning on or after 1st July 2009. The amendment provides additional guidance where hedge accounting is to be obtained for a one sided risk in a hedged item or for inflation in a financial hedged item. No changes to accounting policies are expected as a result of the amendment.
- 'Improvements to IFRS' was issued in May 2008 and contains numerous amendments to IFRS which the IASB consider non-urgent but necessary. No changes to accounting policies are expected as a result of these amendments.

The following IFRIC interpretations issued during 2007 or 2008 which first apply to accounting periods beginning on or after 1st January 2009 are not expected to result in any changes to the Group's accounting policies:

- IFRIC 13 – Customer Loyalty Programs;
 - IFRIC 15 – Agreements for the Construction of Real Estate;
 - IFRIC 16 – Hedges of a Net Investment in a Foreign Operation; and
 - IFRIC 17 – Distribution of Non-cash assets to owners.
- IFRIC 18 – Transfer of Assets from Customers, was issued in January 2009 and applies prospectively to transfers of assets from customers received on or after 1st July 2009. This interpretation is not expected to result in any changes to the Group's accounting policies.

Acquisitions

2008

On 31st March 2008, Barclays completed the acquisition of Discover Financial Services' UK credit card business, Goldfish. Discover Financial Services is a leading credit card issuer and electronic payment services company.

On 1st July 2008, Barclays acquired 100% of the ordinary shares of Expobank. Expobank is based in Moscow and its main products and services are issuance and servicing of debit and credit cards, mortgages and loans, currency transactions, internet-banking; retail discount cards and other services.

On 22nd September 2008, Barclays completed the acquisition of Lehman Brothers North American businesses. The Lehman Brothers North American businesses include Lehman Brothers North American fixed income and equities sales, trading and research and investment banking businesses, Lehman Brothers New York Head Office at 745 Seventh Avenue and two data centres in New Jersey.

On 6th November 2008, Barclays purchased the Italian residential mortgage business of Macquarie Bank Limited. The acquired business includes a mortgage portfolio with a total outstanding balance of approximately €1.1 billion, as well as Macquarie's operational support functions, including staff.

2007

On 8th February 2007, Barclays completed the acquisition of Indexchange Investment AG. Indexchange is based in Munich and offers exchange traded fund products.

On 28th February 2007, Barclays completed the acquisition of Nile Bank Limited. Nile Bank is based in Uganda with 18 branches and 228 employees.

On 30th March 2007, Barclays completed the acquisition of EquiFirst. EquiFirst is a non-prime wholesale mortgage originator in the United States.

On 18th May 2007, Barclays completed the acquisition of Walbrook Group Limited. Walbrook is based in Jersey, Guernsey, Isle of Man and Hong Kong where it serves high net worth private clients and corporate customers.

2006

On 1st November 2006, Barclays Bank PLC acquired the US mortgage servicing business of HomEq Servicing Corporation from Wachovia Corporation.

Disposals

2008

On 31st October 2008 Barclays completed the sale of Barclays Life Assurance Company Ltd to Swiss Reinsurance Company.

2007

On 4th April 2007, Barclays completed the sale of part of Monument, a credit card business.

On 24th September 2007, Barclays completed the sale of a 50% shareholding in Intelnet Global Services Pvt Ltd.

2006

On 1st January 2006, Barclays completed the sale of the Barclays South African branch business to Absa Group Limited. This consists of the Barclays Capital South African operations and Corporate and Business Banking activities previously carried out by the South African branch of Global Retail and Commercial Banking, together with the associated assets and liabilities.

On 25th July 2006, Barclays Asset & Sales Finance (BASF) disposed of its interest in its motor vehicle contract hire business, Appleyard Finance Holdings Limited.

On 31st August 2006, Barclays disposed of Bankhaus Wolbern which was formerly part of Absa.

On 22nd December 2006 Barclays disposed of its interest in FirstCaribbean International Bank to Canadian Imperial Bank of Commerce.

On 31st December 2006, BASF disposed of its European Vendor Finance business, including Barclays Industrie Bank GmbH and Barclays Technology Finance Ltd, to CIT Group.

Recent developments

On 2nd February 2009, Barclays completed the acquisition of PT Bank Akita, which was announced initially on 17th September 2008, following the approval of the Central Bank of Indonesia.

On 17th February 2009, Barclays announced that Barclays Capital will discontinue operations at its EquiFirst subsidiary due to the market environment and strategic direction of the Group.

Interest received	7	4	4

The parent company's main activity is to hold the investment in its wholly-owned subsidiary, Barclays Bank PLC.

The Company was not exposed at 31st December 2008 or 2007 to significant risks arising from the financial instruments it holds; which comprised cash, balances with central banks, and other assets which had no credit or market risk.

Dividends received are treated as operating income.

Non-cash transactions

During the year Barclays Bank PLC issued £4,050m of Mandatorily Convertible Notes, which mandatorily convert into ordinary shares of Barclays PLC on or before 30th June 2009. Barclays PLC has the right to receive the Notes in the future; the fair value of which has been included in other assets, with a corresponding increase net of issue costs in other equity.

The accompanying notes form an integral part of the accounts.

Notes to the accounts

For the year ended 31st December 2008

1 Dividends per share

As announced on 13th October 2008, the Board of Barclays has concluded that it would not be appropriate to recommend the payment of a final dividend for 2008. The final dividend for 2007 of £1,485m is accounted for in shareholders' equity as an appropriation of retained profits in the year ending 31st December 2008.

2 Net interest income

	2008 £m	2007 £m	2006 £m
Cash and balances with central banks	174	145	91
Available for sale investments	2,355	2,580	2,811
Loans and advances to banks	1,267	1,416	903
Loans and advances to customers	23,754	19,559	16,290
Other	460	1,608	1,710
Interest income	28,010	25,308	21,805
Deposits from banks	(2,189)	(2,720)	(2,819)
Customer accounts	(6,697)	(4,110)	(3,076)
Debt securities in issue	(5,910)	(6,651)	(5,282)
Subordinated liabilities	(1,349)	(878)	(777)
Other	(396)	(1,339)	(708)
Interest expense	(16,541)	(15,698)	(12,662)
Net interest income	11,469	9,610	9,143

Interest income includes £135m (2007: £113m, 2006: £98m) accrued on impaired loans.

Other interest income principally includes interest income relating to reverse repurchase agreements. Similarly, other interest expense principally includes interest expense relating to repurchase agreements and hedging activity.

Included in net interest income is hedge ineffectiveness as detailed in Note 14.

3 Net fee and commission income

	2008 £m	2007 £m	2006 £m
Fee and commission income

Fee and commission expense	(1,082)	(970)	(828)
Net fee and commission income	8,407	7,708	7,177

4 Principal transactions

	2008 £m	2007 £m	2006 £m
Rates related business	4,751	4,162	2,848
Credit related business	(3,422)	(403)	766
Net trading income	1,329	3,759	3,614
Net gain from disposal of available for sale assets	212	560	307
Dividend income	196	26	15
Net gain from financial instruments designated at fair value	33	293	447
Other investment income	239	337	193
Net investment income	680	1,216	962
Principal transactions	2,009	4,975	4,576

Net trading income includes the profits and losses arising both on the purchase and sale of trading instruments and from the revaluation to fair value, together with the interest income earned from these instruments and the related funding cost.

Of the total net trading income, a £2,096m net loss (2007: £116m loss, 2006: £1,427m gain) was made on the purchase and sale of securities and the revaluation of both securities and derivatives. This included a £1,272m gain (2007: £640m, 2006: £480m) that was earned in foreign exchange dealings.

The net loss on financial assets designated at fair value included within principal transactions was £6,602m (2007: £78m gain, 2006: £489m gain) of which losses of £6,635m (2007: £215m loss, 2006: £42m gain) were included in net trading income and gains of £33m (2007: £293m, 2006: £447m) were included in net investment income.

The net gain on financial liabilities designated at fair value included within principal transactions was £3,328m (2007: £231m loss, 2006: £920m loss) all of which was included within net trading income.

Net trading income includes the net gain from widening of credit spreads relating to Barclays Capital issued structured notes held at fair value was £1,663m (2007: £658m, 2006: £nil).

5 Insurance premiums and insurance claims and benefits

	2008 £m	2007 £m	2006 £m
Gross premiums from insurance contracts	1,138	1,062	1,108
Premiums ceded to reinsurers	(48)	(51)	(48)
Net premiums from insurance contracts	1,090	1,011	1,060
	2008 £m	2007 £m	2006 £m
Gross claims and benefits incurred on insurance contracts	263	520	588
Reinsurers' share of claims incurred	(26)	(28)	(13)
Net claims and benefits incurred on insurance contracts	237	492	575

6 Other income

	2008 £m	2007 £m	2006 £m
(Decrease)/increase in fair value of assets held in respect of linked liabilities to customers under investment contracts	(10,422)	5,592	7,417
Decrease/(increase) in liabilities to customers under investment contracts	10,422	(5,592)	(7,417)
Property rentals	73	53	55
Other income	304	135	159
Other income	377	188	214

Included in other income are sub-lease rentals of £18m (2007: £18m, 2006: £18m), and in 2008 only is a £47m gain from the Visa IPO.

Notes to the accounts

For the year ended 31st December 2008

7 Impairment charges and other credit provisions

	2008 £m	2007 £m	2006 £m
Impairment charges on loans and advances			
– New and increased impairment allowances	5,116	2,871	2,722
– Releases	(358)	(338)	(389)
– Recoveries	(174)	(227)	(259)
Impairment charges on loans and advances	4,584	2,306	2,074
Charge/(release) in respect of provision for undrawn contractually committed facilities and guarantees provided	329	476	(6)
Impairment charges on loans and advances and other credit provisions	4,913	2,782	2,068
Impairment charges on reverse repurchase agreements	124	–	–
Impairment on available for sale assets	382	13	86
Impairment charges and other credit provisions	5,419	2,795	2,154

An analysis of the impairment charges by class of financial instrument is included in Note 47.

8 Staff costs

	2008 £m	2007 £m	2006 £m
Salaries and accrued incentive payments	6,273	6,993	6,635
Social security costs	464	508	502
Pension costs – defined contribution plans	237	141	128
Pension costs – defined benefit plans (Note 30)	89	150	282
Other post-retirement benefits (Note 30)	1	10	30
Other	715	603	592
Staff costs	7,779	8,405	8,169

Included in salaries and incentive payments is £257m (2007: £551m, 2006: £640m) arising from equity settled share-based payments, of which £23m (2007: £60m, 2006: £78m) is a charge related to options-based schemes. Also included is £3m (2007: £8m, 2006: £6m) arising from cash settled share-based payments.

The average number of persons employed by the Group worldwide during the year was 151,500 (2007: 128,900, 2006: 118,600).

9 Administration and general expenses

	2008 £m	2007 £m	2006 £m
Administrative expenses	5,153	3,978	3,980
Impairment charges/(releases)			
– property and equipment (Note 23)	33	2	14
– intangible assets (Note 22)	(3)	14	7
– goodwill (Note 21)	111	–	–
Operating lease rentals	520	414	345
Gain on property disposals	(148)	(267)	(432)
Administration and general expenses	5,666	4,141	3,914

Other	–	4	–	1	5
Total auditors' remuneration	28	5	6	5	44

The figures shown in the above table relate to fees paid to PricewaterhouseCoopers LLP and its associates. Fees paid to other auditors not associated with PricewaterhouseCoopers LLP in respect of the audit of the Company's subsidiaries were £3m (2007: £2m, 2006: £2m).

Fees payable for the audit of the Company's associates pursuant to legislation comprise the fees for the statutory audit of the subsidiaries and associated pension schemes both inside and outside Great Britain and fees for the work performed by the associates of PricewaterhouseCoopers LLP in respect of the consolidated financial statements of the Company. The fees relating to the audit of the associated pension schemes were £0.2m (2007: £0.3m, 2006: £0.3m).

Other services supplied pursuant to such legislation comprise services in relation to statutory and regulatory filings. These include audit services for the review of the interim financial information under the Listing Rules of the UK listing authority and fees paid for reporting under Section 404 of the US Sarbanes-Oxley Act (Section 404). In 2008 fees paid for reporting under section 404 are not separately identifiable from the fees of the audit of the Group's annual accounts and the Company's associates. In addition, other services include Section 404 advisory, reporting accountant work for capital raising, securitisations and services relating to acquisition activities.

Taxation services include compliance services such as tax return preparation and advisory services such as consultation on tax matters, tax advice relating to transactions and other tax planning and advice.

Services relating to corporate finance transactions comprise due diligence related to transactions and other work in connection with such transactions.

10 Tax

The charge for tax is based upon the UK corporation tax rate of 28.5% (2007: 30%, 2006: 30%) and comprises:

	2008 £m	2007 £m	2006 £m
Current tax charge/(credit)			
Current year	1,563	2,385	1,929
Adjustment for prior years	97	(11)	8
	1,660	2,374	1,937
Deferred tax (credit)/charge			
Current year	(597)	(367)	(16)
Adjustment for prior years	(273)	(26)	20
	(870)	(393)	4
Total charge/(credit)	790	1,981	1,941

Notes to the accounts

For the year ended 31st December 2008

10 Tax (continued)

The effective tax rate for the years 2008, 2007 and 2006 is lower than the standard rate of corporation tax in the UK of 28.5% (2007: 30%, 2006: 30%). The differences are set out below:

	2008 £m	2007 £m	2006 £m
Profit before tax	6,077	7,076	7,136
Tax charge at standard UK corporation tax rate of 28.5% (2007: 30%, 2006: 30%)	1,732	2,123	2,141
Adjustment for prior years	(176)	(37)	24
Differing overseas tax rates	215	(77)	(17)
Non-taxable gains and income (including amounts offset by unrecognised tax losses)	(833)	(136)	(393)
Share-based payments	229	72	27
Deferred tax assets not previously recognised	(514)	(158)	(4)
Change in tax rates	(1)	24	4
Other non-allowable expenses	138	170	159
Overall tax charge	790	1,981	1,941
Effective tax rate	13%	28%	27%

The effective rate of tax for 2008, based on profit before tax, was 13% (2007: 28%). The effective tax rate differs from the 2007 effective rate and the UK corporation tax rate of 28.5% principally due to the Lehman Brothers North American businesses acquisition. Under IFRS the gain on acquisition of £2,262m is calculated net of deferred tax liabilities included in the acquisition balance sheet and is thus not subject to further tax in calculating the tax charge for the year. Furthermore, Barclays has tax losses previously unrecognised as a deferred tax asset but capable of sheltering part of this deferred tax liability. This gives rise to a tax benefit of £492m which, in accordance with IAS 12, is included as a credit within the tax charge for the year. The effective rate has been adversely impacted by the effect of the fall in the Barclays share price on the deferred tax asset recognised on share awards. In common with prior years there have been offsetting adjustments relating to different overseas tax rates, disallowable expenditure and non taxable gains and income.

11 Earnings per share

	2008 £m	2007 £m	2006 £m
Profit attributable to equity holders of parent	4,382	4,417	4,571
Dilutive impact of convertible options	(24)	(25)	(30)
Profit attributable to equity holders of parent including dilutive impact of convertible options	4,358	4,392	4,541

	2008 million	2007 million	2006 million
Basic weighted average number of shares in issue	7,389	6,410	6,357
Number of potential ordinary shares	188	177	150
Diluted weighted average number of shares	7,577	6,587	6,507

	p	p	p
Basic earnings per share	59.3	68.9	71.9
Diluted earnings per share	57.5	66.7	69.8

The calculation of basic earnings per share is based on the profit attributable to equity holders of the parent and the number of basic weighted average number of shares excluding own shares held in employee benefits trusts and shares held for trading.

The basic and diluted weighted average number of shares in issue in the year ended 31st December 2008 reflects 1,802 million shares issued during the year and the 2,642 million shares that will be issued following conversion in full of the Mandatorily Convertible Notes, included from the date of issue and the date the contract was entered into respectively. As a result, the weighted average number of shares in issue in the year ended 31st December 2008 was increased by 1,034 million shares as a result of this increase.

When calculating the diluted earnings per share, the profit attributable to equity holders of the parent is adjusted for the conversion of outstanding options into shares within Absa Group Limited and Barclays Global Investors UK Holdings Limited. The weighted average number of ordinary shares excluding own shares held in employee benefit trusts and shares held for trading, is adjusted for the effects of all dilutive potential ordinary shares, totalling 188 million (2007: 177 million, 2006: 150 million).

Of the total number of employee share options and share awards at 31st December 2008, 64 million were anti-dilutive (2007: nil, 2006: 5 million).

Subsequent to the balance sheet date, the Group continued to make on-market purchases of treasury shares under its various employee share schemes. No adjustment has been made to earnings per share in respect of these purchases.

12 Trading portfolio

	2008 £m	2007 £m
Trading portfolio assets		
Treasury and other eligible bills	4,544	2,094
Debt securities	148,686	152,778
Equity securities	30,535	36,307
Traded loans	1,070	1,780
Commodities	802	732
Trading portfolio assets	185,637	193,691
Trading portfolio liabilities		
Treasury and other eligible bills	(79)	(486)
Debt securities	(44,309)	(50,506)
Equity securities	(14,919)	(13,702)
Commodities	(167)	(708)
Trading portfolio liabilities	(59,474)	(65,402)

13 Financial assets designated at fair value

Held on own account

	2008 £m	2007 £m
Loans and advances	30,187	23,491
Debt securities	8,628	24,217
Equity securities	6,496	5,376
Other financial assets	9,231	3,545
Financial assets designated at fair value – held on own account	54,542	56,629

The maximum exposure to credit risk on loans and advances designated at fair value at 31st December 2008 was £30,187m (2007: £23,491m). The amount by which related credit derivatives and similar instruments mitigate the exposure to credit risk at 31st December was £2,084m (2007: £2,605m).

The net loss attributable to changes in credit risk for loans and advances designated at fair value was £2,550m in 2008 (2007: £401m). The gains on related credit derivatives was £519m for the year (2007: £4m loss).

The cumulative net loss attributable to changes in credit risk for loans and advances designated at fair value since initial recognition is £2,149m at 31st December 2008 (2007: £401m). The cumulative change in fair value of related credit derivatives at 31st December 2008 is £523m (2007: £4m).

Held in respect of linked liabilities to customers under investment contracts/liabilities arising from investment contracts

	2008 £m	2007 £m
Financial assets designated at fair value held in respect of linked liabilities to customers under investment contracts	66,657	90,851
Cash and bank balances within the portfolio	2,526	1,788
Assets held in respect of linked liabilities to customers under investment contracts	69,183	92,639
Liabilities to customers under investment contracts	(69,183)	(92,639)

A portion of the Group's fund management business takes the legal form of investment contracts, under which legal title to the underlying investment is held by the Group, but the inherent risks and rewards in the investments are borne by the investors. In the normal course of business, the Group's financial interest in such investments is restricted to fees for investment management services.

Due to the nature of these contracts, the carrying value of the assets is always the same as the value of the liabilities and any change in the value of the assets results in an equal but opposite change in the value of the amounts due to the policyholders.

The Group is therefore not exposed to the financial risks – market risk, credit risk and liquidity risk – inherent in the investments and they are omitted from the disclosures on financial risks in Notes 47 to 49.

In the balance sheet, the assets are included as 'Financial assets designated at fair value – held in respect of linked liabilities to customers under investment contracts'. Cash balances within the portfolio have been included in the Group's cash balances. The associated obligation to deliver the value of the investments to customers at their fair value on balance sheet date is included as 'Liabilities to customers under investment contracts'.

The increase/decrease in the value arising from the return on the investments and the corresponding increase/decrease in linked liabilities to customers is included in the Other income note in Note 6.

Notes to the accounts

For the year ended 31st December 2008

14 Derivative financial instruments

The Group's objectives and policies on managing the risks that arise in connection with derivatives, including the policies for hedging, are included in Note 46 to Note 49.

The fair values and notional amounts of derivative instruments held for trading are set out in the following table:

Year ended 31st December Derivatives held for trading	2008			2007

14 Derivative financial instruments (continued)

The fair values and notional amounts of derivative instruments held for risk management are set out in the following table:

Year ended 31st December						
Derivatives held for risk management						
	Notional contract amount £m	2008		Notional contract amount £m	2007	
		Fair value			Fair value	
		Assets £m	Liabilities £m		Assets £m	Liabilities £m
Derivatives designated as cash flow hedges						
Currency swaps	586	–	(271)	–	–	–
Interest rate swaps	60,669	1,013	(1,011)	38,453	239	(437)
Equity options	400	–	(154)	54	41	–
Forward foreign exchange	1,871	309	(354)	2,256	178	–
Exchange traded interest rate swaps	20,028	–	–	14,529	–	–
Derivatives designated as cash flow hedges	83,554	1,322	(1,790)	55,292	458	(437)
Derivatives designated as fair value hedges						
Currency swaps	2,666	283	(105)	4,299	81	(75)
Interest rate swaps	14,010	1,052	(357)	18,450	323	(195)
Equity options	259	124	(110)	1,203	58	(58)
Exchange traded interest rate swaps	18,767	–	–	–	–	–
Derivatives designated as fair value hedges	35,702	1,459	(572)	23,952	462	(328)
Derivatives designated as hedges of net investments						
Forward foreign exchange	2,019	4	(76)	4,223	31	(57)
Currency swaps	3,675	21	(1,563)	8,397	187	(88)
Derivatives designated as hedges of net investment	5,694	25	(1,639)	12,620	218	(145)
Derivative assets/(liabilities) held for risk management	124,950	2,806	(4,001)	91,864	1,138	(910)

Interest rate derivatives, designated as cash flow hedges, primarily hedge the exposure to cash flow variability from interest rates of variable rate loans to banks and customers, variable rate debt securities held and highly probable forecast financing transactions and reinvestments.

Interest rate derivatives designated as fair value hedges primarily hedge the interest rate risk of fixed rate borrowings in issue, fixed rate loans to banks and customers and investments in fixed rate debt securities held.

Currency derivatives are primarily designated as hedges of the foreign currency risk of net investments in foreign operations.

The Group's total derivative asset and liability position as reported on the balance sheet is as follows:

Year ended 31st December						
	Notional contract amount £m	2008		Notional contract amount £m	2007	
		Fair value			Fair value	
		Assets £m	Liabilities £m		Assets £m	Liabilities £m

Total derivative assets/(liabilities) held for risk management	124,950	2,806	(4,001)	91,864	1,138	(910)
Derivative assets/(liabilities)	45,865,732	984,802	(968,072)	29,291,759	248,088	(248,288)

Derivative assets and liabilities subject to counterparty netting agreements amounted to £862bn (2007: £199bn). Additionally, the Group held £55bn (2007: £17bn) of collateral against the net derivative assets exposure.

Notes to the accounts

For the year ended 31st December 2008

14 Derivative financial instruments (continued)

The Group has hedged the following forecast cash flows, which primarily vary with interest rates. These cash flows are expected to impact the income statement in the following periods, excluding any hedge adjustments that may be applied:

	2008						
	Total £m	Up to one year £m	Between one to two years £m	Between two to three years £m	Between three to four years £m	Between four to five years £m	More than five years £m
Forecast receivable cash flows	2,569	875	586	596	347	127	38
Forecast payable cash flows	974	275	166	175	145	123	90

	2007						
	Total £m	Up to one year £m	Between one to two years £m	Between two to three years £m	Between three to four years £m	Between four to five years £m	More than five years £m
Forecast receivable cash flows	4,329	1,593	987	903	535	254	57
Forecast payable cash flows	2,121	394	369	335	283	244	496

The maximum length of time over which the Group hedges exposure to the variability in future cash flows for forecast transactions, excluding those forecast transactions related to the payment of variable interest on existing financial instruments, is seven years (2007: ten years).

All gains or losses on hedging derivatives relating to forecast transactions, which are no longer expected to occur, have been recycled to the income statement.

A gain of £2,439m on hedging instruments was recognised in relation to fair value hedges in net interest income (2007: £66m loss). A loss of £2,423m on the hedged items was recognised in relation to fair value hedges in net interest income (2007: £70m gain).

Ineffectiveness recognised in relation to cash flow hedges in net interest income was a gain of £14m (2007: £21m). Ineffectiveness recognised in relation to hedges of net investment was a gain of £2m (2007: £4m).

15 Loans and advances to banks and customers

	2008 £m	2007 £m
Gross loans and advances to banks	47,758	40,123
Less: Allowance for impairment	(51)	(3)
Loans and advances to banks	47,707	40,120
Gross loans and advances to customers	468,338	349,167
Less: Allowance for impairment	(6,523)	(3,769)
Loans and advances to customers	461,815	345,398

16 Available for sale financial investments

	2008 £m	2007 £m
Debt securities	58,831	38,673
Treasury bills and other eligible bills	4,003	2,723
Equity securities	2,142	1,676
Available for sale financial investments	64,976	43,072

	2008 £m	2007 £m
Movement in available for sale financial investments		
At beginning of year	43,072	51,703
Exchange and other adjustments	14,275	1,499
Acquisitions and transfers	59,703	26,920
Disposals (through sale and redemption)	(50,501)	(37,498)

At end of year	64,976	43,072

17 Securities borrowing, securities lending, repurchase and reverse repurchase agreements

Amounts included in the balance sheet and reported on a net basis where the Group has the intention and the legal ability to settle net or realise simultaneously were as follows:

(a) Reverse repurchase agreements and cash collateral on securities borrowed

Amounts advanced to counterparties under reverse repurchase agreements and cash collateral provided under stock borrowing agreements are treated as collateralised loans receivable. The related securities purchased or borrowed subject to an agreement with the counterparty to repurchase them are not recognised on balance sheet where the risks and rewards of ownership remain with the counterparty.

	2008 £m	2007 £m
Banks	55,471	86,710
Customers	74,883	96,365
Reverse repurchase agreements and cash collateral held on securities borrowed	130,354	183,075

(b) Repurchase agreements and cash collateral on securities lent

Securities that are not recorded on the balance sheet (for example, securities that have been obtained as a result of reverse repurchase and stock borrow transactions) may also be lent or sold subject to a commitment to repurchase – such securities remain off-balance sheet. In both instances, amounts received from counterparty are treated as liabilities, which at 31 st December were as follows:

	2008 £m	2007 £m
Banks	87,403	97,297
Customers	94,882	72,132
Repurchase agreements and cash collateral on securities lent	182,285	169,429

18 Other assets

	2008 £m	2007 £m
Sundry debtors	4,814	4,042
Prepayments	882	551
Accrued income	483	400
Reinsurance assets	123	157
Other assets	6,302	5,150

Included in the above are balances of £4,704m (2007: £3,859m) expected to be recovered within no more than 12 months after the balance sheet date; and balances of £1,598m (2007: £1,291m) expected to be recovered more than 12 months after the balance sheet date.

Other assets include £3,096m (2007: £3,966m) of receivables which meet the definition of financial assets.

Notes to the accounts

For the year ended 31st December 2008

19 Deferred tax

The components of deferred taxes disclosed on the balance sheet are as follows:

	2008 £m	2007 £m
Deferred tax liability	304	855
Deferred tax asset	2,668	1,463
Net deferred tax	2,364	608

Deferred taxes are calculated on all temporary differences under the liability method. The movement on the deferred tax account is as follows:

	Fixed asset timing differences £m	Available for sale investments £m	Cash flow hedges £m	Pensions and other retirement benefits £m	Allowance for impairment on loans £m	Other provisions £m	Tax losses carried forward £m	Share based payments £m	Other £m	Total £m

Assets	–	–	44	491	108	377	215	428	671	2,334
At 31st December 2007	(803)	(101)	(7)	491	108	377	215	428	(100)	608

The amount of deferred tax liability expected to be settled after more than 12 months is £1,949m (2007: £1,468m).

The amount of deferred tax asset expected to be recovered after more than 12 months is £4,593m (2007: £1,950m).

The deferred tax assets balance includes £2,139m (2007: £450m) which is the excess deferred tax assets over deferred tax liabilities in entities which have suffered a loss in either the current or prior year. This is based on management assessment that it is probable that the relevant entities will have taxable profits against which the temporary differences can be utilised.

Deferred tax assets have not been recognised in respect of deductible temporary differences (gross) £9m (2007: £247m), unused tax losses (gross) of £4,083m (2007: £1,683m) and unused tax credits of £46m (2007: £126m). The following tax losses expire: £3,854m in 2028. The other tax losses, tax credits and temporary differences do not expire under current tax legislation. Deferred tax assets have not been recognised in respect of these items because it is not probable that future taxable profit will be available against which the Group can utilise benefits. The unused tax losses include amounts relating to non-UK branches of Barclays Bank PLC where the future tax benefit might be restricted to the amount in excess of the UK rate.

The amount of temporary differences associated with investments in subsidiaries, branches, associates and joint ventures for which deferred tax liabilities have not been recognised is £8,429m (2007: £5,722m).

20 Investments in associates and joint ventures

The Group has investments in two associates listed on the Johannesburg Stock Exchange. The fair value of the Group's investment in Ambit Properties Limited is £51 m (2007: £42m) and in Pinnacle Point Group Limited, acquired during 2008, is £60m.

Acquisitions of joint ventures and associates

During the year the Group made additional investments in associates and joint ventures for aggregate cash consideration of £96m (2007: £221m), including new associates and joint ventures amounting to £63m (2007: £206m) primarily relating to Pinnacle Point Group Limited.

Summarised financial information for the Group's associates and joint ventures is set out below:

	2008		2007	
	Associates £m	Joint ventures £m	Associates £m	Joint ventures £m
Property, plant and equipment	788	104	588	632
Financial investments	124	–	239	8
Loans to banks and customers	271	2,883	516	2,372

Total assets	2,526	3,405	2,730	3,326
Deposits from banks and customers	1,376	2,207	1,515	2,189
Other liabilities	985	890	902	458
Shareholders' equity	165	308	313	679
Total liabilities	2,526	3,405	2,730	3,326
Net income	859	357	528	340
Operating expenses	(732)	(364)	(404)	(292)
Profit/(loss) before tax	127	(7)	124	48
Profit/(loss) after tax	52	(11)	104	40

The amounts included above, which include the entire assets, liabilities and net income of the investees, not just the Group's share, are based on accounts made up to 31st December 2008 with the exception of certain undertakings for which the amounts are based on accounts made up to dates not earlier than three months before the balance sheet date.

Associates and joint ventures in 2008 includes £1,651 m (2007: £1,728m) of assets, £1,525m (2007: £1,537m) of liabilities and £9m (2007: £18m) of profit after tax in associates and joint ventures within the Absa Group.

The Group's share of commitments and contingencies of its associates and joint ventures is £nil (2007: £6m).

Notes to the accounts

For the year ended 31st December 2008

21 Goodwill

	2008 £m	2007 £m
Net book value		
At beginning of year	7,014	6,092
Acquisitions	400	879
Disposals	(10)	(17)
Impairment charge	(111)	–
Exchange and other adjustments	332	60
At end of year	7,625	7,014

Goodwill is allocated to business operations according to business segments identified by the Group under IFRS 8, as follows:

	2008 £m	2007 £m
UK Retail Banking	3,139	3,138
Barclays Commercial Bank	10	9
Barclaycard	413	408
GRCB – Western Europe	705	551
GRCB – Emerging Markets	292	45
GRCB – Absa	1,084	1,062
Barclays Capital	95	147
Barclays Global Investors	1,496	1,261
Barclays Wealth	391	393
Goodwill	7,625	7,014

Goodwill is reviewed annually for impairment, or more frequently when there are indicators that impairment may have occurred, by comparing the carrying value to its recoverable amount.

Impairment testing of goodwill

The recoverable amount of each operation's goodwill is based on value-in-use or fair value less costs to sell calculations. The calculations are based upon discounting expected pre-tax cash flows at a risk adjusted interest rate appropriate to the cash generating unit, the determination of both of which requires the exercise of judgement. The estimation of pre-tax cash flows is sensitive to the periods for which forecasts are available and to assumptions regarding the long-term sustainable cash flows. While forecasts are compared with actual performance and external economic data, expected cash flows naturally reflect management's view of future performance.

At 31st December 2008, the goodwill allocated to UK Retail Banking was £3,139m (2007: £3,138m) including £3,130m (2007: £3,130m) relating to Woolwich, the goodwill allocated to GRCB – Absa was £1,084m (2007: £1,062m) and the goodwill allocated to Barclays Global Investors was £1,496m (2007: £1,261m). The remaining aggregate of goodwill of £1,915m (2007: £1,561m) consists of balances relating to multiple business operations which are not considered individually significant.

Goodwill impairment of £111m (2007: £nil) reflects the full write-down of £74m relating to EquiFirst, a US non-prime mortgage originator and a partial write-down of £37m relating to FirstPlus following its closure to new business in August 2008.

Key assumptions used in impairment testing for significant goodwill

UK Retail Banking

The recoverable amount of UK Retail Banking has been determined based on a value in use calculation. The calculation uses cash flow projections based on financial budgets approved by management covering a three year period, and a discount rate of 17.48%. For the purposes of the calculations, cash flows beyond that period have been extrapolated using a steady 3% growth rate. The growth rate does not exceed the long-term average growth rate for the market in which UK Retail Banking operates. Management believes that any reasonable possible change in the key assumptions on which UK Retail Banking's recoverable amount is based would not cause its carrying amount to exceed its recoverable amount.

Global Retail and Commercial Banking – Absa

The recoverable amount of GRCB – Absa has been determined based on a value in use calculation. The calculation uses cash flow projections based on financial budgets approved by management covering a three year period, and a discount rate of 14.10%. For the purposes of the calculations, cash flows beyond that period have been extrapolated using a growth rate of 8% to cash flows for the two years 2012 to 2013, and a rate of 6% for the ten years 2014 to 2023. The growth rate does not exceed the long-term average growth rate for the market in which GRCB – Absa operates. Management believes that any reasonable possible change in the key assumptions on which GRCB – Absa's recoverable amount is based would not cause its carrying amount to exceed its recoverable amount.

Barclays Global Investors

The recoverable amount of BGI has been determined based on a fair value methodology approach which includes both a discounted cash flow valuation and comparable company valuation multiples based on revenue, EBITDA and assets under management. The calculation uses earnings projections based on financial budgets approved by management covering a three year period and a discount rate of 11.5%. For the purposes of the calculations, cash flows beyond that period have been extrapolated using growth rates of between 2% and 11% for cash flows from 2012 to 2017, and a terminal growth factor of 4% for 2018 and beyond. The growth rate does not exceed the long-term average growth rate for the market in which BGI operates. Management believes that any reasonable possible change in the key assumptions on which BGI's recoverable amount is based would not cause its carrying amount to exceed its recoverable amount.

Net book value	2,613	1,800	261	4,674	1,407	1,191	398	2,996

Operating leased assets represent assets such as plant and equipment leased to customers under operating leases.

Certain of the Group's equipment is held on finance leases. See Note 37.

24 Financial liabilities designated at fair value

	2008		2007	
	Fair value £m	Contractual amount due on maturity £m	Fair value £m	Contractual amount due on maturity £m
Debt securities	61,297	69,197	52,320	62,167
Deposits	10,518	10,109	17,319	18,140
Other	5,077	6,761	4,850	6,239
Financial liabilities designated at fair value	76,892	86,067	74,489	86,546

At 31st December 2008, the own credit adjustment arose from the fair valuation of £54.5bn of Barclays Capital structured notes (2007: £40.7bn). The widening of Barclays credit spreads in the year affected the fair value of these notes and as a result revaluation gains of £1,663m were recognised in trading income (2007: £658m).

25 Other liabilities

	2008 £m	2007 £m
Accruals and deferred income	6,495	6,075
Sundry creditors	6,049	4,341
Obligations under finance leases (Note 37)	96	83
Other liabilities	12,640	10,499

Included in the above are balances of £11,068m (2007: £9,043m) expected to be settled within no more than 12 months after the balance sheet date; and balances of £1,572m (2007: £1,456m) expected to be settled more than 12 months after the balance sheet date.

Accruals and deferred income included £nil (2007: £102m) in relation to deferred income from investment contracts and £nil (2007: £677m) in relation to deferred income from insurance contracts.

Notes to the accounts

For the year ended 31st December 2008

26 Insurance assets and liabilities

Insurance assets

Reinsurance assets are £123m (2007: £157m) and relate principally to the Group's long-term business. Reinsurers' share of provisions relating to the Group's short-term business are £32m (2007: £94m). The reinsurance assets expected to be recovered after more than one year are £91m (2007: £63m).

Insurance contract liabilities including unit-linked liabilities

Insurance liabilities comprise the following:

	2008 £m	2007 £m
Insurance contract liabilities:		
– linked liabilities	125	1,398
– non-linked liabilities	1,908	2,347
Provision for claims	119	158
Insurance contract liabilities including unit-linked liabilities	2,152	3,903

Insurance contract liabilities relate principally to the Group's long-term business. Insurance contract liabilities associated with the Group's short-term non-life business are £73m (2007: £174m).

Movements in insurance liabilities and reinsurance assets

Movements in insurance assets and insurance contract liabilities were as follows:

	2008			2007		
	Gross £m	Reinsurance £m	Net £m	Gross £m	Reinsurance £m	Net £m
At beginning of year	3,903	(157)	3,746	3,878	(172)	3,706
Change in year	(1,751)	34	(1,717)	25	15	40
At end of year	2,152	(123)	2,029	3,903	(157)	3,746

Assumptions used to measure insurance liabilities

The assumptions that have the greatest effect on the measurement of the amounts recognised above, and the processes used to determine them were as follows:

Long-term business – linked and non-linked

Mortality – mortality estimates are based on standard industry and national mortality tables, adjusted where appropriate to reflect the Group's own experience. A margin is added to ensure prudence – for example, future mortality improvements for annuity business.

Renewal expenses level and inflation – expense reserves are a small part of overall insurance liabilities, however, increases in expenses caused by unanticipated inflation or other unforeseen factors could lead to expense reserve increases. Expenses are therefore set using prudent assumptions. Initial renewal expense levels are set by considering expense forecasts for the business and, where appropriate, building in a margin to allow for the increasing burden of fixed costs on the UK closed life book of business. The inflation assumption is set by adding a margin to the market rate of inflation implied by index-linked gilt yields.

Short-term business

Short-term business – for single premium policies the proportion of unearned premiums is calculated based on estimates of the frequency and severity of incidents.

Changes in assumptions

There have been no changes in assumptions in 2008 that have had a material effect on the financial statements.

Uncertainties associated with cash flows related to insurance contracts and risk management activities

Long-term insurance contracts (linked and non-linked)

For long-term insurance contracts where death is the insured risk, the most significant factors that could detrimentally affect the frequency and severity of claims are the incidence of disease, such as AIDS, or general changes in lifestyle, such as in eating, exercise and smoking. Where survival is the insured risk, advances in medical care and social conditions are the key factors that increase longevity.

The Group manages its exposure to risk by operating in part as a unit-linked business, prudent product design, applying strict underwriting criteria, transferring risk to reinsurers, managing claims and establishing prudent reserves.

Short-term insurance contracts

For payment protection contracts where inability to make payments under a loan contract is the insured risk, the most significant factors are the health of the policyholder and the possibility of unemployment which depends upon, among other things, long-term and short-term economic factors. The Group manages its exposure to such risks through prudent product design, efficient claims management, prudent reserving methodologies and bases, regular product, economic and market reviews and regular adequacy tests on the size of the reserves.

Absa insures property and motor vehicles, for which the most significant factors that could effect the frequency and severity of claims are climatic change and crime. Absa manages its exposure to risk by diversifying insurance risks accepted and transferring risk to reinsurers.

26 Insurance assets and liabilities (continued)

Sensitivity analysis

The following table presents the sensitivity of the level of insurance contract liabilities disclosed in this note to movements in the actuarial assumptions used to calculate them. The percentage change in variable is applied to a range of existing actuarial modelling assumptions to derive the possible impact on net profit after tax. The disclosure is not intended to explain the impact of a percentage change in the insurance assets and liabilities disclosed above.

	2008		2007	
	Change in variable %	Net profit after tax impact £m	Change in variable %	Net profit after tax impact £m
Long-term insurance contracts:				
Improving mortality (annuitants only)	10	1	10	21
Worsening of mortality (assured lives only)	10	20	10	29
Worsening of base renewal expense level	20	19	20	43
Worsening of expense inflation rate	10	1	10	10
Short-term insurance contracts:				
Worsening of claim expense assumptions	10	3	10	3

Any change in net profit after tax would result in a corresponding increase or decrease in shareholders' equity.

The above analyses are based on a change in a single assumption while holding all other assumptions constant. In practice this is unlikely to occur.

Options and guarantees

The Group's contracts do not contain options or guarantees that could confer material risk.

Concentration of insurance risk

The Group considers that the concentration of insurance risk that is most relevant to the Group financial statements is according to the type of cover offered and the location of insured risk. The following table shows the maximum amounts payable under all of the Group's insurance products. It ignores the probability of insured events occurring and the contribution from investments backing the insurance policies. The table shows the broad product types and the location of the insured risk, before and after the impact of reinsurance that represents the risk that is passed to other insurers.

	2008			2007		
	Before Reinsurance £m	Reinsurance £m	After Reinsurance £m	Before Reinsurance £m	Reinsurance £m	After Reinsurance £m
Total benefits insured by product type						
Long-term insurance contracts	19,193	(3,591)	15,602	31,205	(10,497)	20,708
Short-term insurance contracts	36,228	(2,735)	33,493	31,464	(1,139)	30,325
Total benefits insured	55,421	(6,326)	49,095	62,669	(11,636)	51,033

	2008			2007		
	Before Reinsurance £m	Reinsurance £m	After Reinsurance £m	Before Reinsurance £m	Reinsurance £m	After Reinsurance £m
Total benefits insured by geographic location						
United Kingdom	8,120	(525)	7,595	22,538	(7,473)	15,065
Other European Union	6,519	(2,305)	4,214	4,304	(2,479)	1,825
Africa	40,782	(3,496)	37,286	35,827	(1,684)	34,143
Total benefits insured	55,421	(6,326)	49,095	62,669	(11,636)	51,033

Reinsurer credit risk

For the long-term business, reinsurance programmes are in place to restrict the amount of cover on any single life. The reinsurance cover is spread across highly rated companies to diversify the risk of reinsurer solvency. Net insurance reserves include a margin to reflect reinsurer credit risk.

Notes to the accounts

For the year ended 31st December 2008

27 Subordinated liabilities

Subordinated liabilities comprise dated and undated loan capital as follows:

		2008 £m	2007 £m
Undated loan capital	(a)	13,673	6,631
Dated loan capital	(b)	16,169	11,519
		29,842	18,150

Undated loan capital – non-convertible		13,673	6,631

Security and subordination

None of the undated loan capital of the Bank is secured.

The Junior Undated Floating Rate Notes (the 'Junior Notes') rank behind the claims against the Bank of depositors and other unsecured unsubordinated creditors and holders of dated loan capital.

All other issues of the Bank's undated loan capital rank pari passu with each other and behind the claims of the holders of the Junior Notes, except for the 6% and 6.86% Callable Perpetual Core Tier One Notes (the 'TONs') and the 5.3304%, 5.926%, 6.3688%, 7.434% and 14% Step-up Callable Perpetual Reserve Capital Instruments (the 'RCIs') (such issues, excluding the TONs and the RCIs, being the 'Undated Notes and Loans').

The TONs and the RCIs rank pari passu with each other and behind the claims of the holders of the Undated Notes and Loans.

Interest

Notes

- These TONs bear a fixed rate of interest until 2032. After that date, in the event that the TONs are not redeemed, the TONs will bear interest at rates fixed periodically in advance, based on London interbank rates.
- These RCIs bear a fixed rate of interest until 2036. After that date, in the event that the RCIs are not redeemed, the RCIs will bear interest at rates fixed periodically in advance, based on London interbank rates.
- These RCIs bear a fixed rate of interest until 2016. After that date, in the event that the RCIs are not redeemed, the RCIs will bear interest at rates fixed periodically in advance, based on London interbank rates.
- These Notes bear interest at rates fixed periodically in advance, based on London interbank rates.
- These RCIs bear a fixed rate of interest until 2019. After that date, in the event that the RCIs are not redeemed, the RCIs will bear interest at rates fixed periodically in advance, based on London interbank rates.
- These Bonds bear a fixed rate of interest until 2021. After that date, in the event that the Bonds are not redeemed, the coupon will be reset to a fixed margin over a reference gilt rate for a further period of five years.
- The interest rate on these Bonds is fixed for the life of this issue.
- These Notes bear a fixed rate of interest until 2020. After that date, in the event that the Notes are not redeemed, the coupon will be reset to a fixed margin over a reference gilt rate for a further period of five years.
- These Notes bear a fixed rate of interest until 2015. After that date, in the event that the Notes are not redeemed, the coupon will be reset to a fixed margin over a reference gilt rate for a further period of five years.

27 Subordinated liabilities (continued)

- j These Notes bear a fixed rate of interest until 2017. After that date, in the event that the Notes are not redeemed, the coupon will be reset to a fixed margin over a reference gilt rate for a further period of five years.
- k These Notes bear a fixed rate of interest until 2027. After that date, in the event that the Notes are not redeemed, the coupon will be reset to a fixed margin over a reference gilt rate for a further period of five years.
- l These Notes bear a fixed rate of interest until 2009. After that date, in the event that the Notes are not redeemed, the Notes will bear interest at rates fixed periodically in advance based on European interbank rates.
- m These Loans bear a fixed rate of interest until 2028 based on a US Dollar principal amount, but the interest payments have been swapped, resulting in a Yen interest rate payable, which is fixed periodically in advance based on London interbank rates. After that date, in the event that the Loans are not redeemed, the Loans will bear Yen interest rates fixed periodically in advance, based on London interbank rates.
- n These RCIs bear a fixed rate of interest until 2019. After that date, in the event that the RCIs are not redeemed, the RCIs will bear interest at rates fixed periodically in advance, based on London interbank rates.
- o These RCIs bear a fixed rate of interest until 2017. After that date, in the event that the RCIs are not redeemed, the RCIs will bear interest at rates fixed periodically in advance, based on London interbank rates.
- p These Notes bear a fixed rate of interest until 2018. After that date, in the event that the Notes are not redeemed, the Notes will bear interest at rates fixed periodically in advance, based on London interbank rates.

The Bank is not obliged to make a payment of interest on its Undated Notes and Loans excluding the 9.25% Perpetual Subordinated Bonds, 7.7% Undated Subordinated Notes and 8.25% Undated Subordinated Notes if, in the preceding six months, a dividend has not been declared or paid on any class of shares of Barclays PLC or, in certain cases, any class of preference shares of the Bank. The Bank is not obliged to make a payment of interest on its 9.25% Perpetual Subordinated Bonds if, in the immediately preceding 12 months interest period, a dividend has not been paid on any class of its share capital. Interest not so paid becomes payable in each case if such a dividend is subsequently paid or in certain other circumstances. During the year, the Bank declared and paid dividends on its ordinary shares and on all classes of preference shares.

No payment of principal or any interest may be made unless the Bank satisfies a specified solvency test.

The Bank may elect to defer any payment of interest on the 7.7% Undated Subordinated Notes and 8.25% Undated Subordinated Notes. Until such time as any deferred interest has been paid in full, neither the Bank nor Barclays PLC may declare or pay a dividend, subject to certain exceptions, on any of its ordinary shares, preference shares, or other share capital or satisfy any payments of interest or coupons on certain other junior obligations.

The Bank may elect to defer any payment of interest on the RCIs (b, c, e, n and o above). Any such deferred payment of interest must be paid on the earlier of (i) the date of redemption of the RCIs, (ii) the coupon payment date falling on or nearest to the tenth anniversary of the date of deferral of such payment, and (iii) in respect of e above only, substitution. Whilst such deferral is continuing, neither the Bank nor Barclays PLC may declare or pay a dividend, subject to certain exceptions, on any of its ordinary shares or preference shares.

The Bank may elect to defer any payment of interest on the TONs if it determines that it is, or such payment would result in it being, in non-compliance with capital adequacy requirements and policies of the FSA. Any such deferred payment of interest will only be payable on a redemption of the TONs. Until such time as the Bank next makes a payment of interest on the TONs, neither the Bank nor Barclays PLC may (i) declare or pay a dividend, subject to certain exceptions, on any of their respective ordinary shares or Preference Shares, or make payments of interest in respect of the Bank's Reserve Capital Instruments and (ii) certain restrictions on the redemption, purchase or reduction of their respective share capital and certain other securities also apply.

Repayment

Notes

- q These TONs are repayable, at the option of the Bank, in whole on any coupon payment date falling in or after June 2032.
- r These RCIs are repayable, at the option of the Bank, in whole on any coupon payment date falling in or after December 2036.
- s These RCIs are repayable, at the option of the Bank, in whole on any coupon payment date falling in or after December 2016.
- t These RCIs are repayable, at the option of the Bank, in whole on any coupon payment date falling in or after June 2019.
- u These Notes are repayable, at the option of the Bank, in whole or in part on any interest payment date.
- v These Notes are repayable, at the option of the Bank, in whole on any interest payment date.
- w These Bonds are repayable, at the option of the Bank, in whole in 2021, or on any fifth anniversary thereafter.
- x These Bonds are repayable, at the option of the Bank, in whole at any time.
- y These Notes are repayable, at the option of the Bank, in whole in 2020, or on any fifth anniversary thereafter.
- z These Notes are repayable, at the option of the Bank, in whole in 2015, or on any fifth anniversary thereafter.
- aa These Notes are repayable, at the option of the Bank, in whole in 2017, or on any fifth anniversary thereafter.
- ab These Notes are repayable, at the option of the Bank, in whole in 2027, or on any fifth anniversary thereafter.
- ac These Notes are repayable, at the option of the Bank, in whole in 2009, or on any fifth anniversary thereafter.
- ad These Loans are repayable, at the option of the Bank, in whole in 2028, or on any fifth anniversary thereafter.
- ae These RCIs are repayable, at the option of the Bank, in whole on any coupon payment date falling in or after December 2019.
- af These RCIs are repayable, at the option of the Bank, in whole on any coupon payment date falling in or after December 2017.
- ag These Notes are repayable, at the option of the Bank, in whole on any interest payment date falling in or after December 2018.
- ah These Notes are repayable, at the option of the Bank, in whole on any interest payment date falling in or after April 2018.

In addition, each issue of undated loan capital is repayable, at the option of the Bank, in whole for certain tax reasons, either at any time, or on an interest payment date. There are no events of default except non-payment of principal or mandatory interest.

Any repayments require the prior notification to the FSA.

All issues of undated loan capital have been made in the eurocurrency market and/or under Rule 144A, and no issues have been registered under the US Securities Act of 1933.

Notes to the accounts

None of the Group's dated loan capital is secured. The debt obligations of the Bank, Barclays Spain, BBG, BBB, Barclays Zambia, Barclays Kenya and Absa rank ahead of the interests of holders of their equity. Dated loan capital of the Bank, Barclays Spain, BGC, BBB, Barclays Zambia, Barclays Kenya and Absa has been issued on the basis that the claims there under are subordinated to the respective claims of their depositors and other unsecured unsubordinated creditors.

Interest

Notes

- a The interest rates on these Notes are fixed for the life of those issues.
- b These Notes bear interest at rates fixed periodically in advance based on London or European interbank rates.
- c These Notes bear a fixed rate of interest until 2009. After that date, in the event that the Notes are not redeemed, the coupon will be reset to a fixed margin over a reference rate for a further period of five years.
- d These Notes bear a fixed rate of interest until 2010. After that date, in the event that the Notes are not redeemed, the Notes will bear interest at rates fixed periodically in advance based on Johannesburg interbank acceptance rates.
- e These Notes bear interest at rates fixed periodically in advance based on Johannesburg interbank acceptance rates.
- f These Notes bear a fixed rate of interest until 2012. After that date, in the event that the Notes are not redeemed, the Notes will bear interest at rates fixed periodically in advance based on Johannesburg interbank acceptance rates.
- g These Notes bear a fixed rate of interest until 2015. After that date, in the event that the Notes are not redeemed, the Notes will bear interest at rates fixed periodically in advance based on Johannesburg interbank acceptance rates.
- h These Notes bear a fixed rate of interest until 2012. After that date, in the event that the Notes are not redeemed, the coupon will be reset to a fixed margin over a reference gilt rate for a further period of five years.
- i These Notes bear a fixed rate of interest until 2014. After that date, in the event that the Notes are not redeemed, the Notes will bear interest at rates fixed periodically in advance based on European interbank rates.
- j This Loan bears a fixed rate of interest based on a US Dollar principal amount, but the interest payments have been swapped, resulting in a Yen interest rate payable which is fixed periodically in advance based on London interbank rates.
- k Repayable at the option of the issuer, prior to maturity, on conditions governing the respective debt obligations, some in whole or in part, and some only in whole.
- l These Notes bear interest at rates fixed periodically in advance based on the Bank of Botswana Certificate Rate. All of these Notes will be compulsorily converted to Preference Shares of BBB, having a total par value equal in sum to the principal amount of Notes outstanding at the time of conversion, should BBB experience pre-tax losses in excess of its retained earnings and other capital surplus accounts.
- m These Notes bear interest at rates fixed periodically in advance based on the Bank of Zambia Treasury Bill rate. All of these Notes will be compulsorily converted to Preference Shares of Barclays Zambia, having a total par value equal in sum to the principal amount of Notes outstanding at the time of conversion, should Barclays Zambia experience pre-tax losses in excess of its retained earnings and other capital surplus accounts.
- n The dividends are compounded and payable semi-annually in arrears on 30th September and 31st March of each year. The shares were issued by Absa Group Limited on 1st July 2004 and the redemption dates commence on the first business day after the third anniversary of the date of issue of the redeemable preference shares and ending on the fifth anniversary of the date of issue. Such exercise and notice will be deemed to be effective only on the option exercise dates, being 1st March, 1st June, 1st September or 1st December of each year. The shares are convertible into ordinary shares at the option of the preference shareholders on the redemption dates in lots of 100.
- o These Notes bear a fixed rate of interest until 2018. After that date in the event that the Notes are not redeemed, the Notes will bear interest at rates fixed periodically in advance based on London interbank rates.
- p These Notes bear a fixed rate of interest until 2014. After that date, in the event that the Notes are not redeemed, the Notes will bear interest at rates fixed periodically in advance based on Johannesburg interbank acceptance rates.
- q These Notes bear interest at rates fixed periodically in advance based on the Central Bank of Kenya Treasury Bill rates.

Notes to the accounts

For the year ended 31st December 2008

27 Subordinated liabilities (continued)

The 7.4% Subordinated Notes 2009 (the '7.4% Notes') issued by the Bank have been registered under the US Securities Act of 1933. All other issues of dated loan capital by the Bank, Barclays Spain, BGC, BBB, Barclays Zambia, Barclays Kenya and Absa, which were made in non-US markets, have not been so registered. With respect to the 7.4% Notes, the Bank is not obliged to make (i) a payment of interest on any interest payment date unless a dividend is paid on any class of share capital and (ii) a payment of principal until six months after the respective maturity date with respect to such Notes.

Repayment terms

Unless otherwise indicated, the Group's dated loan capital outstanding at 31st December 2008 is redeemable only on maturity, subject in particular cases, to provisions allowing an early redemption in the event of certain changes in tax law or, in the case of BBB and Barclays Zambia to certain changes in legislation or regulations.

Any repayments prior to maturity require in the case of the Bank, the prior notification to the FSA, in the case of BBB, the prior approval of the Bank of Botswana, in the case of Barclays Zambia, the prior approval of the Bank of Zambia, and in the case of Absa, the prior approval of the South African Registrar of Banks.

There are no committed facilities in existence at the balance sheet date which permit the refinancing of debt beyond the date of maturity.

At 31st December 2007	64	82	475	209	830

Provisions expected to be recovered or settled within no more than 12 months after 31st December 2008 were £333m (2007: £645m).

Sundry provisions are made with respect to commission clawbacks, warranties and litigation claims.

There were no undrawn contractually committed facilities and guarantees provided against undrawn facilities on ABS CDO Super Senior positions (2007: £360m).

29 Securitisations

The Group was party to securitisation transactions involving Barclays residential mortgage loans, business loans and credit card balances. In addition, the Group acts as a conduit for commercial paper, whereby it acquires static pools of residential mortgage loans from other lending institutions for securitisation transactions.

In these transactions, the assets, or interests in the assets, or beneficial interests in the cash flows arising from the assets, are transferred to a special purpose entity, or to a trust which then transfers its beneficial interests to a special purpose entity, which then issues floating rate debt securities to third-party investors.

Securitisations may, depending on the individual arrangement result in continued recognition of the securitised assets and the recognition of the debt securities issued in the transaction; lead to partial continued recognition of the assets to the extent of the Group's continuing involvement in those assets or to derecognition of the assets and the separate recognition, as assets or liabilities, of any rights and obligations created or retained in the transfer. Full derecognition only occurs when the Group transfers both its contractual right to receive cash flows from the financial assets, or retains the contractual rights to receive the cash flows, but assumes a contractual obligation to pay the cash flows to another party without material delay or reinvestment, and also transfers substantially all the risks and rewards of ownership, including credit risk, prepayment risk and interest rate risk.

The following table shows the carrying amount of securitised assets, stated at the amount of the Group's continuing involvement where appropriate, together with the associated liabilities, for each category of asset in the balance sheet:

	2008		2007	
	Carrying amount of assets £m	Associated liabilities £m	Carrying amount of assets £m	Associated liabilities £m
Loans and advances to customers				
Residential mortgage loans	12,754	(13,172)	16,000	(16,786)
Credit card receivables	1,888	(2,109)	4,217	(3,895)
Other personal lending	212	(256)	422	(485)
Wholesale and corporate loans and advances	7,702	(8,937)	8,493	(8,070)
Total	22,556	(24,474)	29,132	(29,236)
Assets designated at fair value through profit or loss				
Retained interest in residential mortgage loans	316	–	895	–

Retained interests in residential mortgage loans are securities which represent a continuing exposure to the prepayment and credit risk in the underlying securitised assets. The total amount of the loans was £31,734m (2007: £23,097m). The retained interest is initially recorded as an allocation of the original carrying amount based on the relative fair values of the portion derecognised and the portion retained.

Notes to the accounts

For the year ended 31st December 2008

30 Retirement benefit obligations

Pension schemes

The UK Retirement Fund (UKRF), which is the main scheme of the Group, amounting to 91% of all the Group's schemes in terms of benefit obligations, comprises ten sections.

The 1964 Pension Scheme

Most employees recruited before July 1997 are members of this non-contributory defined benefit scheme. Pensions are calculated by reference to service and pensionable salary and are normally subject to a deduction from State pension age.

The Retirement Investment Scheme (RIS)

A defined contribution plan for most joiners between July 1997 and 1st October 2003. This was closed to new entrants on 1st October 2003 and the large majority of existing members of the RIS transferred to **afterwork** in respect of future benefit accrual with effect from 1st January 2004. There are now no longer any active members of the RIS.

The Pension Investment Plan (PIP)

A defined contribution plan created from 1st July 2001 to provide benefits for certain employees of Barclays Capital.

afterwork

Combines a contributory cash balance element with a voluntary defined contribution element. New employees since 1st October 2003 are eligible to join **afterwork**. In addition, the large majority of active members of the RIS (now closed) were transferred to **afterwork** in respect of future benefit accrual after 1st January 2004.

Career Average Section

The Career Average Section was established in the UKRF with effect from 1st May 2004 following the transfer of members from the Woolwich Pension Fund. The Career Average Section is a non-contributory career average scheme and was closed to new entrants on 1st December 2006.

1951 Fund Section, AP89 Section, BCPS Section, CCS Section and Mercantile Section

Five new sections were established in the UKRF with effect from 31st March 2007 following the merger of the UKRF with five smaller schemes sponsored from within the Group. All five sections are closed to new members.

The 1951 Fund Section, AP89 Section and Mercantile Section provide final salary benefits calculated by reference to service and pensionable salary.

The BCPS and CCS Sections provide defined contribution benefits. The benefits built up in these sections in relation to service before 6th April 1997 are subject to a defined benefit minimum.

In addition, the costs of ill-health retirements and death in service benefits are generally borne by the UKRF for each of the ten sections. From November 2008, members were given the option to pay member contributions by way of salary sacrifice.

Governance

The assets of the UKRF are held separately from the assets of the Group and are administered by trustees.

Barclays Pension Fund Trustees Ltd (BPFTL) acts as corporate trustee for the UKRF. BPFTL is a private limited company, incorporated on 20th December 1990, and is a subsidiary of Barclays Bank PLC.

As the corporate trustee for the UKRF, BPFTL is the legal owner of the assets of the UKRF and BPFTL holds these assets in trust for the beneficiaries of the scheme.

BPFTL comprises nine Directors, of which six are Employer Directors selected by the Bank and three are Employee Directors nominated by the Pension Fund Advisory Committee (PFAC). Employee Directors are selected from those eligible active employees and pensioner members who apply to be considered for the role.

Employee Director vacancies are advertised to all eligible active and pensioner members. This enables any eligible member with an interest in becoming an Employee Director to express that interest and be considered for the role. The PFAC provides the mechanism through which Employee Directors are selected. The PFAC will accept nominations from eligible members and select from amongst all properly nominated candidates.

There are also three Alternate Employer Directors and three Alternate Employee Directors. The selection process for these appointments are as detailed above. The role of alternate directors is to provide cover for individual directors, should they not be available for meetings.

Under the Pensions Act 2004 the Bank and the Trustee must agree on the funding rate (including a recovery plan to fund any deficit against the scheme specific statutory funding objective). The first ongoing funding valuation to be completed under this legislation had an effective date of 30th September 2007.

In addition to the UKRF, there are other defined benefit and defined contribution schemes in the UK and overseas. The same approach to pensions governance applies to the other schemes in the UK but different legislation covers schemes outside of the UK where in most cases the Bank has the power to determine the funding rate.

30 Retirement benefit obligations (continued)

The following tables present an analysis of defined benefit obligation and fair value of plan assets for all the Group's pension schemes and post-retirement benefits (the latter are unfunded) and present the amounts recognised in the income statement including those related to post-retirement health care.

Income statement charge

	2008			2007			2006		
	Pensions £m	Other post- retirement benefits £m	Total £m	Pensions £m	Other post- retirement benefits £m	Total £m	Pensions £m	Other post- retirement benefits £m	Total £m
Staff cost charge									
Current service cost	299	2	301	332	2	334	378	21	399
Interest cost	991	8	999	905	8	913	900	8	908
Expected return on scheme assets	(1,175)	–	(1,175)	(1,074)	–	(1,074)	(999)	–	(999)
Recognised actuarial (gain)/loss	(23)	(1)	(24)	(1)	–	(1)	3	1	4
Past service cost	2	(8)	(6)	20	–	20	29	–	29
Curtailment or settlements	(5)	–	(5)	(32)	–	(32)	(29)	–	(29)
Total included in staff costs	89	1	90	150	10	160	282	30	312

Staff costs are included in other operating expenses.

Change in benefit obligation

	2008					2007				
	Pensions		Post-retirement benefits		Total £m	Pensions		Post-retirement benefits		Total £m
	UK £m	Overseas £m	UK £m	Overseas £m		UK £m	Overseas £m	UK £m	Overseas £m	
Benefit obligation at beginning of the year	(16,563)	(913)	(60)	(98)	(17,634)	(17,256)	(894)	(97)	(76)	(18,323)
Current service cost	(276)	(23)	–	(2)	(301)	(317)	(15)	(1)	(1)	(334)
Interest cost	(946)	(45)	(3)	(5)	(999)	(869)	(36)	(4)	(4)	(913)

Net recognised liability	(1,025)	(111)	(54)	(102)	(1,292)	(1,244)	(110)	(63)	(84)	(1,501)

The UKRF funded status, as measured using the IAS 19 assumptions, has decreased from a £0.7bn surplus at 31st December 2007 to a deficit of £0.9bn at 31st December 2008.

The assumptions used for the current year and prior year are detailed below. Among the reasons for this change were the large loss on the assets over the year and, to a lesser extent, a strengthening of the allowance made for future improvements in mortality. Offsetting these were the increase in AA long-term corporate bond yields which resulted in a higher discount rate of 6.75% (31st December 2007: 5.82%), a decrease in the inflation assumption to 3.16% (31st December 2007: 3.45%) and contributions paid.

Assumptions

Obligations arising under defined benefit schemes are actuarially valued using the projected unit credit method. Under this method, where a defined benefit scheme is closed to new members, such as in the case of the 1964 Pension Scheme, the current service cost expressed as a percentage of salary is expected to increase in the future, although this higher rate will be applied to a decreasing payroll. The latest actuarial IAS valuations were carried out as at 31st December using the following assumptions:

	UK schemes		Overseas schemes	
	2008 % p.a.	2007 % p.a.	2008 % p.a.	2007 % p.a.
Discount rate	6.75	5.82	7.09	7.51
Rate of increase in salaries	3.66	3.95	5.93	5.60
Inflation rate	3.16	3.45	3.98	4.13
Rate of increase for pensions in payment	3.06	3.45	3.17	3.55
Rate of increase for pensions in deferment	3.16	3.30	4.37	2.50
Initial health care inflation	8.00	8.00	9.00	10.00
Long-term health care inflation	5.00	5.00	5.01	5.01
Expected return on plan assets	6.80	6.70	7.95	7.84

30 Retirement benefit obligations (continued)

Assumptions (continued)

The expected return on plan assets assumption is weighted on the basis of the fair value of these assets. Health care inflation assumptions are weighted on the basis of the health care cost for the period. All other assumptions are weighted on the basis of the defined benefit obligation at the end of the period.

The UK Schemes discount rate assumption is based on a liability-weighted rate derived from a AA corporate bond yield curve.

The overseas health care inflation assumptions relate to the US and Mauritius.

Mortality assumptions

The post-retirement mortality assumptions used in valuing the liabilities of the UKRF were based on the standard 2000 series tables as published by the Institute and Faculty of Actuaries. These tables are considered to be most relevant to the population of the UKRF based on their mortality history. These were then adjusted in line with the actual experience of the UKRF's own pensioners relative to the standard table. An allowance has been made for future mortality improvements based on the medium cohort projections published by the CMIB subject to a floor of 1% pa on future improvements. On this basis the post-retirement mortality assumptions for the UKRF includes:

	2008	2007	2006	2005	2004
Longevity at 60 for current pensioners (years)					
– Males	27.4	26.7	25.8	25.8	25.7
– Females	28.5	27.9	29.5	29.5	29.4
Longevity at 60 for future pensioners currently aged 40 (years)					
– Males	29.5	28.0	27.1	27.1	27.0
– Females	30.5	29.1	30.7	30.6	30.6

Sensitivity analysis

Sensitivity analysis for each of the principal assumptions used to measure the benefit obligation of the UKRF are as follows:

	Impact on UKRF benefit obligation	
	(Decrease)/ Increase %	(Decrease)/ Increase £bn
0.5% increase to:		
– Discount rate	(8.5)	(1.2)
– Rate of inflation	8.8	1.3
– Rate of salary growth	1.0	0.2
1 year increase to longevity at 60	2.5	0.4

Post-retirement health care

A one percentage point change in assumed health care trend rates, assuming all other assumptions remain constant would have the following effects for 2008:

	1% increase £m	1% decrease £m
Effect on total of service and interest cost components	1	(1)
Effect on post-retirement benefit obligation	17	(14)

Assets

A long-term strategy has been set for the asset allocation of the UKRF which comprises a mixture of equities, bonds, property and other appropriate assets. This recognises that different asset classes are likely to produce different long-term returns and some asset classes may be more volatile than others.

The long-term strategy ensures that investments are adequately diversified. Asset managers are permitted some flexibility to vary the asset allocation from the long-term strategy within control ranges agreed with the trustee from time to time.

The UKRF also employs derivative instruments, where appropriate, to achieve a desired exposure or return, or to match assets more closely to liabilities. The value of assets shown below reflects the actual physical assets held by the scheme, with any derivative holdings reflected on a mark to market basis. The expected return on asset assumptions, both for individual asset classes and overall, have been based on the portfolio of assets created after allowing for the net impact of the derivatives on the risk and return profile of the holdings.

Notes to the accounts

For the year ended 31st December 2008

30 Retirement benefit obligations (continued)

Assets (continued)

The value of the assets of the schemes, their percentage in relation to total scheme assets, and their expected rate of return at 31st December 2008 and 31st December 2007 were as follows:

	2008								
	UK schemes			Overseas schemes			Total		
	Value £m	% of total fair value of scheme assets	Expected rate of return %	Value £m	% of total fair value of scheme assets	Expected rate of return %	Value £m	% of total fair value of scheme assets	Expected rate of return %

	2007								
	UK schemes			Overseas schemes			Total		
	Value £m	% of total fair value of scheme assets	Expected rate of return %	Value £m	% of total fair value of scheme assets	Expected rate of return %	Value £m	% of total fair value of scheme assets	Expected rate of return %
Equities	7,467	43	8.3	441	55	8.4	7,908	44	8.3
Bonds	7,445	43	5.1	300	38	7.6	7,745	43	5.2
Property	1,712	10	7.0	16	2	11.5	1,728	10	7.0
Derivatives	(12)	–	–	–	–	–	(12)	–	–
Cash	284	2	5.1	42	5	5.6	326	1	5.2
Other	335	2	5.3	(3)	–	–	332	2	5.4
Fair value of plan assets^a	17,231	100	6.7	796	100	7.8	18,027	100	6.8

The UKRF plan assets include £27m relating to UK private equity investments (2007: £39m) and £735m relating to overseas private equity investments (2007: £664m). These are disclosed within Equities.

Amounts included in the fair value of plan assets include £5m (2007: £6m) relating to shares in Barclays Group, £11m (2007: £6m) relating to bonds issued by the Barclays Group, £nil (2007: £nil) relating to other investments in the Barclays Group, and £17m (2007: £10m) relating to property occupied by Group companies.

The expected return on assets is determined by calculating a total return estimate based on weighted average estimated returns for each asset class. Asset class returns are estimated using current and projected economic and market factors such as inflation, credit spreads and equity risk premiums.

The Group actual return on plan assets was a decrease of £3,480m (2007: £731m increase.)

Note

^a Excludes £675m (2007: £782m) representing the money purchase assets of the UKRF.

30 Retirement benefit obligations (continued)

Actuarial gains and losses

The actuarial gains and losses arising on plan liabilities and plan assets are as follows:

	UK schemes				
	2008 £m	2007 £m	2006 £m	2005 £m	2004 £m

Notes to the accounts

For the year ended 31st December 2008

30 Retirement benefit obligations (continued)

Funding

The most recent triennial funding valuation of the UK Retirement Fund was performed with an effective date of 30th September 2007. In compliance with the Pensions Act 2004, the Group and Trustee have agreed a scheme specific funding target, statement of funding principles, and a schedule of contributions. This agreement forms the basis of the Group's commitment that the fund has sufficient assets to make payments to members in respect of their accrued benefits as and when they fall due. This funding valuation uses a discount rate that reflects a prudent expectation of long-term future investment returns from the current and assumed future investment strategy, and takes into account projected future salary increases when assessing liabilities arising from accrued service.

As at 30th September 2007 the funding valuation showed a surplus of £0.2bn. The Scheme Actuary prepares an annual update of the funding position as at 30th September. The first annual update was carried out as at 30th September 2008 and showed a deficit of £2.2bn.

The Group has agreed funding contributions which, in aggregate, are no less than those which are sufficient to meet the Group's share of the cost of benefits accruing over each year. The Group has, in the recent past, chosen to make funding contributions in excess of this, more consistent with the IAS service cost.

Defined benefit contributions paid with respect to the UKRF were as follows:

	£m
Contributions paid	
2008	336
2007	355
2006	351

Excluding the UKRF, the Group is expected to pay contributions of approximately £2m to UK schemes and £53m to overseas schemes in 2009.

The total contribution to be paid in 2009 to the UKRF is not expected to be significantly different than in previous years.

Issue of new ordinary shares

During the year, the following share issues took place:

On 4th July 2008, Barclays PLC raised approximately £500m (before issue costs) through the issue of 168.9 million new ordinary shares at £2.96 per share in a firm placing to Sumitomo Mitsui Banking Corporation.

On 22nd July 2008, Barclays PLC raised approximately £3,969m (before issue costs) through the issue of 1,407.4 million new ordinary shares at £2.82 per share in a placing to Qatar Investment Authority, Challenger Universal Limited (a company representing the beneficial interests of His Excellency Sheikh Hamad Bin Jassim Bin Jabr Al-Thani, the Chairman of Qatar Holding LLC, and his family), China Development Bank, Temasek Holdings (Private) Limited and certain leading institutional shareholders and other investors, which shares were available for clawback in full by means of an open offer to existing shareholders. Valid applications under the open offer were received from qualifying shareholders in respect of approximately 267 million new ordinary shares in aggregate, representing 19.0 per cent. of the shares offered pursuant to the open offer. Accordingly, the remaining 1,140.3 million shares were allocated to the various investors with whom they had been conditionally placed.

On 18th September 2008, Barclays PLC raised approximately £701m (before issue costs) through the issue of 226 million new ordinary shares at £3.10 per share to certain institutional investors. The proceeds of the issuance, in excess of the nominal value and issue costs, of £634m were credited to retained earnings. This resulted from the operation of section 131 of the Companies Act 1985 with regard to the issue of shares by Barclays PLC in exchange for shares in Long Island Investments Jersey No. 1 Limited and the subsequent redemption of redeemable preference shares of that company for cash.

During the period from 27th November 2008 to 31st December 2008, 33,000 ordinary shares have been issued following conversion of Mandatorily Convertible Notes (see below) at the option of their holders.

Share repurchase

During the year Barclays PLC purchased in the market 36 million of its own ordinary shares of 25p each at a total cost of £173m. These transactions represent less than 0.5% of the issued share capital at 31st December 2008. These shares purchased during the period were open market transactions.

Barclays PLC purchased all of its staff shares in issue, following approval for such purchase being given at the 2008 Annual General Meeting, at a total cost of £1m.

At the 2008 AGM on 24th April, Barclays PLC was authorised to repurchase 984,960,000 of its ordinary shares of 25p. The authorisation is effective until the AGM in 2009.

Cancellation of share premium account

On 11th October 2007, the order of the High Court confirming the cancellation of £7,223m of the share premium account was registered with the Registrar of Companies. This created £7,223m of additional distributable reserves in Barclays PLC. The purpose of the cancellation of the share premium account was to create distributable profits in order to allow the payment of dividends following the completion of the share buy-back programme, the redemption of the preference shares which were to have been issued in connection with the proposed merger with ABN AMRO, and to provide maximum flexibility to manage the Group's capital resources.

Warrants

On 31st October 2008 Barclays PLC issued, in conjunction with a simultaneous issue of Reserve Capital Instruments, warrants to subscribe for up to 1516.9 million new ordinary shares at a price of £1.97775 to Qatar Holding and HH Sheikh Mansour Bin Zayed Al Nahyan. A fair value of £800m before transaction costs of £24m was attributed to the warrants, which may be exercised at any time up to close of business 31st October 2013.

The fair value (net of transaction costs) of the warrants have been included in retained earnings (see Note 32).

Shares under option

The Group has four schemes that give employees rights to subscribe for new shares in Barclays PLC. A summary of the key terms of each scheme are included in Note 45.

At 31st December 2008, 94.1 million (2007: 74.0 million) options were outstanding under the terms of the Sharesave Share Option Scheme (Sharesave), 0.5 million (2007: 1.4 million) options were outstanding under the terms of the Executive Share Option Scheme (ESOS), 0.4 million (2007: 0.5 million) options were outstanding under the terms of the Woolwich Executive Share Option Plan (Woolwich ESOP) and 20.5 million (2007: 20.5 million) options were outstanding under the terms of the Incentive Share Option Plan (ISOP), enabling certain Directors and members of staff to subscribe for ordinary shares between 2008 and 2016 at prices ranging from 144p to 551p.

Notes to the accounts

For the year ended 31st December 2008

31 Ordinary shares, share premium, and other equity (continued)

In addition to the above, the independent trustee of the Barclays Group (ESAS) Employees' Benefit Trust (ESAS Trust), established by Barclays Bank PLC in 1996, operates the Executive Share Award Scheme (ESAS). ESAS is a deferred share bonus plan for employees of the Group. The key terms of the ESAS are described in Note 45. The independent trustees of the ESAS Trust make awards of Barclays shares and grant options over Barclays shares to beneficiaries of the ESAS Trust. Beneficiaries of the ESAS Trust include employees and former employees of the Barclays Group.

The independent trustee of the Barclays Group (PSP and ESOS) Employees' Benefit Trust (PSP Trust), established by Barclays Bank PLC in 1996, operates the Performance Share Plan (PSP) and may satisfy awards under the ESOS. No awards have been made under this trust since 1999. All awards are in the form of options over Barclays shares.

The Sharepurchase scheme which was established in 2002 is open to all eligible UK employees, including executive Directors. The key terms of the Sharepurchase scheme are described in Note 45.

Other equity – Mandatorily Convertible Notes

On 27th November 2008, Barclays Bank PLC issued £4,050m of 9.75% Mandatorily Convertible Notes (MCNs) maturing on 30th September 2009 to Qatar Holding LLC, Challenger Universal Limited and entities representing the beneficial interests of HH Sheikh Mansour Bin Zayed Al Nahyan, a member of the Royal Family of Abu Dhabi and existing institutional shareholders and other institutional investors. If not converted at the holders' option beforehand, these instruments mandatorily convert to ordinary shares of Barclays PLC on 30th June 2009. The conversion price is £1.53276, and, after taking into account MCNs that were converted on or before 31st December 2008, will result in the issue of 2,642 million new ordinary shares. Following conversion the relevant amounts will be credited to share capital and share premium.

Of the proceeds of the MCNs, £233m has been included in the Group's liabilities, being the fair value of the coupon before issue costs at the date of issue. The remaining proceeds are included in other equity and will be transferred to share capital and share premium on conversion in both the Barclays PLC Group and Company.

The capital redemption reserve and other capital reserve represent transfers from retained earnings in accordance with relevant legislation. These reserves are not distributable.

The available for sale reserve represents the unrealised change in the fair value of available for sale investments since initial recognition.

The cash flow hedging reserve represents the cumulative gains and losses on effective cash flow hedging instruments that will be recycled to the income statement when the hedged transactions affect profit or loss.

The currency translation reserve represents the cumulative gains and losses on the retranslation of the Group's net investment in foreign operations, net of the effects of hedging.

Transfers from cash flow hedging reserve

Gains and losses transferred from the cash flow hedging reserve were to: interest income: £4m loss (2007: £93m), interest expense: £74m loss (2007: £11m gain), net trading income: £119m gain (2007: £100m loss), and administration and general expenses: £60m loss (2007: £16m loss).

The Treasury shares primarily relate to Barclays PLC shares held by employee benefit trusts in relation to the Executive Share Award Scheme, Performance Share Plan and Sharepurchase Scheme, to the extent that such shares have not been allocated to employees. These schemes are described in Note 45.

The total number of Barclays shares held in Group employee benefit trusts at 31st December 2008 was 217.9 million (2007: 211.4 million). Dividend rights have been waived on nil (2007: nil) of these shares. The total market value of the shares held in trust based on the year-end share price of £1.53 (2007: £5.04) was £333m (2007: £1,065m). As at 31st December 2008, options over 19.1 million (2007: 16.6 million) of the total shares held in the trusts were exercisable.

The Group operates in a number of countries subject to regulations under which a local subsidiary has to maintain a minimum level of capital. The current policy of the Group is that local capital requirements are met, as far as possible, by the retention of profit. Certain countries operate exchange control regulations which limit the amount of dividends that can be remitted to non-resident shareholders. It is not possible to determine the amount of profit retained and other reserves that are restricted by these regulations, but the net profit retained of overseas subsidiaries, associates and joint ventures at 31st December 2008 totalled £4,581m (2007: £7,311m). If such overseas reserves were to be remitted, other tax liabilities, which have not been provided for in the accounts, might arise.

During the year, Barclays Bank PLC issued the following Preference Shares:

106 million Preference Shares of nominal US\$0.25 each (Principal amount: US\$2,650m; £1,345m) with a 8.125% dividend issued on 11th April 2008 and 25th April 2008.

34 Contingent liabilities and commitments

Contingent liabilities and commitments

The following table summarises the nominal principal amount of contingent liabilities and commitments with off-balance sheet risk:

	2008 £m	2007 £m
Acceptances and endorsements	585	365
Guarantees and letters of credit pledged as collateral security	15,652	12,973
Securities lending arrangements	38,290	22,719
Other contingent liabilities	11,783	9,717
Contingent liabilities	66,310	45,774
Documentary credits and other short-term trade related transactions	859	522
Undrawn note issuance and revolving underwriting facilities:		
Forward asset purchases and forward deposits placed	291	283
Standby facilities, credit lines and other	259,666	191,834
Commitments	260,816	192,639

Nature of instruments

In common with other banks, the Group conducts business involving acceptances, performance bonds and indemnities. The majority of these facilities are offset by corresponding obligations of third parties.

An acceptance is an undertaking by a bank to pay a bill of exchange drawn on a customer. The Group expects most acceptances to be presented, but reimbursement by the customer is normally immediate. Endorsements are residual liabilities of the Group in respect of bills of exchange, which have been paid and subsequently rediscounted.

Guarantees and letters of credit are given as security to support the performance of a customer to third parties. As the Group will only be required to meet these obligations in the event of the customer's default, the cash requirements of these instruments are expected to be considerably below their nominal amounts.

The Group facilitates securities lending arrangements for its investment management clients whereby securities held by funds are lent to third parties. The borrowers provide the funds with collateral in the form of cash or other assets equal to at least 100% of the securities lent plus a margin of at least 2% up to 8%. Over the period of the loan, the funds may make margin calls to the extent that the collateral is less than the market value of the securities lent. Amounts disclosed above represent the total market value of the lent securities at 31st December 2008. The market value of collateral held by the funds was £39,690m (2007: £23,559m).

34 Contingent liabilities and commitments (continued)

Other contingent liabilities include transaction related customs and performance bonds and are, generally, short-term commitments to third parties which are not directly dependent on the customer's creditworthiness.

Commitments to lend are agreements to lend to a customer in the future, subject to certain conditions. Such commitments are either made for a fixed period, or have no specific maturity but are cancellable by the lender subject to notice requirements.

Documentary credits commit the Group to make payments to third parties, on production of documents, which are usually reimbursed immediately by customers.

Capital commitments

At 31st December 2008 the commitments for capital expenditure under contract amounted to £48m (2007: £6m).

Assets pledged

Assets are pledged as collateral to secure liabilities under repurchase agreements, securitisations and stock lending agreements or as security deposits relating to derivatives. The disclosure includes any asset transfers associated with liabilities under repurchase agreements and securities lending transactions.

The following table summarises the nature and carrying amount of the assets pledged as security against these liabilities:

	2008 £m	2007 £m
Trading portfolio assets	81,186	76,226
Loans and advances	28,789	32,846
Available for sale investments	32,321	16,378
Other	3,812	580
Assets pledged	146,108	126,030

Collateral held as security for assets

Under certain transactions, including reverse repurchase agreements and stock borrowing transactions, the Group is allowed to resell or repledge the collateral held. The fair value at the balance sheet date of collateral accepted and repledged to others was as follows:

	2008 £m	2007 £m
Fair value of securities accepted as collateral	424,819	343,986
Of which fair value of securities repledged / transferred to others	374,222	269,157

35 Legal proceedings

Barclays has for some time been party to proceedings, including a class action, in the United States against a number of defendants following the collapse of Enron; the class action claim is commonly known as the Newby litigation. On 20th July 2006 Barclays received an Order from the United States District Court for the Southern District of Texas Houston Division which dismissed the claims against Barclays PLC, Barclays Bank PLC and Barclays Capital Inc. in the Newby litigation. On 4th December 2006 the Court stayed Barclays dismissal from the proceedings and allowed the plaintiffs to file a supplemental complaint. On 19th March 2007 the United States Court of Appeals for the Fifth Circuit issued its decision on an appeal by Barclays and two other financial institutions contesting a ruling by the District Court allowing the Newby litigation to proceed as a class action. The Court of Appeals held that because no proper claim against Barclays and the other financial institutions had been alleged by the plaintiffs, the case could not proceed against them. The plaintiffs applied to the United States Supreme Court for a review of this decision. On 22nd January 2008, the United States Supreme Court denied the plaintiffs' request for review. Following the Supreme Court's decision, the District Court ordered a further briefing concerning the status of the plaintiffs' claims. Barclays is seeking the dismissal of the plaintiffs' claims. Barclays considers that the Enron related claims against it are without merit and is defending them vigorously. It is not possible to estimate Barclays possible loss in relation to these matters, nor the effect that they might have upon operating results in any particular financial period.

Like other UK financial services institutions, the Group faces numerous County Court claims and complaints by customers who allege that its unauthorised overdraft charges either contravene the Unfair Terms in Consumer Contracts Regulations 1999 (UTCCR) or are unenforceable penalties or both. In July 2007, by agreement with all parties, the OFT commenced proceedings against seven banks and one building society, including Barclays, to resolve the matter by way of a 'test case' process. Preliminary issues hearings took place in January, July and December 2008 with judgments handed down in April and October 2008 and January 2009 (a further judgment not concerning Barclays terms). As to current terms, in April 2008 the Court held in favour of the banks on the issue of the penalty doctrine. The OFT did not appeal that decision. In the same judgment the Court held in favour of the OFT on the issue of the applicability of the UTCCR. The banks appealed that decision. As to past terms, in a judgment on 8th October 2008, the Court held that Barclays historic terms, including those of Woolwich, were not capable of being penalties. The OFT indicated at the January 2009 hearing that it was not seeking permission to appeal the Court's findings in relation to the applicability of the penalty doctrine to historic terms. Accordingly, it is now clear that no declarations have or will be made against Barclays that any of its unauthorised overdraft terms assessed in the test case constitute unenforceable penalties and that the OFT will not pursue this aspect of the test case further. The proceedings will now concentrate exclusively on UTCCR issues. The banks' appeal against the decision in relation to the applicability of the UTCCR (to current and historic terms) took place at a hearing in late October 2008. On 26th February 2009 the Court of Appeal dismissed the banks' appeal, holding, in a judgment of broad application, that the relevant charges were not exempt from the UTCCR. The banks will petition the House of Lords for leave to appeal the decision. It is likely that the proceedings will still take a significant period of time to conclude. Pending resolution of the test case process, existing and new claims in the County Courts remain stayed, and there is an FSA waiver of the complaints handling process (which is reviewable in July 2009) and a standstill of Financial Ombudsman Service decisions. The Group is defending the test case vigorously. It is not practicable to estimate the Group's possible loss in relation to these matters, nor the effect that they may have upon operating results in any particular financial period.

Notes to the accounts

For the year ended 31st December 2008

35 Legal proceedings (continued)

Barclays is engaged in various other litigation proceedings both in the United Kingdom and a number of overseas jurisdictions, including the United States, involving claims by and against it which arise in the ordinary course of business. Barclays does not expect the ultimate resolution of any of the proceedings to which Barclays is party to have a significant adverse effect on the financial position of the Group and Barclays has not disclosed the contingent liabilities associated with these claims either because they cannot reasonably be estimated or because such disclosure could be prejudicial to the conduct of the claims.

36 Competition and regulatory matters

The scale of regulatory change remains challenging, arising in part from the implementation of some key European Union (EU) directives. Many changes to financial services legislation and regulation have come into force in recent years and further changes will take place in the near future. Concurrently, there is continuing political and regulatory scrutiny of the operation of the retail banking and consumer credit industries in the UK and elsewhere. The nature and impact of future changes in policies and regulatory action are not predictable and beyond the Group's control but could have an impact on the Group's businesses and earnings.

In September 2005, the Office of Fair Trading (OFT) received a super-complaint from the Citizens Advice Bureau relating to payment protection insurance (PPI). As a result, the OFT commenced a market study on PPI in April 2006. In October 2006 the OFT announced the outcome of the market study and the OFT referred the PPI market to the UK Competition Commission (CC) for an in-depth inquiry in February 2007. In June 2008, the CC published its provisional findings. The CC published its final report into the PPI market on 29th January 2009. The CC's conclusion is that the businesses which offer PPI alongside credit face little or no competition when selling PPI to their credit customers. The CC has set out a package of measures which it considers will introduce competition into the market (the 'Remedies'). The Remedies, which are expected to be implemented (following consultation) in 2010, are: a ban on sale of PPI at the point of sale; a prohibition on the sale of single premium PPI; mandatory personal PPI quotes to customers; annual statements for all regular premium policies, including the back book (for example credit card and mortgage protection policies); measures to ensure that improved information is available to customers; obliging providers to give information to the OFT to monitor the Remedies and to provide claims ratios to any person on request. Barclays is reviewing the report and considering the next steps, including how this might affect the Group's different products.

In October 2006, the FSA published the outcome of its broad industry thematic review of PPI sales practices in which it concluded that some firms fail to treat customers fairly and that the FSA would strengthen its actions against such firms. Tackling poor PPI sales practices remains a priority for the FSA, with their most recent update on their thematic work published in September 2008. Barclays voluntarily complied with the FSA's request to cease selling single premium PPI by the end of January 2009. There has been no enforcement action against Barclays in respect of its PPI products. The Group has cooperated fully with these investigations into PPI and will continue to do so.

The OFT has carried out investigations into Visa and MasterCard credit card interchange rates. The decision by the OFT in the MasterCard interchange case was set aside by the Competition Appeals Tribunal in June 2006. The OFT is progressing its investigations in the Visa interchange case and a second MasterCard interchange case in parallel and both are ongoing. The outcome is not known but these investigations may have an impact on the consumer credit industry in general and therefore on the Group's business in this sector. In February 2007 the OFT announced that it was expanding its investigation into interchange rates to include debit cards.

In September 2006, the OFT announced that it had decided to undertake a fact find on the application of its statement on credit card fees to current account unauthorised overdraft fees. The fact find was completed in March 2007. On 29th March 2007, the OFT announced its decision to conduct a formal investigation into the fairness of bank current account charges. The OFT initiated a market study into personal current accounts (PCAs) in the UK on 26th April 2007. The study's focus was PCAs but it also included an examination of other retail banking products, in particular savings accounts, credit cards, personal loans and mortgages in order to take into account the competitive dynamics of UK retail banking. On 16th July 2008, the OFT published its market study report, in which it concluded that certain features of the UK PCA market were not working well for consumers. The OFT reached the provisional view that some form of regulatory intervention is necessary in the UK PCA market. On 16th July 2008, the OFT also announced a consultation to seek views on the findings and possible measures to address the issues raised in its report. The consultation period closed on 31st October 2008. The Group has participated fully in the market study process and will continue to do so.

US laws and regulations require compliance with US economic sanctions, administered by the Office of Foreign Assets Control, against designated foreign countries, nationals and others. HM Treasury regulations similarly require compliance with sanctions adopted by the UK government. The Group has been conducting an internal review of its conduct with respect to US Dollar payments involving countries, persons and entities subject to these sanctions and has been reporting to governmental authorities about the results of that review. The Group received inquiries relating to these sanctions and certain US Dollar payments processed by its New York branch from the New York County District Attorney's Office and the US Department of Justice, which along with other authorities, has been reported to be conducting investigations of sanctions compliance by non-US financial institutions. The Group has responded to those inquiries and is cooperating with the regulators, the Department of Justice and the District Attorney's Office in connection with their investigations of Barclays conduct with respect to sanctions compliance. Barclays has also received a formal notice of investigation from the FSA, and has been keeping the FSA informed of the progress of the US investigations and Barclays internal review. Barclays review is ongoing. It is currently not possible to predict the ultimate resolution of the issues covered by Barclays review and the investigations, including the timing and potential financial impact of any resolution, which could be substantial.

The Financial Services Compensation Scheme provides compensation to customers of financial institutions in the event that an institution is unable, or is likely to be unable, to pay claims against it. During the year, a number of institutions, including Bradford & Bingley plc, Heritable Bank plc, Kaupthing Singer & Friedlander Limited, Landsbanki 'Icesave', and London Scottish Bank plc, were declared in default by the FSA. In order to meet its obligations to the depositors of these institutions, the FSCS has borrowed £19.7 billion from HM Treasury, which is on an interest only basis until September 2011. These borrowings are anticipated to be repaid wholly or substantially from the realisation of the assets of the above named institutions. The FSCS raises annual levies from the banking industry to meet its management expenses and compensation costs. Individual institutions make payments based on their level of market participation (in the case of deposits, the proportion that their protected deposits represent of total market protected deposits) at 31st December each year. If an institution is a market participant on this date it is obligated to pay a levy. Barclays Bank PLC was a market participant at 31st December 2007 and 2008. The Group has accrued £101m for its share of levies that will be raised by the FSCS including the interest on the loan from HM Treasury in respect of the levy years to 31st March 2010. The accrual includes estimates for the interest FSCS will pay on the loan and estimates of Barclays market participation in the relevant periods. Interest will continue to accrue on the HM Treasury loan to the FSCS until September 2011 and will form part of future FSCS management expenses levies. If the assets of the defaulting institutions are insufficient to repay the HM Treasury loan in 2011, the FSCS will agree a schedule of repayments with HM Treasury, which will be recouped from the industry in the form of additional levies. At the date of these financial statements, it is not possible to estimate whether there will ultimately be additional levies on the industry, the level of Barclays market participation or other factors that may affect the amounts or timing of amounts that may ultimately become payable, nor the effect that such levies may have upon operating results in any particular financial period.

37 Leasing

The Group is both lessor and lessee under finance and operating leases, providing asset financing for its customers and leasing assets for its own use. In addition, assets leased by the Group may be sublet to other parties. An analysis of the impact of these transactions on the Group balance sheet and income statement is as follows:

(a) As Lessor

Finance lease receivables

The Group specialises in asset-based lending and works with a broad range of international technology, industrial equipment and commercial companies to provide customised finance programmes to assist manufacturers, dealers and distributors of assets.

Finance lease receivables are included within loans and advances to customers.

The Group's net investment in finance lease receivables was as follows:

	2008				2007			
	Gross investment in finance lease receivables £m	Future finance income £m	Present value of minimum lease payments receivable £m	Unguaranteed residual values £m	Gross investment in finance lease receivables £m	Future finance income £m	Present value of minimum lease payments receivable £m	Unguaranteed residual values £m
Not more than one year	3,929	(689)	3,240	149	3,657	(780)	2,877	213
Over one year but not more than five years	8,668	(1,673)	6,995	355	7,385	(1,613)	5,772	374
Over five years	3,419	(768)	2,651	25	3,476	(935)	2,541	14
Total	16,016	(3,130)	12,886	529	14,518	(3,328)	11,190	601

The allowance for uncollectable finance lease receivables included in the allowance for impairment amounted to £189m at 31st December 2008 (2007: £113m).

Operating lease receivables

The Group acts as lessor, whereby items of plant and equipment are purchased and then leased to third parties under arrangements qualifying as operating leases. The items purchased to satisfy these leases are treated as plant and equipment in the Group's financial statements and are generally disposed of at the end of the lease term (see Note 23).

The future minimum lease payments expected to be received under non-cancellable operating leases at 31st December 2008 were as follows:

	2008 Plant and equipment £m	2007 Plant and equipment £m
Not more than one year	80	29
Over one year but not more than two years	42	24
Over two years but not more than three years	36	22
Over three years but not more than four years	24	20
Over four years but not more than five years	13	11
Over five years	39	10
Total	234	116

(b) As Lessee

Finance lease commitments

The Group leases items of property, plant and equipment on terms that meet the definition of finance leases. Finance lease commitments are included within other liabilities (see Note 25).

Obligations under finance leases were as follows:

	2008 Total future minimum payments £m	2007 Total future minimum payments £m
Not more than one year	35	12
Over one year but not more than two years	13	14
Over two years but not more than three years	14	13
Over three years but not more than four years	17	12
Over four years but not more than five years	14	15
Over five years	3	17
Net obligations under finance leases	96	83

Notes to the accounts

For the year ended 31st December 2008

37 Leasing (continued)

The carrying amount of assets held under finance leases at the balance sheet date was:

	2008 £m	2007 £m
Cost	87	94
Accumulated depreciation	(67)	(24)
Net book value	20	70

Operating lease commitments

The Group leases various offices, branches and other premises under non-cancellable operating lease arrangements. The leases have various terms, escalation and renewal rights. There are no contingent rents payable. The Group also leases equipment under non-cancellable lease arrangements.

Where the Group is the lessee the future minimum lease payment under non-cancellable operating leases are as follows:

	2008		2007	
	Property £m	Equipment £m	Property £m	Equipment £m
Not more than one year	275	5	191	6
Over one year but not more than two years	354	1	396	1
Over two years but not more than three years	334	1	357	1
Over three years but not more than four years	315	–	323	–
Over four years but not more than five years	465	5	287	–
Over five years	2,744	1	2,225	–
Total	4,487	13	3,779	8

The total of future minimum sublease payments to be received under non-cancellable subleases at the balance sheet date is £158m (2007: £167m).

38 Disposals

The Group made the following material disposals in 2008:

	% Disposal	Date
Barclays Life Assurance Limited	100	31/10/08

	2008 £m
Total disposal consideration	762
Costs associated with disposal	(33)
Net assets disposed	(403)
Profit on disposal of subsidiaries	326
Total disposal consideration	762
Costs associated with disposal	(7)
Repayment of loan on disposal	(386)
Cash and cash equivalents disposed of	(131)
Disposal of subsidiaries, net of cash disposed	238
Cash received in respect of disposal of ownership in BGI UK Holdings Limited through the exercise of options under the BGI EOP scheme	19
Decrease in investment in subsidiaries	19

39 Acquisitions

The Group made the following material acquisitions in 2008:

		Acquisition date	Gains on acquisitions £m	Goodwill £m
Lehman Brothers North American businesses	(a)	22nd September 2008	2,262	–
Macquarie Bank Limited residential mortgage businesses	(b)	6th November 2008	52	–
Goldfish credit card UK businesses	(b)	31st March 2008	92	–
Expobank (100% of ordinary shares)	(c)	1st July 2008	–	243
Gains on acquisitions			2,406	

(a) Lehman Brothers North American businesses

On 22nd September 2008, the Group completed the acquisition of Lehman Brothers North American businesses.

The assets and liabilities of Lehman Brothers North American businesses after the acquisition, details of the purchase price and the gain on acquisition arising were as follows:

	Fair values £m
Assets	
Cash and balances at central banks	861
Trading portfolio assets	23,837
Loans and advances to customers	3,642
Available-for-sale financial investments	1,948
Other assets	41
Intangible assets ^a	888
Property, plant and equipment	886
Deferred tax asset	229
Total assets	32,332
Liabilities	
Customer accounts	2,459
Derivative financial instruments	599
Repurchase agreements and cash collateral on securities lent	24,409
Other liabilities	1,049
Deferred tax liabilities	517
Total liabilities	29,033
Net assets acquired (excludes Obligation to be settled in shares)	3,299
Obligation to be settled in shares ^b	(163)
Acquisition cost	
Cash paid	834
Attributable costs	40
Total consideration	874
Gain on acquisition	2,262

The acquired assets and liabilities summarised in the table above do not represent the entire balance sheet of Lehman Brothers North American businesses, or of discrete business lines within those operations. For this reason it is not practical to reliably determine the carrying amount of the assets and liabilities in the pre-acquisition books and records of Lehman Brothers.

Notes

^a Intangible assets included an amount of £636m relating to customer lists.

^b Under the terms of the acquisition, the Group assumed an obligation to make payments to employees of the acquired business in respect of their pre-acquisition service provided to Lehman Brothers. This amount represents the equity-settled portion of that obligation and is recognised as a component of shareholders' equity.

Notes to the accounts

For the year ended 31st December 2008

39 Acquisitions (continued)

Certain assets were received subsequent to the acquisition date, since it was first necessary to agree their status as assets of the Group with the relevant regulators, custodians, trustees, exchanges and bankruptcy courts. Such assets were initially classified within loans and advances. Once they were received, the related receivable was derecognised and the resulting asset recognised within the appropriate balance sheet category. In the table such assets are classified accordingly.

The initial accounting for the acquisition has been determined only provisionally. Any revisions to fair values that result from the conclusion of the acquisition process with respect to assets not yet received by the Group will be recognised as an adjustment to the initial accounting. Any such revisions must be effected within 12 months of the acquisition date and would result in a restatement of the 2008 income statement and balance sheet.

The excess of the fair value of net assets acquired over consideration paid resulted in £2,262m of gain on acquisition.

It is impracticable to disclose the profit or loss of the acquired Lehman Brothers North American businesses since the acquisition date. The acquired business has been integrated into the corresponding existing business lines and there is no reliable basis for allocating post-acquisition results between the acquirer and the acquiree. Similarly, it is impracticable to disclose the revenue and profit or loss of the combined entity as though the acquisition date had been 1st January 2008. Only parts of Lehman Brothers US and Canadian businesses, and specified assets and liabilities, were acquired. There is no reliable basis for identifying the proportion of the pre-acquisition results of Lehman Brothers that relates to the business acquired by the Group.

(b) Macquarie Bank Limited Italian residential mortgage businesses and Goldfish credit card UK businesses

On 6th November 2008, the Group purchased the Italian residential mortgage businesses of Macquarie Bank Limited.

On 31st March 2008, the Group completed the acquisition of Discover's UK credit card businesses, Goldfish.

The assets and liabilities of Macquarie Bank Limited Italian residential mortgage businesses and Goldfish credit card UK businesses before and after the acquisition, details of the purchase price and gains on acquisitions arising were as follows:

	Macquarie Bank businesses			Goldfish credit card UK businesses		
	Carrying value pre-acquisition £m	Fair value adjustments £m	Fair values £m	Carrying value pre-acquisition £m	Fair value adjustments £m	Fair values £m
Assets						
Cash and balances at central banks	3	–	3	172	–	172
Loans and advances to banks	–	–	–	8	–	8
Loans and advances to customers	833	(20)	813	1,900	(34)	1,866
Other assets	–	–	–	39	(1)	38
Intangible assets	–	–	–	–	32	32
Property, plant and equipment	1	–	1	39	1	40
Deferred tax asset	–	–	–	–	12	12
Total assets	837	(20)	817	2,158	10	2,168
Liabilities						
Long- and short-term borrowings	–	–	–	1,974	–	1,974
Other liabilities	–	–	–	55	–	55
Deferred tax liabilities	–	–	–	–	9	9
Total liabilities	–	–	–	2,029	9	2,038
Net assets acquired	837	(20)	817	129	1	130
Acquisition cost						
Cash paid			765			35
Attributable costs			–			3
Total consideration			765			38
Gains on acquisitions			52			92

The contribution to the consolidated profit before tax of the acquired businesses in the table above for the period from the acquisition date to 31st December 2008 is £1m loss for Macquarie Bank Limited businesses and £40m profit for the Goldfish credit card UK businesses.

The excess remaining after the reassessment of the acquirees' identifiable assets, liabilities and contingent liabilities which has been recognised within the consolidated income statement as a gain on acquisition is £52m for Macquarie Bank Limited businesses and £92m for Goldfish credit card UK businesses.

39 Acquisitions (continued)

(c) Expobank

On 1st July 2008, the Group acquired 100% of the ordinary shares of Expobank, a Russian bank.

The assets and liabilities of the Russian bank, Expobank before and after the acquisition, details of the purchase price and the goodwill arising were as follows:

	Carrying value pre- acquisition £m	Fair value adjustments £m	Fair values £m
Assets			
Cash and balances at central banks	73	–	73
Trading portfolio assets	52	–	52
Loans and advances to customers	446	5	451
Other assets	9	–	9
Intangible assets	–	45	45
Property, plant and equipment	28	–	28
Total assets	608	50	658
Liabilities			
Deposits from banks	71	–	71
Customer accounts	318	–	318
Debt securities in issue	103	–	103
Other liabilities	16	–	16
Total liabilities	508	–	508
Net assets acquired	100	50	150
Goodwill			243
Total			393
Acquisition cost			
Cash paid			386
Attributable costs			7
Total consideration			393

The excess of proceeds over the net assets acquired has generated goodwill of £243m and is attributable to the operational synergies and earnings potential expected to be realised over the longer term.

The results of the business's operations have been included from 1st July 2008 and contributed £1.3m loss to the consolidated profit before tax.

Cash outflows in respect of acquisitions

The aggregate net outflow of cash from the acquisition of the above Group businesses and entities was as follows:

	2008 £m
Cash consideration on acquisitions	2,070
Cash and cash equivalents acquired	(1,109)
Cash outflow on acquisition	961
Cash paid in respect of acquisition of shares in Barclays Global Investors UK Holdings Limited	157
Increase in investment in subsidiaries	157

Notes to the accounts

For the year ended 31st December 2008

40 Investment in subsidiaries

The investment in Barclays Bank PLC is stated in the balance sheet of Barclays PLC at a cost of £15,340m (2007: £10,186m). The increase of £5,154m (2007: £1,545m) during the year represents the cost of additional shares of £16m (2007: £111m), capital contributions of £4,362m (2007: £1,434m), and a non-cash capital contribution of £776m.

The investment in Barclays Investments (Netherlands) N.V. was liquidated in September 2008. The investment was stated in the balance sheet of Barclays PLC at a cost of £205m in 2007.

The investment in Odysseus Jersey (No. 1) Limited was liquidated in September 2008. The investment was stated in the balance sheet of Barclays PLC at a cost of £0.1m in 2007.

In accordance with Section 231(5) of the Companies Act 1985, the above information is provided solely in relation to principal subsidiaries.

The country of registration or incorporation is also the principal area of operation of each of the above subsidiaries. Investments in these subsidiaries are held directly by Barclays Bank PLC except where marked *.

Full information of all subsidiaries will be included in the Annual Return to be filed at Companies House.

Note

^a BBPLC is the beneficial owner of 38.1% of shares and Barclays Holdings (Isle of Man) Limited is the beneficial owner of 61.9% of shares.

42 Other entities

There are a number of entities that do not qualify as subsidiaries under UK Law but which are consolidated when the substance of the relationship between the Group and the entity (usually a Special Purpose Entity (SPE)) indicates that the entity is controlled by the Group. Such entities are deemed to be controlled by the Group when relationships with such entities gives rise to benefits that are in substance no different from those that would arise were the entity a subsidiary.

The consolidation of such entities may be appropriate in a number of situations, but primarily when:

- the operating and financial policies of the entity are closely defined from the outset (i.e. it operates on an 'autopilot' basis) with such policies being largely determined by the Group;
- the Group has rights to obtain the majority of the benefits of the entity and/or retains the majority of the residual or ownership risks related to the entity; or
- the activities of the entity are being conducted largely on behalf of the Group according to its specific business objectives.

Such entities are created for a variety of purposes including securitisation, structuring, asset realisation, intermediation and management.

Entities may have a different reporting date from that of the parent of 31st December. Dates may differ for a variety of reasons including local reporting regulations or tax laws. In accordance with our accounting policies, for the purpose of inclusion in the consolidated financial statements of Barclays PLC, entities with different reporting dates are made up until 31st December.

Entities may have restrictions placed on their ability to transfer funds, including payment of dividends and repayment of loans, to their parent entity. Reasons for the restrictions include:

- Central bank restrictions relating to local exchange control laws.
- Central bank capital adequacy requirements.
- Company law restrictions relating to treatment of the entities as going concerns.

Although the Group's interest in the equity voting rights in certain entities exceeds 50%, or it may have the power to appoint a majority of their Boards of Directors, they are excluded from consolidation because the Group either does not direct the financial and operating policies of these entities, or on the grounds that another entity has a superior economic interest in them. Consequently, these entities are not deemed to be controlled by Barclays.

The table below includes information in relation to such entities as required by the Companies Act 1985, Section 231 (5).

Country of registration or incorporation	Name	Percentage of ordinary share capital held %	Equity share-holders' funds £m	Retained loss for the year £m

Cayman Islands	St James Fleet Investments Two Limited	100	2	–
Cayman Islands	BNY BT NewCo Limited	–	–	–

Notes to the accounts

For the year ended 31st December 2008

43 Related party transactions and Directors' remuneration

(a) Related party transactions

Parties are considered to be related if one party has the ability to control the other party or exercise significant influence over the other party in making financial or operation decisions, or one other party controls both. The definition includes subsidiaries, associates, joint ventures and the Group's pension schemes, as well as other persons.

Subsidiaries

Transactions between Barclays PLC and subsidiaries also meet the definition of related party transactions. Where these are eliminated on consolidation, they are not disclosed in the Group financial statements. Transactions between Barclays PLC and its subsidiary, Barclays Bank PLC are fully disclosed directly in its balance sheet and income statement. A list of the Group's principal subsidiaries is shown in Note 41.

Associates, joint ventures and other entities

The Group provides banking services to its associates, joint ventures, the Group pension funds (principally the UK Retirement Fund) and to entities under common directorships, providing loans, overdrafts, interest and non-interest bearing deposits and current accounts to these entities as well as other services. Group companies, principally within Barclays Global Investors, also provide investment management and custodian services to the Group pension schemes. The Group also provides banking services for unit trusts and investment funds managed by Group companies and are not individually material. All of these transactions are conducted on the same terms as third-party transactions.

Amounts included in the accounts, in aggregate, by category of related party entity are as follows:

	For the year ended and as at 31st December 2008				
	Associates £m	Joint ventures £m	Entities under common directorships £m	Pension funds unit trusts and investment funds £m	Total £m

No guarantees, pledges or commitments have been given or received in respect of these transactions in 2008, 2007 or 2006.

Derivatives transacted on behalf of the Pensions Funds Unit Trusts and Investment Funds amounted to £31.8m (2007: £22m, 2006: £1,209m).

In 2008 Barclays paid £1.2m (2007: £1.8m) of its charitable donations through the Charities Aid Foundation, a registered charitable organisation, in which a Director of the Company is a Trustee.

Note

^a The amounts reported in prior periods have been restated to reflect new related parties.

Notes to the accounts

For the year ended 31st December 2008

43 Related party transactions and Directors' remuneration (continued)

Key Management Personnel

The Group's Key Management Personnel, and persons connected with them, are also considered to be related parties for disclosure purposes. Key Management Personnel are defined as those persons having authority and responsibility for planning, directing and controlling the activities of Barclays PLC (directly or indirectly) and comprise the Directors of Barclays PLC and the Officers of the Group, certain direct reports of the Group Chief Executive and the heads of major business units.

In the ordinary course of business, the Bank makes loans to companies where a Director or other member of Key Management Personnel (or any connected person) is also a Director or other member of Key Management Personnel (or any connected person) of Barclays.

There were no material related party transactions with companies where a Director or other member of Key Management Personnel (or any connected person) is also a Director or other member of Key Management Personnel (or any connected person) of Barclays.

The Group provides banking services to Directors and other Key Management Personnel and persons connected to them. Transactions during the year and the balances outstanding at 31st December 2008 were as follows:

	Directors, other Key Management Personnel and connected persons		
	2008 £m	2007 £m	2006 £m
Loans outstanding at 1st January	7.4	7.8	7.4
Loans issued during the year	6.9	2.7	2.7
Loan repayments during the year	(5.5)	(3.2)	(2.3)
Loans outstanding at 31st December	8.8	7.3	7.8
Interest income earned	0.4	0.4	0.3

No allowances for impairment were recognised in respect of loans to Directors or other members of Key Management Personnel (or any connected person) in 2008, 2007 or 2006.

	2008 £m	2007 £m	2006 £m
Deposits outstanding at 1st January	8.9	15.0	4.7
Deposits received during the year	235.7	114.4	105.2
Deposits repaid during the year	(221.9)	(115.0)	(94.8)
Deposits outstanding at 31st December	22.7	14.4	15.1
Interest expense on deposits	0.5	0.6	0.2

Of the loans outstanding above, £1.6m (2007: £nil, 2006: £nil) relates to Directors and other Key Management Personnel (and persons connected to them) that left the Group during the year. Of the deposits outstanding above, £6.1m (2007: £2.8m, 2006: £0.1m) related to Directors and other Key Management Personnel (and persons connected to them) that left the Group during the year.

All loans are provided on normal commercial terms to Directors and other Key Management Personnel (and persons connected to them), with the exception of £692 of loans which are provided on an interest free basis.

The loans of £692 provided on an interest free basis relate to the granting of loans to one non-Director member of Barclays key management to purchase commuter rail tickets. The commuter rail ticket loans are still provided to all Barclays staff members upon request on the same terms.

All loans to Directors and other key management personnel (a) were made in the ordinary course of business, (b) were made on substantially the same terms, including interest rates and collateral, as those prevailing at the same time for comparable transactions with other persons and (c) did not involve more than a normal risk of collectability or present other unfavourable features.

43 Related party transactions and Directors' remuneration (continued)

Remuneration of Directors and other Key Management Personnel

	Directors, other Key Management Personnel and connected persons

(b) Disclosure required by the Companies Act 1985

The following information is presented in accordance with the Companies Act 1985:

Directors' remuneration

	2008 £m	2007 £m
Aggregate emoluments	6.0	29.2
Gains made on the exercise of share options	–	0.3
Amounts paid under long-term incentive schemes	7.4	–
Actual pension contributions to money purchase scheme (2008: one Director, £11,745 and 2007: one Director, £10,233)	–	–
Notional pension contributions to money purchase scheme (2008: no Directors and 2007: no Directors)	–	–
	13.4	29.5

As at 31 st December 2008, two Directors were accruing retirement benefits under a defined benefit scheme (2007: three Directors).

One Director (Frits Seegers) agreed to waive his fees as non-executive Director of Absa Group Limited and Absa Bank Limited.

The fees for 2008 were ZAR 0.4m (£0.03m). The fees for 2007 were ZAR 0.5m (£0.03m). In both 2007 and 2008 the fees were paid to Barclays.

Directors' and Officers' shareholdings and options

The beneficial ownership of the ordinary share capital of Barclays PLC by all Directors and Officers of Barclays PLC (involving 20 persons) and Barclays Bank PLC (involving 21 persons) at 31 st December 2008 amounted to 8,036,962 ordinary shares of 25p each (0.10% of the ordinary share capital outstanding) and 8,037,498 ordinary shares of 25p each (0.10% of the ordinary share capital outstanding), respectively.

Executive Directors and Officers of Barclays PLC as a group (involving 8 persons) held, at 31 st December 2008, options to purchase 2,185,380 Barclays PLC ordinary shares of 25p each at prices ranging from 255p to 510p under Sharesave and at 397p under the Executive Share Option Scheme and ranging from 317p to 534p under the Incentive Share Option Plan, respectively.

Contracts with Directors (and their connected persons) and Managers

The aggregate amounts outstanding at 31 st December 2008 under transactions, arrangements and agreements made by banking companies within the Group for persons who are, or were during the year, Directors of Barclays PLC and persons connected with them, as defined in the Companies Act 2006, and for Managers, within the meaning of the Financial Services and Markets Act 2000, of Barclays Bank PLC were:

	Number of Directors or Managers	Number of connected persons	Amount £m
Directors			
Loans	1	1	6.1
Quasi-loans and credit card accounts	8	1	–
Managers			
Loans	3	n/a	14.0
Quasi-loans and credit card accounts	7	n/a	–

(c) US disclosures

For US disclosure purposes, the aggregate emoluments of all Directors and Officers of Barclays PLC who held office during the year (2008: 24 persons, 2007: 22 persons, 2006: 24 persons) for the year ended 31 st December 2008 amounted to £26.8m (2007: £64.6m, 2006: £72.1m). In addition, the aggregate amount set aside for the year ended 31 st December 2008, to provide pension benefits for the Directors and Officers amounted to £0.9m (2007: £1.1m, 2006: £0.8m). The aggregate emoluments of all Directors and Officers of Barclays Bank PLC who held office during the year (2008: 25 persons, 2007: 23 persons, 2006: 25 persons) for the year ended 31 st December 2008 amounted to £26.9m, (2007: £64.9m and 2006: £72.2m). In addition, the aggregate amount set aside by the Bank and its subsidiaries for the year ended 31 st December 2008, to provide pension benefits for the Directors and Officers amounted to £0.9m (2007: £1.1m, 2006: £0.8m).

Notes to the accounts

For the year ended 31st December 2008

44 Events after the balance sheet date

On 2nd February 2009, Barclays completed the acquisition of PT Bank Akita, which was announced initially on 17th September 2008, following the approval of the Central Bank of Indonesia.

On 17th February 2009, Barclays announced that Barclays Capital will discontinue operations at its Equifirst subsidiary due to the market environment and strategic direction of the Group.

45 Share-based payments

The Group operates share schemes for employees throughout the world. The main current schemes are:

Sharesave

Eligible employees in the UK, Spain and Ireland may participate in the Barclays Sharesave scheme. Under this scheme, employees may enter into contracts to save up to £250 per month (Ireland: €500, Spain: €135) and, at the expiry of a fixed term of three, five or seven years (Spain: three years), have the option to use these savings to acquire shares in the Company at a discount, calculated in accordance with the rules of the scheme. The discount is currently 20% of the market price at the date the options are granted. Participants in the scheme have six months from the date of vest in which the option can be exercised.

Sharepurchase

Sharepurchase was introduced in January 2002. It is an HM Revenue & Customs approved all-employee share plan. The plan is open to all eligible UK employees, including executive Directors. Under the plan, participants are able to purchase up to £1,500 worth of Barclays PLC ordinary shares per tax year, which, if kept in trust for five years, can be withdrawn from the plan tax-free. Matching shares were introduced to the scheme during 2005 where the purchase of Barclays shares by the participant are matched equally by the Company up to a value of £600 per tax year. Any shares in the plan will earn dividends in the form of additional shares, which must normally be held by the trustee for three years before being eligible for release.

Executive Share Award Scheme (ESAS)

For certain employees of the Group an element of their annual bonus is in the form of a deferred award of a provisional allocation of Barclays PLC shares under ESAS. The total value of the bonus made to the employee of which ESAS is an element is dependent upon the business unit, Group and individual employee performance. The ESAS element of the annual bonus must normally be held for at least three years. Additional bonus shares are subsequently awarded to recipients of the provisional allocation and vest upon achieving continued service for three and five years from the date of award. ESAS awards are also made to eligible employees for recruitment purposes. All awards are subject to potential forfeit if the individual resigns and commences work with a competitor business.

Performance Share Plan (PSP)

The Performance Share Plan (PSP) was approved by shareholders at the 2005 AGM to replace the ISOP scheme. Performance shares are 'free' Barclays shares for which no exercise price is payable and which qualify for dividends. Performance share awards are communicated to participants as an initial allocation. Barclays performance over a three-year period determines the final number of shares that may be released to participants.

Incentive Share Plan (Incentive Shares)

The Incentive Share Plan (Incentive Shares) was introduced in March 2008. Incentive Shares are granted to participants in the form of a provisional allocation of Barclays shares which vest upon achieving continued service after three years. Participants do not pay to receive an award or to receive a release of shares. Incentive Shares qualify for dividends.

Options granted under the following schemes are over subsidiaries of Barclays PLC:

Absa Group Broad-based Black Economic Empowerment Transaction (BEE)

On 25th June 2004, Absa shareholders approved the allocation of 73,152,300, redeemable cumulative option-holding Absa preference shares to Batho Bonke Capital Limited. Each redeemable preference share carries the option to acquire one Absa ordinary share. The shares carry the same rights as ordinary shares including voting rights, and receive dividends which are payable semi-annually. Options vested immediately on date of issue and lapse after five years from the date of issue. Exercise may occur in lots of 100 only and within a price range varying from R48 to R69 (£3.16–£4.55) dependent on the 30-day volume weighted trading price on the JSE Limited. Options are redeemed by Absa on the final exercise date.

45 Share-based payments (continued)

Absa Group Limited Share Incentive Trust (AGLSIT)

In terms of the rules of Absa Group Limited Share Incentive Trust, the maximum number of shares which may be issued or transferred and/or in respect of which options may be granted to the participants shall be limited to shares representing 10% of the total number of issued shares from time to time. This is an equity-settled share-based payment arrangement and options are allocated to Absa employees according to the normal human resources talent management processes. The options issued up to August 2005 had no performance criteria linked to them and vested in equal tranches after three, four and five years respectively. No dividends accrue to the option holder over the vesting period. The options expire after a period of ten years from the issuing date. Options issued since August 2005 have performance criteria associated with them, which require headline earnings per share to exceed an agreed benchmark over a three-year period from the grant date for the options to vest. Participants need to be in the employ of Absa at the vesting date in order to be entitled to the options.

Absa Group Limited Share Ownership Administrative Trust (AGLSOT)

AGLSOT enabled all Absa employees to participate in a one-off offer to purchase 200 redeemable cumulative option-holding preference shares. Each redeemable preference share carries the option to acquire one Absa ordinary share. Options vest after three years and lapse after five years from the date of issue. Exercise may occur in lots of 100 only and within a price range varying from R48 to R69 (£3.16–£4.55) dependent on the 30-day volume weighted trading price on the JSE Limited. Options are redeemed by Absa on the final exercise date.

Absa Group Limited Executive Share Award Scheme (AGLESAS)

The ESAS is an equity-settled share-based payment arrangement, where the participant's notional bonus comprises a number of restricted nil-cost options, based on the allocation price of ordinary shares. Such an initial allocation is held in trust or in the name of the participant. If the participant is in the employ of the Group after the three-year vesting period, the participant will receive 20% matched shares. If the bonus award remains in the ESAS for another two years, the participant receives another 10% matched shares. Dividend shares are paid to participants on the ordinary shares as if the shares were held from inception. The number of dividend shares awarded is therefore calculated on the initial allocation and on the 20% and/or 10% matched shares, over the three- or five-year period. Employees that receive a performance bonus in excess of a predetermined amount were compelled to place a set percentage of their bonus award into the ESAS. Employees also had the option of utilising more of their bonus award for voluntary ESAS options.

In addition, options remain outstanding under the following closed schemes:

Barclays Global Investors Equity Ownership Plan (BGI EOP)

The Equity Ownership Plan was extended to key employees of BGI. The exercise price of the options was determined by the Remuneration Committee of Barclays PLC based on the fair value of BGI as determined by an independent appraiser. The options were granted over shares in Barclays Global Investors UK Holdings Limited, a subsidiary of Barclays Bank PLC.

Options are not exercisable until vesting, with a third of the options held generally becoming exercisable at each anniversary of grant. The shareholder has the right to offer to sell the shares to Barclays Bank PLC 355 days following the exercise of the option. Barclays Bank PLC may accept the offer and purchase the shares at the most recently agreed valuation but is under no obligation to do so. Options lapse ten years after grant. The most recently agreed valuation was £87.22, at 31st March 2008. No awards were made under the BGI EOP in 2008.

Incentive Share Option Plan (ISOP)

The ISOP was open by invitation to the employees and Directors of Barclays PLC. Options were granted at the market price at the date of grant calculated in accordance with the rules of the plan, and are normally exercisable between three and ten years from that date. The final number of shares over which the option may be exercised is determined by reference to set performance criteria. The number of shares under option represents the maximum possible number that may be exercised. No awards were made under ISOP during 2008.

Executive Share Option Scheme (ESOS)

The ESOS is a long-term incentive scheme and was available by invitation to certain senior executives of the Group with grants usually made annually. Options were issued with an exercise price equivalent to the market price at the date of the grant without any discount, calculated in accordance with the rules of the scheme, and are normally exercisable between three and ten years from that date. No further awards are made under ESOS.

Woolwich Executive Share Option Plan (Woolwich ESOP)

Options originally granted over Woolwich PLC shares at market value were exercised in 2001 or exchanged, in accordance with the proposals made under the offer to acquire the Woolwich, for options over Barclays PLC shares. Under the rules of ESOP, the performance conditions attached to the exercise of options were disapplied on acquisition of Woolwich PLC by Barclays. Options lapse ten years after grant.

At the balance sheet date the following cash-settled schemes operated within the Group:

Absa Group Limited Phantom Performance Share Plan (Phantom PSP)

The Phantom PSP is a cash-settled plan and payments made to participants in respect of their awards are in the form of cash. The Phantom PSP shares (and any associated notional dividend shares) are awarded at no cost to the participants. The amount that is ultimately paid to the participants is equal to the market value of a number of ordinary shares as determined after a three-year vesting period. The vesting of the Phantom PSP awards will be subject to two non-market performance conditions which will be measured over a three-year period, starting on the first day of the financial year in which the award is made. The award will vest after three years to the extent that the performance conditions are satisfied. These awards are forfeited in total if Absa performance fails to meet the minimum criteria

Absa Group Limited Phantom Executive Share Award Scheme (Phantom ESAS)

The Phantom ESAS is a cash-settled share-based payment arrangement, where the participant's notional bonus comprises a number of restricted nil-cost options, based on the allocation price of ordinary shares. If the participant is in the employ of the Group after the three-year vesting period, the participant will receive 20% bonus phantom shares. If the bonus award remains in the Phantom ESAS for another two years, the participant receives an additional 10% bonus phantom shares. Dividend phantom shares are paid to participants on the ordinary phantom shares as if the shares were held from inception. The number of dividend phantom shares awarded is therefore calculated on the initial allocation and on the 20% and 10% bonus phantom shares, over the five-year period. Employees that receive performance bonuses in excess of a predetermined amount are compelled to place a set percentage of the bonus award in the Phantom ESAS. Employees also have the option of utilising more of their bonus award for voluntary ESAS phantom shares.

Notes to the accounts

For the year ended 31st December 2008

45 Share-based payments (continued)

The weighted average fair value per option granted during the year is as follows:

	2008 £	2007 £
Sharesave	0.92	1.25
Sharepurchase	3.38	6.84
ISP	4.22	n/a
ESAS	4.09	6.96
PSP	4.89	8.03
BGI EOP	n/a	22.18
AGLSIT	n/a	3.18
AGLESAS	7.17	n/a

Fair values for Sharesave, PSP, BGI EOP and AGLSIT are calculated at the date of grant using either a Black-Scholes model or Monte Carlo simulation. No further grants have been made under the BGI EOP since 2008. Sharepurchase, ESAS, and AGLESAS are nil cost awards on which the performance conditions are substantially completed at the date of grant. Consequently the fair value of these awards is based on the market value at that date.

As described above, the terms of the ESAS scheme require shares to be held for a set number of years from the date of vest. The calculation of the vest date fair value of such awards includes a reduction for this post-vesting restriction. This discount is determined by calculating how much a willing market participant would rationally pay to remove the restriction using a Black-Scholes option pricing model. The total discount required in 2008 is £10m (2007: £66m, 2006: £62m).

The significant weighted average assumptions used to estimate the fair value of the options granted in 2008 are as follows:

	2008		
	Sharesave	PSP	AGLESAS
Weighted average share price	3.11	5.45	7.17
Weighted average exercise price	2.51	2.07	–
Expected volatility	37%	37%	0%
Expected option life	4 years	3 years	5 years

The significant weighted average assumptions used to estimate the fair value of the options granted in 2007 are as follows:

	2007			
	Sharesave	PSP	BGI EOP	AGLSIT
Weighted average share price	5.82	7.07	95.33	9.18
Weighted average exercise price	4.81	–	95.33	7.62
Expected volatility	25%	25%	20%	30%
Expected option life	4 years	3 years	4 years	5 years

The significant weighted average assumptions used to estimate the fair value of the options granted in 2006 are as follows:

	2006			
	Sharesave	PSP	BGI EOP	AGLSIT
Weighted average share price	6.20	6.74	81.12	8.92
Weighted average exercise price	5.11	–	81.12	6.57
Expected volatility	25%	25%	24%	29%
Expected option life	4 years	3 years	4 years	5 years

Expected volatility and dividend yield on the date of grant have been used as inputs into the respective valuation models for Sharesave and PSP. Expected volatility has been determined using historical volatility of its peers over the expected life of the options for BGI EOP and AGLSIT applies a five-year rolling period.

The yield on UK government bonds with a commensurate life has been used to determine the risk-free discount rate of 4% for all schemes other than AGLSIT. Option life is estimated based upon historical data for the holding period of options between grant and exercise dates. The risk-free rate on the AGLSIT scheme represents the yield, recorded on date of option grant, on South African government zero coupon bond of a term commensurate to the expected life of the option.

45 Share-based payments (continued)

For the purposes of determining the expected life and number of options to vest, historical exercise patterns have been used, together with an assumption that a certain percentage of options will lapse due to leavers.

The assumed dividend yield for Barclays PLC is the average annual dividend yield on the date of grant of 5%. Dividend yield for AGLSIT of 3.5% was based on the average 12-month trailing yield over the year to grant date.

Analysis of the movement in the number and weighted average exercise price of options is set out below:

	Sharesave ^a				Sharepurchase ^{a,c}

There were no modifications to the share-based payment arrangements in the years 2008, 2007 and 2006. As at 31st December 2008, the total liability arising from cash-settled share-based payment transactions was £23m (2007: £16m).

At 31st December 2008, 6.6 million (2007: 7.5 million) options were outstanding under the terms of the BGI EOP (which would represent a 7.3% interest if exercised). Employees in BGI own 4.5% of the shares in Barclays Global Investors UK Holdings Limited (2007: 5.9%). If all the current options were exercised, £516.9m (2007: £567.6m) would be subscribed. Since the scheme was introduced, options over 21.5 million (2007: 20.9 million) shares have been exercised, of which 3.8 million are still held by employees and represent a minority interest in the Group.

At 31st December 2008, there were 73.2 million, 10 million and 0.6 million options granted over Absa Group Limited shares under the Absa Group Limited Black Economic Empowerment Transaction, Absa Group Limited Share Incentive Trust and Absa Group Limited Share Ownership Administrative Trust respectively. In aggregate, these options would represent a 11.0% interest in Absa Group Limited if exercised.

Impact of capital raising

During 2008, the number of shares in each award or option has been increased by 2.68% and any corresponding option exercise price has been decreased by 2.68% to reflect the impact of the capital raising in July. No adjustments were made for any other capital raising during 2008.

Notes

- a Options/award granted over Barclays PLC shares.
- b Options/award granted over Barclays Global Investors UK Holdings Limited shares.
- c Options/award granted over Absa Group Limited shares.
- d Nil cost award.

Notes to the accounts

For the year ended 31st December 2008

46 Financial risks

Financial risk management

Barclays PLC is a major global financial services provider engaged in retail and commercial banking, credit cards, investment banking, wealth management and investment management services. Financial instruments are fundamental to the Group's business and managing financial risks, especially credit risk, is a fundamental part of its business activity.

Barclays risk management policies and processes are designed to identify and analyse risk, to set appropriate risk appetite, limits, and controls, and to monitor the risks and adherence to limits by means of reliable and up-to-date data. Risk management policies, models and systems are regularly reviewed to reflect changes to markets, products and best market practice.

Risk responsibilities

The Board approves risk appetite and the Board Risk Committee monitors the Group's risk profile against this appetite:

- The Group Risk Director, under delegated authority from the Group Chief Executive and Group Finance Director, has responsibility for ensuring effective risk management and control;
- Business Heads are responsible for the identification and management of risk in their businesses;
- Business risk teams, each under the management of a Business Risk Director, are responsible for assisting Business Heads in the identification and management of their business risk profiles for implementing appropriate controls. These risk management teams also assist Group Risk in the formulation of Group Risk policy and the implementation of it across the businesses;
- Within Group Risk, Risk-Type Heads and their teams are responsible for establishing a risk control framework and risk oversight; and
- Internal Audit is responsible for the independent review of risk management and the control environment.

Oversight of risk management is exercised by the Risk Oversight Committee which is chaired by the Group Risk Director under authority delegated by the Group Finance Director. The Risk Oversight Committee oversees management of the Group's risk profile, exercised through the setting, review and challenge of the size and constitution of the profile when viewed against the Group risk appetite.

The Executive Committee monitors and manages risk-adjusted performance of businesses and receives a regular update on forward risk trends and the Group Risk Profile Report.

The Board Risk Committee (BRC) reviews the Group risk profile, approves the Group Control Framework and approves minimum control requirements for principal risks.

The Board Audit Committee (BAC) considers the adequacy and effectiveness of the Group Control Framework and receives quarterly reports on control issues of significance and half-yearly reports on impairment allowances and regulatory reports.

Both BRC and BAC also receive reports dealing in more depth with specific issues relevant at the time. The proceedings of both Committees are reported to the full Board. The Board approves the overall Group risk appetite.

The Risk Oversight Committee is chaired by the Group Risk Director and oversees the management of the Group's risk profile and all of its significant risks. Oversight is exercised through the setting, review and challenge of the size and constitution of the profile when viewed against the Group's risk appetite. It has delegated and apportioned responsibility for credit risk management to the Retail and Wholesale Credit Risk Management Committees.

The main financial risks affecting the Group are discussed in Notes 47 to 49.

47 Credit risk

Credit risk is the risk of suffering financial loss, should any of the Group's customers, clients or market counterparties fail to fulfil their contractual obligations to the Group. Credit risk arises mainly from commercial and consumer loans and advances, credit cards, and loan commitments arising from such lending activities, but can also arise from credit enhancement provided, such as financial guarantees, letters of credit, endorsements and acceptances.

Barclays is also exposed to other credit risks arising from investments in debt securities and other exposures arising from its trading activities ('trading exposures') including, non-equity trading portfolio assets, derivatives as well as settlement balances with market counterparties and reverse repurchase loans.

Losses arising from exposures held for trading (derivatives, debt securities) are accounted for as trading losses, rather than impairment charges, even though the fall in value causing the loss may be attributable to credit deterioration.

Maximum exposure to credit risk before collateral held or other credit enhancements

The following table presents the maximum exposure at 31st December 2008 and 2007 to credit risk of balance sheet and off balance sheet financial instruments, before taking account of any collateral held or other credit enhancements and after allowance for impairment and netting where appropriate.

For financial assets recognised on the balance sheet, the exposure to credit risk equals their carrying amount. For financial guarantees granted, the maximum exposure to credit risk is the maximum amount that Barclays would have to pay if the guarantees were to be called upon. For loan commitments and other credit related commitments that are irrevocable over the life of the respective facilities, the maximum exposure to credit risk is the full amount of the committed facilities.

This analysis and all subsequent analyses of credit risk include only financial assets subject to credit risk. They exclude other financial assets, mainly equity securities held in trading portfolio or available for sale as well as non-financial assets. The nominal value of off-balance sheet credit related instruments are also shown, where appropriate.

Financial assets designated at fair value held in respect of linked liabilities to customers under investment contracts have not been included as the Group is not exposed to credit risk on these assets. Credit losses in these portfolios, if any, would lead to a reduction in the linked liabilities and result in no direct loss to the Group.

47 Credit risk (continued)

Whilst the Group's maximum exposure to credit risk is the carrying value of the assets or, in the case of off-balance sheet items, the amount guaranteed, committed, accepted or endorsed, in most cases the likely exposure is far less due to collateral, credit enhancements and other actions taken to mitigate the Group's exposure.

A description of the credit risk management and measurement methodologies, the credit quality of the assets and the collateral and other credit enhancements held against them is included in the relevant sections within this Note, for each of the categories in the following table:

At 31st December 2008

47 Credit risk (continued)

Credit risk concentrations

A concentration of credit risk exists when a number of counterparties are engaged in similar activities and have similar economic characteristics that would cause their ability to meet contractual obligations to be similarly affected by changes in economic or other conditions.

The analyses of credit risk concentrations presented below are based on the location of the counterparty or customer or the industry in which they are engaged.

Credit risk concentrations by geographical sector

Loans and advances to customers in the above table has been reanalysed between Agriculture, Manufacturing and Wholesale and retail trade, Residential mortgage loans and Other personal to reflect changes in classification of assets.

Notes to the accounts

For the year ended 31st December 2008

47 Credit risk (continued)

Loans and advances

Credit risk management

Governance and responsibilities

The credit risk management teams in each business are accountable to the Business Risk Directors in those businesses who, in turn, report to the heads of their businesses and also to the Group Risk Director.

The credit risk function provides Group-wide direction of credit risk-taking. The teams within this function manage the resolution of all significant credit policy issues and run the Credit Committee, which approves major credit decisions. Each business segment has an embedded credit risk management team. These teams assist Group Risk in the formulation of Group Risk policy and its implementation across the businesses.

The principal committees that review credit risk management, formulate overall Group credit policy and resolve all significant credit policy issues are the Wholesale Credit Risk Management Committee, the Retail Credit Risk Management Committee, the Risk Oversight Committee and the Board Risk Committee.

The Retail Credit Risk Management Committee (RCRMC) oversees exposures, which comprise unsecured personal lending (including small businesses), mortgages and credit cards. The RCRMC monitors the risk profile and performance of the retail portfolios by receipt of key risk measures and indicators at an individual portfolio level, ensuring mitigating actions taken to address performance are appropriate and timely. Metrics reviewed will consider portfolio composition and both an overall stock and new flow level.

The Wholesale Credit Risk Management Committee (WCRMC) oversees wholesale exposures, comprising lending to businesses, banks and other financial institutions. The WCRMC monitors exposure by country, industry sector, individual large exposures and exposures to sub-investment grade countries.

The monthly Wholesale and Retail Credit Risk Management Committees exercise oversight through review and challenge of the size and constitution of the portfolios when viewed against Group risk appetite for wholesale and retail credit risks. They are chaired by the Group Wholesale and Retail Credit Risk Directors.

Credit monitoring

Wholesale and corporate loans which are deemed to contain heightened levels of risk are recorded on early-warning or watch lists. These lists are graded in line with the perceived severity of the risk attached to the lending and its probability of default. The lists are updated on a monthly basis and are closely monitored.

Regardless of whether they are recorded on early-warning or watch lists, all wholesale and corporate loans are subject to a full review of all facilities on, at least, an annual basis. More frequent interim reviews may be undertaken should circumstances dictate.

Retail loans (which tend to comprise homogeneous assets) are monitored on a portfolio basis.

Credit risk measurement

Barclays uses statistical modelling techniques throughout its business in its credit rating systems. They enable a coherent approach to risk measurement across all credit exposures, retail and wholesale. The key building blocks in the measurement system are the probability of customer default (PD), exposure in the event of default (EAD), and severity of loss-given-default (LGD). The models are reviewed regularly to monitor their robustness relative to actual performance and amended as necessary to optimise their effectiveness.

For wholesale and corporate lending, Barclays assesses the credit quality of borrowers and other counterparties and assigns them an internal risk rating. Barclays credit rating contains 21 grades, representing the Group's best estimate of credit risk for a counterparty based on current economic conditions. Retail customers are not all assigned internal risk ratings in this way for account management purposes, therefore their probability of default is considered.

The Group considers Credit Risk Loans (defined as all customers overdue by 90 days or more, and/or individually impaired or restructured) and loan loss rates when assessing the credit performance of its loan portfolios, other than those held at fair value. For the purposes of historical and business unit comparison, loan loss rates are defined as total credit impairment charge (excluding available for sale assets and reverse repurchase agreements) divided by gross loans and advances to customers and banks (at amortised cost).

Credit risk mitigation

Where appropriate, the Group takes action to mitigate credit risk such as reducing amounts outstanding (in discussion with the customers, clients or counterparties if appropriate), using credit derivatives, securitising assets; and selling them.

Diversification to avoid unwanted credit risk concentrations is achieved through setting maximum exposure guidelines to individual counterparties. Excesses are reported to the Risk Oversight Committee and the Board Risk Committee. Mandate and scale limits are used to limit the stock of current exposures in a loan portfolio and the flow of new exposures into a loan portfolio. Limits are typically based on the tenor and nature of the lending.

Collateral and security

The Group routinely obtains collateral and security to mitigate credit risk.

The Group ensures that any collateral held is sufficiently liquid, legally effective, enforceable and regularly reassessed. Before attaching value to collateral, businesses holding specific, agreed classes of collateral must ensure that they are holding a correctly perfected charge.

Before reliance is placed on third party protection in the form of bank, government or corporate guarantees or credit derivative protection from financial intermediary counterparties, a credit assessment is undertaken.

Security structures and legal covenants are subject to regular review, at least annually, to ensure that they remain fit for purpose and remain consistent with accepted local market practice.

47 Credit risk (continued)

All loans and advances are categorised as either:

- neither past due nor individually impaired;
- past due but not individually impaired; or
- individually impaired.

The impairment allowance includes allowances against financial assets that have been individually impaired and those subject to collective impairment.

Credit risk loans comprise loans and advances to banks and customers 90 days overdue or more and those subject to individual impairment. The coverage ratio is calculated by reference to the total impairment allowance and the carrying value (before impairment) of credit risk loans.

Wholesale and corporate loans and advances	141,868	94,453	10,184	246,505	114,693	54,828	2,428	171,949
Finance lease receivables	4,214	7,504	649	12,367	4,586	6,036	268	10,890
Total loans and advances	302,599	197,768	14,885	515,252	234,546	143,434	8,794	386,774

For the purposes of the analysis of credit quality, the following internal measures of credit quality have been used:

Financial statements description	Retail lending	Wholesale lending	
	Probability of default	Probability of default	Default grade
Strong	0.0-0.60%	0.0-0.05%	1-3
		0.05-0.15%	4-5
		0.15-0.30%	6-8
		0.30-0.60%	9-11
Satisfactory	0.60-10.00%	0.60-2.15%	11-14
		2.15-11.35%	15-19
Higher risk	10.00% +	11.35% +	20-21

Financial statement descriptions can be summarised as follows:

Strong – there is a very high likelihood of the asset being recovered in full.

Satisfactory – whilst there is a high likelihood that the asset will be recovered and therefore, of no cause for concern to the Group, the asset may not be collateralised, or may relate to retail facilities, such as credit card balances and unsecured loans, which have been classified as satisfactory, regardless of the fact that the output of internal grading models may have indicated a higher classification. At the lower end of this grade there are customers that are being more carefully monitored, for example, corporate customers which are indicating some evidence of some deterioration, mortgages with a high loan to value ratio, and unsecured retail loans operating outside normal product guidelines.

Higher risk – there is concern over the obligor's ability to make payments when due. However, these have not yet converted to actual delinquency. There may also be doubts over value of collateral or security provided. However, the borrower or counterparty is continuing to make payments when due and is expected to settle all outstanding amounts of principal and interest.

47 Credit risk (continued)

Loans and advances that are past due but not individually impaired

An age analysis of loans and advances that are past due but not individually impaired is set out below.

For the purposes of this analysis an asset is considered past due and included below when any payment due under strict contractual terms is received late or missed. The amount included is the entire financial asset, not just the payment, of principal or interest or both, overdue.

The table below provides a breakdown of total financial assets past due but not individually impaired. In general, retail and wholesale loans fall into this category for two separate reasons. Retail loans and advances to customers may come under this category because the impairment allowance on such loans is calculated on a collective – not individual – basis. This reflects the homogenous nature of the assets, which allows statistical techniques to be used, rather than individual assessment.

In contrast, some loans to wholesale and corporate customers and banks may come under this category because of instances where a payment on a loan is past due without requiring an individual impairment allowance. For example, an individual impairment allowance will not be required when a loss is not expected due to a corporate loan being fully secured or collateralised. As a result, it is past due but not individually impaired.

	2008						Of which Credit Risk Loans £m

47 Credit risk (continued)

Renegotiated loans and advances

Loans and advances are generally renegotiated either as part of an ongoing customer relationship or in response to an adverse change in the circumstances of the borrower. In the latter case renegotiation can result in an extension of the due date of payment or repayment plans under which the Group offers a concessionary rate of interest to genuinely distressed borrowers. This will result in the asset continuing to be overdue and will be individually impaired where the renegotiated payments of interest and principal will not recover the original carrying amount of the asset. In other cases, renegotiation will lead to a new agreement, which is treated as a new loan.

Collateral and other credit enhancements held

Financial assets that are past due or individually assessed as impaired may be partially or fully collateralised or subject to other forms of credit enhancement.

Assets in these categories subject to collateralisation are mainly corporate loans, residential mortgage loans and finance lease receivables. Credit card receivables and other personal lending are generally unsecured (although in some instances a charge over the borrowers property of other assets may be sought).

Corporate loans

Security is usually taken in the form of a fixed charge over the borrower's property or a floating charge over the assets of the borrower. Loan covenants may be put in place to safeguard the Group's financial position. If the exposure is sufficiently large, either individually or at the portfolio level, credit protection in the form of guarantees, credit derivatives or insurance may be taken out.

For these and other reasons collateral given is only accurately valued on origination of the loan or in the course of enforcement actions and as a result it is not practicable to estimate the fair value of the collateral held.

Residential mortgage loans

These are secured by a fixed charge over the property.

A description and the estimated fair value of collateral held in respect of residential mortgage loans that are past due or individually assessed as impaired is as follows:

Nature of assets	2008	2007
	Fair value £m	Fair value £m
Residential property	7,264	6,488

Collateral included in the above table reflects the Group's interest in the property in the event of default. That held in the form of charges against residential property in the UK is restricted to the outstanding loan balance. In other territories, where the Group is not obliged to return any sale proceeds to the mortgagee, the full estimated fair value has been included.

Finance lease receivables

The net investment in the lease is secured through retention of legal title to the leased assets.

Collateral and other credit enhancements obtained

The carrying value of assets held by the Group as at 31st December 2008 as a result of the enforcement of collateral was as follows:

Nature of assets	2008	2007
	Carrying amount £m	Carrying amount £m
Residential property	171	34
Commercial and industrial property	2	1
Other credit enhancements	61	–
Total	234	35

Any properties repossessed are made available for sale in an orderly and timely fashion, with any proceeds realised being used to reduce or repay the outstanding loan. For business customers, in some circumstances, where excess funds are available after repayment in full of the outstanding loan, they are offered to any other, lower ranked, secured lenders. Any additional funds are returned to the customer. Barclays does not, as a rule, occupy repossessed properties for its business use.

The Group does not use assets obtained in its operations. Assets obtained are normally sold, generally at auction, or realised in an orderly manner for the maximum benefit of the Group, the borrower and the borrower's other creditors in accordance with the relevant insolvency regulations.

Notes to the accounts

For the year ended 31st December 2008

47 Credit risk (continued)

Debt securities

Trading portfolio assets, financial assets designated at fair value and available for sale assets are measured on a fair value basis. The fair value will reflect, among other things, the credit risk of the issuer.

Most listed and some unlisted securities are rated by external rating agencies. The Group mainly uses external credit ratings provided by Standard & Poors' or Moody's. Where such ratings are not available or are not current, the Group will use its own internal ratings for the securities.

An analysis of the credit quality of the Group's debt securities is set out below:

	2008				2007			
	AAA to BBB- (investment grade) £m	BB+ to B £m	B- and below £m	Total £m	AAA to BBB- (investment grade) £m	BB+ to B £m	B- and below £m	Total £m
Trading portfolio:								
Treasury and other eligible bills	4,491	53	–	4,544	1,984	110	–	2,094
Debt securities	141,454	5,556	1,676	148,686	143,161	8,958	659	152,778
Total trading portfolio	145,945	5,609	1,676	153,230	145,145	9,068	659	154,872
Financial assets designated at fair value held on own account:								
Debt securities	1,222	7,406	–	8,628	10,010	14,207	–	24,217
Available for sale financial investments:								
Treasury and other eligible bills	2,823	1,180	–	4,003	2,130	593	–	2,723
Debt securities	55,817	2,347	667	58,831	36,623	1,528	522	38,673
Total available for sale financial investments	58,640	3,527	667	62,834	38,753	2,121	522	41,396
Total debt securities	205,807	16,542	2,343	224,692	193,908	25,396	1,181	220,485
%	91.6	7.4	1.0	100.0	88.0	11.5	0.5	100

In addition to the above, there are impaired available for sale debt securities with a carrying value at 31st December 2008 of £329m (2007: £432m), after a write-down of £363m (2007: £13m).

Collateral is not generally obtained directly from the issuers of debt securities. Certain debt securities may be collateralised by specifically identified assets that would be obtained in the event of default.

Derivatives

Derivatives are measured on a fair value basis.

The credit quality of the Group's derivative assets according to the credit quality of the counterparty at 31st December 2008 and 2007 was as follows:

	2008				2007			
	AAA to BBB- (investment grade) £m	BB+ to B £m	B- and below £m	Total £m	AAA – BBB- (investment grade) £m	BB+ to B £m	B- and below £m	Total £m
Derivatives	939,071	42,266	3,465	984,802	243,491	3,630	967	248,088
%	95.3	4.3	0.4	100.0	98.1	1.5	0.4	100.0

Credit risk from derivatives is mitigated where possible through netting agreements whereby derivative assets and liabilities with the same counterparty can be offset. Group policy requires all netting arrangements to be legally documented. The ISDA Master Agreement is the Group's preferred agreement for documenting OTC derivatives. It provides the contractual framework within which dealing activities across a full range of OTC products are conducted and contractually binds both parties to apply close-out netting across all outstanding transactions covered by an agreement if either party defaults or other pre-determined events occur.

Collateral is obtained against derivative assets, depending on the creditworthiness of the counterparty and/or nature of the transaction. Any collateral taken in respect of OTC trading exposures will be subject to a 'haircut' which is negotiated at the time of signing the collateral agreement. A haircut is the valuation percentage applicable to each type of collateral and will be largely based on liquidity and price volatility of the underlying security. The collateral obtained for derivatives is either cash, direct debt obligation government (G14+) bonds denominated in the domestic currency of the issuing country, debt issued by supnationals or letters of credit issued by an institution with a long-term unsecured debt rating of A+/A3 or better. Where the Group has ISDA master agreements, the collateral document will be the ISDA Credit Support Annex (CSA). The collateral document must give Barclays the power to realise any collateral placed with it in the event of the failure of the counterparty, and to place further collateral when requested or in the event of insolvency, administration or similar processes, as well as in the case of early termination.

Derivative assets and liabilities would be £917,074m (2007: £215,585m) lower than reported if netting were permitted for assets and liabilities with the same counterparty or for which the Group holds cash collateral.

47 Credit risk (continued)

Reverse repurchase agreements

Reverse repurchase agreements and securities borrowing arrangements are collateralised loans typically of short maturities.

The loans are fully collateralised with highly liquid securities legally transferred to the Group. The level of collateral is monitored daily and further collateral called when required.

	2008				2007			
	AAA to BBB- (investment grade) £m	BB+ to B £m	B- and below £m	Total £m	AAA to BBB- (investment grade) £m	BB+ to B £m	B- and below £m	Total £m
Financial assets designated at fair value held on own account:								
Other financial assets	3,882	3,401	–	7,283	3,056	–	–	3,056
Reverse repurchase agreements	122,188	6,101	2,065	130,354	180,637	2,391	47	183,075
Total Reverse repurchase agreements	126,070	9,502	2,065	137,637	183,693	2,391	47	186,131
%	91.6	6.9	1.5	100.0	98.7	1.3	–	100.0

No reverse repurchase agreements held by the Group at 31st December 2008 or 2007 were individually impaired, however during the year, the Group wrote off £124m of reverse repurchase agreements (2007: £nil).

Other credit risk assets

The Group's other assets that are subject to credit risk are cash with central banks of £30,019m (2007: £5,801m), items in course of collection from other Banks £1,695m (2007: £1,836m), other financial assets £3,096m (2007: £3,966m).

Cash and balances at central banks

Substantially all balances are held with central banks. There is limited credit risk in relation to balances at central banks.

Items in the course of collection from other banks

There is limited credit risk in relation to items in the course of collection through the clearing system from other banks.

Other financial assets

Other financial assets comprise £3,096m (2007: £3,966m) of other assets and £609m (2007: £548m) of assets held at fair value.

Off-balance sheet

The Group applies fundamentally the same risk management policies for off-balance sheet risks as it does for its on-balance sheet risks. In the case of commitments to lend, customers and counterparties will be subject to the same credit management policies as for loans and advances. Collateral may be sought depending on the strength of the counterparty and the nature of the transaction.

Credit market exposures

Barclays Capital's credit market exposures primarily relate to US residential mortgages, commercial mortgages and leveraged finance businesses that have been significantly impacted by the continued deterioration in the global credit markets. The exposures include both significant positions subject to fair value movements in the profit and loss account and positions that are classified as loans and advances and available for sale. None of the exposure disclosed below has been reclassified to loans and advances under the amendments to IAS 39.

The exposures are set out by asset class below:

	As at 31.12.08 £m	As at 31.12.07 £m
US Residential Mortgages		
ABS CDO Super Senior	3,104	4,671
Other US sub-prime	3,441	5,037
Alt-A	4,288	4,916
US RMBS exposure wrapped by monoline insurers	1,639	730
Commercial mortgages		
Commercial real estate	11,578	11,103
Commercial mortgage-backed securities	735	1,296
CMBS exposure wrapped by monoline insurers	1,854	197
Other Credit Market Exposures		
Leveraged finance	10,391	9,027
SIVs and SIV-Lites	963	784
CDPCs	150	19
CLO and other exposure wrapped by monoline insurers	4,939	408

Notes to the accounts

For the year ended 31st December 2008

48 Market risk

Market risk management

Market risk is the risk that Barclays earnings or capital, or its ability to meet business objectives, will be adversely affected by changes in the level or volatility of market rates or prices such as interest rates, credit spreads, commodity prices, equity prices and foreign exchange rates. Market risk mainly arises from trading activities. Barclays is also exposed to market risk through interest rate risk on its non-trading activities and through the pension fund.

Organisation and structure

The Board approves market risk appetite for trading and non-trading activities. The Market Risk Director is responsible for the Market Risk Control Framework and, under delegated authority from the Group Risk Director, sets a limit framework within the context of the approved market risk appetite. A daily market risk report summarises Barclays market risk exposures against agreed limits. This daily report is sent to the Group Risk Director, the Market Risk Director, the Group Finance Director and the appropriate Business Risk Directors.

The head of each business, assisted by the business risk management team, is accountable for all market risks associated with its activities. Each business is responsible for the identification, measurement, management, control and reporting of market risk as outlined in Barclays Market Risk Control Framework. Oversight and support is provided to the business by the Market Risk Director, assisted by the central market risk team. The Market Risk Committee reviews, approves, and makes recommendations concerning the market risk profile across Barclays including risk appetite, limits and utilisation. The Committee meets monthly and is chaired by the Market Risk Director. Attendees include the Risk Director, respective business risk managers and senior managers from the central market risk team.

Traded market risk

Barclays policy is to concentrate trading activities in Barclays Capital. This includes transactions where Barclays Capital acts as principal with clients or with the market. For maximum efficiency, client and market activities are managed together.

Risk measurement and control

The measurement techniques used to measure and control traded market risk include Daily Value at Risk (DVaR), Expected Shortfall (ES), stress testing and scenario testing.

DVaR is an estimate of the potential loss arising from unfavourable market movements, if the current positions were to be held unchanged for one business day. Barclays Capital uses the historical simulation method with a two year unweighted historical period.

In 2008, the confidence level was changed to 95% from 98% as an increasing incidence of significant market movements made the existing measure more volatile and less effective for risk management purposes. Switching to 95% made DVaR more stable and consequently improved management, transparency and control of the market risk profile.

The historical simulation calculation can be split into three parts:

- Calculate hypothetical daily profit or loss for each position over the most recent two years, using observed daily market moves.
- Sum hypothetical profit or losses, for day 1 giving one total profit or loss. This is repeated for all other days in the two year history.
- DVaR is the 95th percentile selected from the two years of daily hypothetical total profit or loss.

The DVaR model has been approved by the FSA to calculate regulatory capital for the trading book. The approval covers general market risk in interest rate, foreign exchange, commodities and equity products, and issuer specific risk for the majority of single name and portfolio traded credit products.

DVaR is an important market risk measurement and control tool and consequently the model is regularly assessed. The main approach employed is the technique known as back-testing which counts the number of days when a loss (as defined by the FSA in BIPRU 7.10), exceeds the corresponding DVaR estimate, measured at the 99% confidence level.

The FSA categorises a DVaR model as green (being best), amber or red. A green model is consistent with a good working DVaR model and is achieved for models that have four or less back-testing exceptions in a 12-month period. For Barclays Capital's trading book, green model status was maintained for 2008 and 2007.

48 Market risk (continued)

To further improve the control framework, formal daily monitoring of ES was started. This metric is the average of all the hypothetical losses beyond DVaR. Other controls, includes stress testing and scenario testing.

Stress testing provides an indication of the potential size of losses that could arise in extreme conditions. It helps to identify risk concentrations across business lines and assist senior management in capital planning decisions. A variety of different types of stress tests are performed in order to fulfil the objectives of stress testing. The global asset class stress tests have been designed to cover major asset classes including interest rate, credit spread, commodity, equity, foreign exchange rates and emerging markets.

Stress results are produced at least fortnightly. If a potential stress loss exceeds the corresponding trigger limit, the positions captured by the stress test are reviewed and discussed by Barclays Capital market risk management and the respective Barclays Capital business heads. The minutes of the discussion, including the merits of the position and the appropriate course of action, are then sent to the Market Risk Director for review.

Scenario tests are hypothetical events which could lead to extreme yet plausible stress type moves under which profitability is seriously challenged. The scenarios are devised by senior risk managers and economists and are reviewed quarterly. Examples include 'Global pandemic', 'Problems with GBP sovereign issuances' and 'Liquidity crisis'. The scenarios are calculated at least fortnightly and the results are included in the Traded Positions Risk Review meeting information pack.

Analysis of traded market risk exposures

Barclays Capital market risk exposure, as measured by average total DVaR (95%), increased by 64% to £53.4m in 2008. This was mainly due to higher market volatility within the credit spread and interest rate DVaRs.

Total DVaR increased significantly in the fourth quarter, mainly due to extreme market volatility following the failure of several financial intuitions and a material deterioration in the global economic outlook. Total DVaR (95%) at 31st December 2008 was £86.6m (31st December 2007: £39.6m), which was within limit.

On a 98% basis, average total DVaR increased 82% to £76.5m.

The daily average, maximum and minimum values of DVaR, 95% and 98%, were calculated as below.

DVaR (95%)

	12 months to 31st December 2008			12 months to 31st December 2007		
	Average £m	High £m	Low £m	Average £m	High £m	Low £m
Interest rate risk	28.9	47.8	15.1	15.3	26.5	10.0
Credit spread risk	31.1	71.7	15.4	17.3	28.0	10.8
Commodity risk	18.1	25.4	12.5	15.3	19.0	10.7
Equity risk	9.1	21.0	4.8	8.0	12.1	4.5
Foreign exchange risk	5.9	13.0	2.1	3.8	7.2	2.1
Diversification effect ^a	(39.7)	n/a	n/a	(27.2)	n/a	n/a
Total DVaR	53.4	95.2	35.5	32.5	40.9	25.2

DVaR (98%)

	12 months to 31st December 2008			12 months to 31st December 2007		
	Average £m	High £m	Low £m	Average £m	High £m	Low £m
Interest rate risk	45.0	80.9	21.0	20.0	33.3	12.6
Credit spread risk	54.0	143.4	30.1	24.9	43.3	14.6
Commodity risk	23.9	39.6	16.5	20.2	27.2	14.8
Equity risk	12.8	28.9	6.7	11.2	17.6	7.3
Foreign exchange risk	8.1	21.0	2.9	4.9	9.6	2.9
Diversification effect ^a	(67.3)	n/a	n/a	(39.2)	n/a	n/a
Total DVaR	76.5	158.8	47.5	42.0	59.3	33.1

The average ES in 2008 was £70.0m, a rise of £34.7m compared with 2007.

Note

^a The high (and low) DVaR figures reported for each category did not necessarily occur on the same day as the high (and low) DVaR reported as a whole. Consequently a diversification effect number for the high (and low) DVaR figures would not be meaningful and it is therefore omitted from the above table.

Notes to the accounts

For the year ended 31st December 2008

48 Market risk (continued)

Non-trading interest rate risk

Non-traded interest rate risk arises from the provision of retail and wholesale (non-traded) banking products and services.

Barclays objective is to minimise non-traded risk. This is achieved by transferring risk from the business to a local treasury or Group Treasury, who in turn hedge the net exposure with the external market. Limits exist to ensure no material risk is retained within any business or product area. The majority of exposures are within Global Retail and Commercial Banking.

Risk measurement and control

The techniques used to measure and control non-traded interest rate risk include Annual Earnings at Risk, DVaR and Stress Testing. Book limits such as foreign exchange and interest position limits are also in place.

Annual Earnings at Risk (AEaR) measures the sensitivity of net interest income (NII) over the next 12 months. It is calculated as the difference between the estimated income using the current yield curve and the lowest estimated income following a 100 basis points increase or decrease in interest rates.

DVaR is also used as a complementary tool to AEaR.

Stress testing is also carried out by the business centres and is reviewed by senior management and business-level asset and liability committees. The stress testing is tailored to the business and typically incorporates scenario analysis and historical stress movements applied to respective portfolios.

Analysis of Net Interest Income sensitivity

The tables below show the pre-tax net interest income sensitivity for the non-trading financial assets and financial liabilities held at 31st December 2008. The sensitivity has been measured using AEaR methodology as described above. The benchmark interest rate for each currency is set as at 31st December 2008. The figures include the effect of hedging instruments but exclude exposures held or issued by Barclays Capital as these are measured and managed using DVaR.

Net interest income sensitivity (AEaR) by currency

	+100 basis points 2008 £m	-100 basis points 2008 £m	+100 basis points 2007 £m	-100 basis points 2007 £m
GBP	3	(273)	36	(37)
USD	(25)	7	(3)	1
EUR	(34)	30	(23)	23
ZAR	13	(13)	19	(19)
Others	–	(8)	4	(5)
Total	(43)	(257)	33	(37)
As percentage of net interest income	(0.37%)	(2.24%)	0.34%	(0.39%)

Non-traded interest rate risk, as measured by AEaR, was £257m in 2008, an increase of £220m compared to 2007. This estimate takes into account the rates in place as at 31st December 2008. The increase mainly reflects the reduced spread generated on retail and commercial banking liabilities in the lower interest rate environment. If the interest rate hedges had not been in place then the AEaR risk for 2008 would have been £670m.

DVaR is also used to control market risk in GRCB – Western Europe, and Group Treasury. The indicative average DVaRs for 2008, using a simplified DVaR approach, were £1.3m and £0.6m respectively.

Analysis of Equity sensitivity

	+100 basis points 2008 £m	-100 basis points 2008 £m	+100 basis points 2007 £m	-100 basis points 2007 £m
Net interest income	(43)	(257)	33	(37)
Taxation effects on the above	6	33	(9)	10
Effect on profit for the year	(37)	(224)	24	(27)
As percentage of net profit after tax	(0.70%)	(4.24%)	0.47%	(0.53%)
Effect on profit for the year (per above)	(37)	(224)	24	(27)
Available for sale reserve	(806)	806	(390)	390
Cash flow hedging reserve	(473)	474	(476)	476
Taxation effects on the above	166	(166)	242	(242)
Effect on equity	(1,150)	890	(600)	597
As a percentage of equity	(2.43%)	1.88%	(1.85%)	1.84%

48 Market risk (continued)

Foreign exchange risk

The Group is exposed to two sources of foreign exchange risk.

(a) Transactional foreign currency exposure

Transactional foreign exchange exposures represent exposure on banking assets and liabilities, denominated in currencies other than the functional currency of the transacting entity.

The Group's risk management policies prevent the holding of significant open positions in foreign currencies outside the trading portfolio managed by Barclays Capital which is monitored through DVaR.

There were no material net transactional foreign currency exposures outside the trading portfolio at either 31st December 2008 or 2007. Due to the low level of non-trading exposures no reasonably possible change in foreign exchange rates would have a material effect on either the Group's profit or movements in equity for the year ended 31st December 2008 or 2007.

(b) Translational foreign exchange exposure

The Group's translational foreign currency exposure arises from both its capital resources (including investments in subsidiaries and branches, intangible assets, minority interests and debt capital) and risk weighted assets denominated in non-Sterling currencies. Changes in foreign exchange rates result in changes in the Sterling equivalent value of non-Sterling denominated capital resources and risk weighted assets. As a result, the Group's regulatory capital ratios are sensitive to foreign exchange rate movements.

The Group's hedge strategy is to minimise the volatility of all capital ratios whilst taking into account the impact on hedging of non-Sterling net investments, the cost of hedging, the availability of a suitable foreign exchange market and prevailing foreign exchange rates.

To minimise volatility in the equity ratio, the Group aims over time to maintain the ratio of foreign currency equity capital resources to RWAs the same as the Group's equity ratio. To create equity capital resources denominated in non-Sterling currencies, the Group leaves some investments in core non-Sterling subsidiaries and branches un-hedged. The resultant change in the Sterling value of the investments is captured in the currency translation reserve, resulting in an equity capital movement.

Depending on the value of non-Sterling net investments, it may not always be possible to maintain the ratio, leaving some capital ratio sensitivity to foreign exchange movements.

The proceeds from equity accounted foreign currency preference shares are also used in the equity ratio hedge. If a preference share is redeemed, the cumulative movement in the currency translation reserve will be offset by an equal and opposite movement in other reserves reflecting the revaluation of the preference shares to prevailing foreign exchange rates.

The exposure of Tier 1 and Total capital ratios is managed by issuing, where possible, debt capital in non-Sterling currencies such that the ratio of Tier 1 and total capital resources to risk weighted assets is the same as the Group's Tier 1 and Total capital ratios. This is primarily achieved by the issuance of debt capital from Barclays Bank PLC in major currencies, but can also be achieved by subsidiaries issuing capital in local currencies.

The carrying value of the Group's foreign currency net investments in subsidiaries and branches and the foreign currency borrowings and derivatives used to hedge them as at 31st December 2008 were as follows:

At 31st December 2008

Functional currency of the operation involved

	Foreign currency net investments £m	Borrowings which hedge the net investments £m	Derivatives which hedge the net investments £m	Structural currency exposures pre economic hedges £m	Economic hedges £m	Remaining structural currency exposures £m
United States Dollar	14,577	6,019	–	8,558	6,720	1,838
Euro	6,336	2,922	–	3,414	3,125	289
Rand	3,725	–	1,306	2,419	164	2,255
Japanese Yen	5,009	801	4,212	(4)	–	(4)
Swiss Franc	3,042	2,936	101	5	–	5
Other	2,940	–	880	2,060	–	2,060
Total	35,629	12,678	6,499	16,452	10,009	6,443

At 31st December 2007

Functional currency of the operation involved

	Foreign currency net investments £m	Borrowings which hedge the net investments £m	Derivatives which hedge the net investments £m	Structural currency exposures pre economic hedges £m	Economic hedges £m	Remaining structural currency exposures £m
United States Dollar	3,273	1,000	–	2,273	3,575	(1,302)
Euro	3,690	1,506	–	2,184	2,387	(203)
Rand	3,205	–	2,599	606	165	441

Swiss Franc	2,140	–	2,131	9	–	9
Other	1,847	53	465	1,329	–	1,329
Total	17,141	2,739	7,968	6,434	6,127	307

Notes to the accounts

For the year ended 31st December 2008

48 Market risk (continued)

The economic hedges represent the US Dollar and Euro Preference Shares and Reserve Capital Instruments in issue that are treated as equity under IFRS, and do not qualify as hedges for accounting purposes.

The impact of a change in the exchange rate between Sterling and any of the major currencies would be:

- A higher or lower Sterling equivalent value of non-Sterling denominated capital resources and risk weighted assets. This includes a higher or lower currency translation reserve within equity, representing the retranslation of non-Sterling subsidiaries, branches and associated undertakings net of the impact of foreign exchange rate changes on derivatives and borrowings designated as hedges of net investments.
- A higher or lower profit after tax, arising from changes in the exchange rates used to translate items in the consolidated income statement.
- A higher or lower value of available for sale investments denominated in foreign currencies, impacting the available for sale reserve.

49 Liquidity risk

Liquidity risk is the risk that the Group is unable to meet its obligations when they fall due as a result of customer deposits being withdrawn, cash requirements from contractual commitments, or other cash outflows, such as debt maturities. Such outflows would deplete available cash resources for client lending, trading activities and investments. In extreme circumstances lack of liquidity could result in reductions in balance sheet and sales of assets, or potentially an inability to fulfil lending commitments. The risk that it will be unable to do so is inherent in all banking operations and can be affected by a range of institution-specific and market-wide events including, but not limited to, credit events, merger and acquisition activity, systemic shocks and natural disasters.

Liquidity risk management and measurement

Liquidity management within the Group has several components.

Intraday liquidity

The need to monitor, manage and control intraday liquidity in real time is recognised by the Group as a critical process: any failure to meet specific intraday commitments would have significant consequences, such as visible market disruption.

The Group policy is that each operation must ensure that it has access to sufficient intraday liquidity to meet any obligations it may have to clearing and settlement systems. Major currency payment flows and payment system collateral are monitored and managed in real time to ensure that at all times there is sufficient collateral to make payments. The Group actively engages in payment system development to help ensure that new payment systems are robust.

Day to day funding

Day to day funding is managed through limits on wholesale borrowings, secured borrowings and funding mismatches. These ensure that on any day and over any period there is a limited amount of refinancing required. These requirements include replacement of funds as liabilities mature or are borrowed by customers. The Retail and Commercial Bank together with Wealth maintain no reliance on wholesale funding. The Group maintains an active presence in global money markets through Barclays Capital, and monitors and manages the wholesale money market capacity for the Group's name to enable that to happen.

In addition to cash flow management, Treasury also monitors term mismatches between assets and liabilities, as well as the level and type of undrawn lending commitments, the usage of overdraft facilities and the impact of contingent liabilities such as standby letters of credit and guarantees.

Liquid assets

The Group maintains a portfolio of highly marketable assets including UK, US and Euro-area government bonds that can be sold or funded on a secured basis as protection against any unforeseen interruption to cash flow. The Group accesses secured funding markets in these assets on a regular basis. The Group does not rely on committed funding lines for protection against unforeseen interruptions to cash flow.

Diversification of liquidity sources

Sources of liquidity are regularly reviewed to maintain a wide diversification by currency, geography, provider, product and term. In addition, to avoid reliance on a particular group of customers or market sectors, the distribution of sources and the maturity profile of deposits are also carefully managed. Important factors in assuring liquidity are strength of relationships and the maintenance of depositors' confidence. Such confidence is based on a number of factors including the Group's reputation and relationship with those clients, the strength of earnings and the Group's financial position.

Structural liquidity

An important source of structural liquidity is provided by our core retail deposits in the UK, Europe and Africa, mainly current accounts and savings accounts. Although current accounts are repayable on demand and savings accounts at short notice, the Group's broad base of customers – numerically and by depositor type – helps to protect against unexpected fluctuations. Such accounts form a stable funding base for the Group's operations and liquidity needs.

The Group policy is to fund the balance sheet assets of the Retail and Commercial Bank together with Wealth and Head office functions on a global basis with customer deposits and capital without recourse to the wholesale markets. This provides protection from the liquidity risk of wholesale market funding. The exception to this policy is Absa, which has a large portion of wholesale funding due to the structural nature of the South African financial sector.

Scenario analysis and stress testing

Stress testing is undertaken to assess and plan for the impact of various scenarios which may put the Group's liquidity at risk.

Treasury develops and monitors a range of stress tests on the Group's projected cash flows. These stress scenarios include Barclays-specific scenarios such as an unexpected rating downgrade and operational problems, and external scenarios such as Emerging Market crises, payment system disruption and macro-economic shocks. The output informs both the liquidity mismatch limits and the Group's contingency funding plan. This is maintained by Treasury and is aligned with the Group and country business resumption plans to encompass decision-making authorities, internal and external communication and, in the event of a systems failure, the restoration of liquidity management and payment systems.

The ability to raise funds is in part dependent on maintaining the Bank's credit rating. The funding impact of a credit downgrade is closely tracked. Whilst the impact of a single downgrade may affect the price at which funding is available, the effect on liquidity is not considered material in Group terms.

49 Liquidity risk (continued)

Year-end assessment of liquidity

Barclays maintained a strong liquidity profile in 2008, sufficient to absorb the impact of a stressed funding environment. The Group has access to a substantial pool of liquidity both in secured markets and from unsecured depositors including numerous foreign governments and central banks. In addition, our limited reliance on securitisations as a source of funding has meant that the uncertainty in securitisation markets has not impacted our liquidity risk profile.

Whilst funding markets were extremely difficult in the latter half of 2008, and particularly since September 2008, Barclays was able to increase available liquidity, extend the term of unsecured liabilities, and reduce reliance on unsecured funding. Barclays has participated in various government and central bank liquidity facilities, both to aid central banks implementation of monetary policy and support central bank initiatives, where participation has enabled the lengthening of the term of our refinancing. These facilities have improved access to term funding, and helped moderate money market rates.

Global Retail and Commercial Banking

The sum of liabilities in Global Retail and Commercial Banking, Barclays Wealth and Head office functions exceeds assets in those businesses. As a result they have no reliance on wholesale funding. The balance sheet is modelled to reflect behavioural experience in both assets and liabilities, and is managed to maintain a positive cash profile.

Throughout 2008 Global Retail and Commercial Banking continued to grow the amount of customer deposits despite competitive pressures.

Barclays Capital

Barclays Capital manages liquidity to be self-funding through wholesale sources, managing access to liquidity to ensure that potential cash outflows in a stressed environment are covered.

Funding reliability is maintained by accessing a wide variety of investors and geographies and by building and maintaining strong relationships with these providers of liquidity. The depositors include asset managers, money market funds, corporates, government bodies, central banks and other financial institutions. Deposits are predominantly sourced from Western Europe and North America.

Unsecured Funding

Additionally, unsecured funding is managed within specific term limits. The term of unsecured liabilities has been extended, with average life increasing year over year.

Our capital markets debt issuance includes issues of senior and subordinated debt in US registered offerings and medium-term note programmes and European medium-term note programs. Substantially all of our unsecured senior issuance is without covenants that trigger increased cost or accelerate maturity.

Secured Funding

Barclays funds securities based on liquidity characteristics. Limits are in place for each security asset class reflecting liquidity in the cash and financing markets for these assets. The vast majority of assets funded in repurchase and stock loan transactions are fundable within central bank facilities (excluding Bank of England Emergency facilities and the Federal Reserve Primary Dealer Credit Facility). These are largely composed of G7 government securities, US mortgage agency debentures and mortgage backed securities, investment grade corporate securities and listed equities.

Liquidity risk to secured funding is also mitigated by:

- selecting reliable counterparties
- maintaining term financing and by limiting the amount of overnight funding
- limiting overall secured funding usage

Readily available liquidity

Substantial resources are maintained to offset maturing deposits and debt. These readily available assets are sufficient to absorb stress level losses of liquidity from unsecured as well as contingent cash outflows, such as collateral requirements on ratings downgrades. The sources of liquidity and contingent liquidity are from a wide variety of sources, including deposits held with central banks and unencumbered securities.

Notes to the accounts

For the year ended 31st December 2008

49 Liquidity risk (continued)

Contractual maturity of financial assets and liabilities

Details of contractual maturities for assets and liabilities form an important source of information for the management of liquidity risk. In order to more accurately reflect the expected behaviour of the Group's assets and liabilities measurement and modelling of each is constructed. This forms the foundation of the liquidity controls.

The table below provides detail on the contractual maturity of all financial instruments and other assets and liabilities. Derivatives (other than those designated in a hedging relationship) and trading portfolio assets and liabilities which are included in the on demand column at their fair value. Liquidity risk on these items is not managed on the basis of contractual maturity since they are not held for settlement according to such maturity and will frequently be settled before contractual maturity at fair value. Derivatives designated in a hedging relationship are included according to their contractual maturity.

Financial assets designated at fair value in respect of linked liabilities to customers under investment contracts have been included in Other assets and Other liabilities as the Group is not exposed to liquidity risk arising from them; any request for funds from creditors would be met by simultaneously liquidating or transferring the related investment

Notes to the accounts

For the year ended 31st December 2008

49 Liquidity risk (continued)

Contractual maturity of financial liabilities on an undiscounted basis

The table below presents the cash flows payable by the Group under financial liabilities by remaining contractual maturities at the balance sheet date. The amounts disclosed in the table are the contractual undiscounted cash flows of all financial liabilities (i.e nominal values), whereas the Group manages the inherent liquidity risk based on discounted expected cash inflows. Derivative financial instruments held for trading and trading portfolio liabilities are included in the on demand column at their fair value.

Financial liabilities designated at fair value in respect of linked liabilities under investment contracts have been excluded from this analysis as the Group is not exposed to liquidity risk arising from them. Any request for funds from investors would be met simultaneously from the linked assets.

The balances in the above table will not agree directly to the balances in the consolidated balance sheet as the table incorporates all cash flows, on an undiscounted basis, related to both principal as well as those associated with all future coupon payments.

The principal due under perpetual subordinated liability instruments has been included in the over five years category. Further interest payments have not been included on this amount, which according to their strict contractual terms, could carry on indefinitely.

50 Fair value of financial instruments

The fair value of a financial instrument is the amount for which an asset could be exchanged, or a liability settled, in an arm's length transaction between knowledgeable willing parties.

Comparison of carrying amounts and fair values

The following table summarises the carrying amounts of financial assets and liabilities presented on the Group's balance sheet, and their fair values differentiating between financial assets and liabilities subsequently measured at fair value and those subsequently measured at amortised cost:

– Liabilities to customers under investment contracts	b	69,183	69,183	92,639	92,639
Derivative financial instruments	b	968,072	968,072	248,288	248,288
Debt securities in issue	d	149,567	148,736	120,228	120,176
Repurchase agreements and cash collateral on securities lent	d	182,285	182,285	169,429	169,429
Subordinated liabilities	d	29,842	22,944	18,150	17,410

Notes to the accounts

For the year ended 31st December 2008

50 Fair value of financial instruments (continued)

Notes

- a Fair value approximates carrying value due to the short-term nature of these financial assets and liabilities.
- b The carrying value of financial instruments subsequently measured at fair value (including those held for trading, designated at fair value, derivatives and available for sale) is determined in accordance with accounting policy 7 on page 194 and further description and analysis of these fair values are set out below.
- c The carrying value of financial assets subsequently measured at amortised cost (including loans and advances, and other lending such as reverse repurchase agreements and cash collateral on securities borrowed) is determined in accordance with the accounting policy 7 on page 194. In many cases the fair value disclosed approximates the carrying value because the instruments are short term in nature or have interest rates that reprice frequently. In other cases, fair value is determined using discounted cash flows, applying either market derived interest rates or, where the counterparty is a bank, rates currently offered by other financial institutions for placings with similar characteristics. Additionally, fair value can be determined by applying an average of available regional and industry segmental credit spreads to the loan portfolio, taking the contractual maturity of the loan facilities into consideration.
- d The carrying value of financial liabilities subsequently measured at amortised cost (including customer accounts and other deposits such as repurchase agreements and cash collateral on securities lent, debt securities in issue, subordinated liabilities) is determined in accordance with the accounting policy 7 on page 194. In many cases, the fair value disclosed approximates the carrying value because the instruments are short term in nature or have interest rates that reprice frequently such as customer accounts and other deposits and short term debt securities. Fair values of other debt securities in issue are based on quoted prices where available, or where these are unavailable, are estimated using a valuation model. Fair values for dated and undated convertible and non-convertible loan capital are based on quoted market rates for the issue concerned or similar issues with similar terms and conditions.

Valuation methodology

The table below shows the Group's financial assets and liabilities that are recognised and measured at fair value analysed by valuation technique. A description of the nature of the techniques used to calculate valuations based on observable inputs and valuations based on unobservable inputs is set out on the next page.

	At 31st December 2008				
	Valuations based on observable inputs £m	Valuations based on unobservable inputs			Total £m
		Vanilla products £m	Exotic products £m	Total £m	
Trading portfolio assets	174,168	11,469	–	11,469	185,637
Financial assets designated at fair value:					
– held on own account	37,618	16,559	365	16,924	54,542
– held in respect of linked liabilities to customers under investment contracts	66,657	–	–	–	66,657
Derivative financial assets	970,028	12,436	2,338	14,774	984,802
Available for sale assets	63,149	1,827	–	1,827	64,976
Total assets	1,311,620	42,291	2,703	44,994	1,356,614
Trading portfolio liabilities	(59,436)	(38)	–	(38)	(59,474)
Financial liabilities designated at fair value	(71,044)	(290)	(5,558)	(5,848)	(76,892)
Liabilities to customers under investment contracts	(69,183)	–	–	–	(69,183)
Derivative financial liabilities	(959,518)	(6,151)	(2,403)	(8,554)	(968,072)
Total liabilities	(1,159,181)	(6,479)	(7,961)	(14,440)	(1,173,621)

	At 31st December 2007				
	Valuations based on observable inputs £m	Valuations based on unobservable inputs			Total £m
		Vanilla products £m	Exotic products £m	Total £m	
Trading portfolio assets	189,234	4,457	–	4,457	193,691
Financial assets designated at fair value:					
– held on own account	39,810	16,819	–	16,819	56,629
– held in respect of linked liabilities to customers under investment contracts	90,851	–	–	–	90,851
Derivative financial assets	245,381	1,118	1,589	2,707	248,088
Available for sale assets	42,262	810	–	810	43,072
Total assets	607,538	23,204	1,589	24,793	632,331
Trading portfolio liabilities	(65,360)	(42)	–	(42)	(65,402)
Financial liabilities designated at fair value	(68,317)	(951)	(5,221)	(6,172)	(74,489)
Liabilities to customers under investment contracts	(92,639)	–	–	–	(92,639)
Derivative financial liabilities	(243,906)	(1,178)	(3,204)	(4,382)	(248,288)
Total liabilities	(470,222)	(2,171)	(8,425)	(10,596)	(480,818)

Of the total Group assets of £1,356,614m measured at fair value, £44,994m (2007: £24,793m) were valued using models with unobservable inputs. While the derivative assets associated with our Monoline exposure accounted for a significant portion of the increase in assets valued using unobservable inputs, further increases arose due to weakness in Sterling, as well as increased illiquidity in the market.

50 Fair value of financial instruments (continued)

The nature of the valuation techniques set out in the table above are summarised as follows:

Valuations based on observable inputs

Valuations based on observable inputs include

- Financial instruments for which their valuations are determined by reference to unadjusted quoted prices in active markets where the quoted price is readily available and the price represents actual and regularly occurring market transactions on an arm's length basis;
- Financial instruments valued using recent arm's length market transactions or with reference to the current fair value of similar instruments;
- Linear financial instruments such as swaps and forwards which are valued using market standard pricing techniques;
- Options that are commonly traded in markets whereby all the inputs to the market-standard pricing models are deemed observable.

Valuations based on unobservable inputs

Valuations based on unobservable inputs include:

(a) Vanilla products

Products valued using simple models, such as discounted cash flow or Black Scholes models, where some of the inputs are not observable. This would include, for example, commercial loans, commercial mortgage backed securities, selected mortgage products, Alt As and subprime loans, as well as long-dated vanilla options with tenors different to those commonly traded in the markets and hence unobservable volatilities.

(b) Exotic products

Exotic products are over-the-counter products that are relatively bespoke, not commonly traded in the markets, and are valued using sophisticated mathematical models where some of the inputs are not observable.

In determining the value of vanilla and exotic products the following are the principal inputs that can require judgement:

(i) Volatility

Volatility is a critical input to all option pricing models, across all asset classes. In most cases volatility is observable from the vanilla options that are traded across the various asset classes but, on occasion, volatility is unobservable, for example, for long maturity option.

(ii) Correlation

Across asset classes, correlation is another important input to some pricing models, for example for products whose value depends on two equity indices. In some developed markets there are products traded from which correlation can be implied, for example spread products in commodities.

(iii) Model input parameters

Some exotic models have input parameters that define the models, for example interest rate models tend to have parameters that are needed to capture the rich dynamics of the yield curve. These model parameters are typically not directly observable but may be inferred from observable inputs.

(iv) Spreads to discount rates

For certain product types, particularly credit related such as asset backed financial instruments, the discount rate is set at a spread to the standard discount (LIBOR) rates. In these cases, in addition to standard discount rates, the spread is a significant input to the valuation. For some assets this spread data can be unobservable.

(v) Default rates and recovery rates

In certain credit products valued using pricing models, default rates and recovery rates may be necessary inputs. Some default rates and recovery rates are deemed observable but for others which are less frequently traded in the markets they may not be.

(vi) Prepayment rates

For products in the securitisation businesses, for example mortgage backed securities, prepayment rates are key inputs. Some of the drivers of prepayment are understood (such as the nature of assets/loans, e.g. quality of mortgage pool and macroeconomic factors) however, future prepayment rates are considered unobservable.

The following summary sets out the principal instruments whose valuation may involve judgmental inputs.

Corporate bonds

Corporate bonds are generally valued using observable quoted prices or recently executed transactions. Where observable price quotations are not available, the fair value is determined based on cash flow models where significant inputs may include yield curves, bond or single name credit default swap spreads.

Mortgage whole loans

Wherever possible, the fair value of mortgage whole loans is determined using observable quoted prices or recently executed transactions for comparable assets. Where observable price quotations or benchmark proxies are not available, fair value is determined using cash flow models where significant inputs include yield curves, collateral specific loss assumptions, asset specific prepayment assumptions, yield spreads and expected default rates.

Commercial mortgage backed securities and asset backed securities

Commercial mortgage backed securities and asset backed securities (ABS) (residential mortgages, credit cards, auto loans, student loans and leases) are valued using observable information to the greatest extent possible. Wherever possible, the fair value is determined using quoted prices or recently executed transactions. Where observable price quotations are not available, fair value is determined based on cash flow models where the significant inputs may include yield curves, credit spreads and prepayment rates. Securities that are backed by the residual cash flows of an asset portfolio are generally valued using similar cash flow models. The fair value of home equity loan bonds are determined using models which use scenario analysis with significant inputs including age, rating, internal grade, and index prices.

Notes to the accounts

For the year ended 31st December 2008

50 Fair value of financial instruments (continued)

Collateralised debt obligations

The valuation of collateralised debt obligations (CDOs) notes is first based on an assessment of the probability of an event of default occurring due to a credit deterioration. This is determined by reference to the probability of event of default occurring and the probability of exercise of contractual rights related to event of default. The notes are then valued by determining appropriate valuation multiples to be applied to the contractual cash flows. These are based on inputs including the prospective cash flow performance of the underlying securities, the structural features of the transaction and the net asset value of the underlying portfolio.

Private equity

The fair value of private equity is determined using appropriate valuation methodologies which, dependent on the nature of the investment, may include discounted cash flow analysis, enterprise value comparisons with similar companies, price:earnings comparisons and turnover multiples. For each investment the relevant methodology is applied consistently over time.

OTC Derivatives

Derivative contracts can be exchange traded or over the counter (OTC). OTC derivative contracts include forward, swap and option contracts related to interest rates, bonds, foreign currencies, credit standing of reference entities, equity prices, fund levels, commodity prices or indices on these assets.

The fair value of OTC derivative contracts are modelled using a series of techniques, including closed form analytical formulae (such as the Black-Scholes option pricing model) and simulation based models. The choice of model is dependant on factors such as; the complexity of the product, inherent risks and hedging strategy: statistical behaviour of the underlying, and ability of the model to price consistently with observed market transactions. For many pricing models there is no material subjectivity because the methodologies employed do not necessitate significant judgement and the pricing inputs are observed from actively quoted markets, as is the case for generic interest rate swaps and option markets. In the case of more established derivative products, the pricing models used are widely accepted and used by the other market participants. Significant inputs used in these models may include yield curves, credit spreads, default rates, recovery rates, dividend rates, volatility of underlying interest rates, equity prices or foreign exchange rates and, in some cases, correlation between these inputs. These inputs are determined with reference to quoted prices, recently executed trades, independent market quotes and consensus data.

New, long dated or complex derivative products may require a greater degree of judgement in the implementation of appropriate valuation techniques, due to the complexity of the valuation assumptions and the reduced observability of inputs. The valuation of more complex products may use more generic derivatives as a component to calculating the overall value.

Derivatives where valuation involves a significant degree of judgement include:

Fund derivatives

Fund derivatives are derivatives whose underlyings include mutual funds, hedge funds, indices and multi-asset portfolios. They are valued using underlying fund prices, yield curves and available market information on the level of the hedging risk. Some fund derivatives are valued using unobservable information, generally where the level of the hedging risk is not observable in the market. These are valued taking account of risk of the underlying fund or collection of funds, diversification of the fund by asset, concentration by geographic sector, strategy of the fund, size of the transaction and concentration of specific fund managers.

Commodity derivatives

Commodity derivatives are valued using models where the significant inputs may include interest rate yield curves, commodity price curves, volatility of the underlying commodities and, in some cases, correlation between these inputs, which are generally observable. This approach is applied to base metal, precious metal, energy, power, gas, emissions, soft commodities and freight positions. Due to the significant time span in the various market closes, curves are constructed using differentials to a benchmark curve to ensure that all curves are valued using the dominant market base price.

Structured credit derivatives

Collateralised synthetic obligations (CSOs) are structured credit derivatives which reference the loss profile of a portfolio of loans, debts or synthetic underlyings. The reference asset can be a corporate credit or an asset backed credit. For CSOs that reference corporate credits an analytical model is used. For CSOs on asset backed underlyings, due to the path dependent nature of a CSO on an amortising portfolio a Monte Carlo simulation is used rather than analytic approximation. The expected loss probability for each reference credit in the portfolio is derived from the single name credit default swap spread curve and in addition, for ABS references, a prepayment rate assumption. A simulation is then used to compute survival time which allows us to calculate the marginal loss over each payment period by reference to estimated recovery rates. Significant inputs include prepayment rates, cumulative default rates, and recovery rates.

Sensitivity analysis of valuations using unobservable inputs

As part of our risk management processes, stress tests are applied on the significant unobservable parameters to generate a range of potentially possible alternative valuations. The financial instruments that most impact this sensitivity analysis are those with the more illiquid and/or structured portfolios. The stresses are applied independently and do not take account of any cross correlation between separate asset classes that would reduce the overall effect on the valuations.

At 31st December 2008

	Significant unobservable parameters ^a	Potential effect recorded in profit or loss		Potential effect recorded in equity	
		Favourable (£m)	(Unfavourable) (£m)	Favourable (£m)	(Unfavourable) (£m)
Asset backed securities and loans and derivatives with asset backed underlyings	iii, iv, v, vi	1,470	(1,896)	46	(54)
Private equity ^b	iii, iv	209	(208)	64	(142)
Derivative assets and liabilities and financial liabilities designated at fair value:					
– Derivative exposure to Monoline insurers	iii, iv, v, vi	21	(329)	–	–
– Funds derivatives and structured notes	iii	226	(123)	–	–
– Other structured derivatives and notes	i, ii, iii	304	(196)	–	–
Other	i, ii, iii, iv, v, vi	55	(43)	–	–
Total		2,285	(2,795)	110	(196)

Notes

^a (i)-(vi) refer to valuation inputs listed on page 289.

^b Available for sale assets (Private Equity) and assets designated at fair value (Principal Investments).

50 Fair value of financial instruments (continued)

At 31st December 2007

	Significant unobservable parameters ^a	Potential effect recorded in profit or loss		Potential effect recorded in equity	
		Favourable (£m)	(Unfavourable) (£m)	Favourable (£m)	(Unfavourable) (£m)
Asset backed securities and loans and derivatives with asset backed underlyings	iii, iv, v, vi	868	(868)	5	(5)
Private equity	iii, iv	75	(75)	36	(36)
Derivative assets and liabilities and financial liabilities designated at fair value:					
– Fund derivatives and structured notes	iii	441	(147)	–	–
– Other structured derivatives and notes	i, ii, iii	57	(56)	–	–
Other	i, ii, iii, iv, v, vi	3	(1)	–	–
Total		1,444	(1,147)	41	(41)

The effect of stressing the significant unobservable assumptions to a range of reasonably possible alternatives would be to increase the fair values by up to £2.4bn (2007: £1.5bn) or to decrease the fair values by up to £3.0bn (2007: £1.2bn) with substantially all the potential effect being recorded in profit or loss rather than equity.

Asset backed securities and loans, and derivatives with asset backed underlyings

Asset backed securities, loans and related derivatives contribute most to the sensitivity analysis as at 31st December 2008. The stress effect increased in this area in 2008 due to continued market dislocation and increased levels of unobservability. The stresses having the most significant impact on the analysis are: for commercial mortgage backed securities and loans, changing the spreads to discount rates to close to originated levels (favourable stress) and increasing spreads to between 2 and 6% (unfavourable stress); for residential mortgage backed securities and loans, changing the spreads to discount rates by +/-10%; and for collateralised debt obligations that reference asset backed securities and loans, primarily by changing the spreads to discount rates by +/-20%.

Private equity

The sensitivity amounts are calculated by stressing the key valuation inputs to each individual valuation – generally either price:earnings ratios or EBITDA analysis. The stresses are then determined by comparing these metrics with a range of similar companies.

Derivative exposure to Monoline insurers

The favourable stress is calculated by reference to counterparty quotes for second loss protection on the appropriate reference obligations. The unfavourable stress is calculated by applying a default scenario to the monolines that are rated BBB or below.

Fund derivatives and structured notes

The valuation of these transactions takes into account the risk that the underlying fund-linked asset value will decrease too quickly to be able to re-hedge with risk-free instruments ('gap risk'). The sensitivity amounts are determined by applying stresses to market quotes for hedging the relevant gap risk. The unfavourable stress is based on a shift in the gap risk price of 34bp, the favourable stress applies to a pricing level that assumes no gap event will occur.

Other structured derivatives and notes

The sensitivity amounts are calculated principally by adjusting the relevant correlation sensitivity used in the valuation model by a range based on structured derivative data available in consensus pricing services. The range applied to correlation sensitivity is an adverse or beneficial move of 15bp applied to the correlation sensitivity.

Unrecognised gains as a result of the use of valuation models using unobservable inputs

The amount that has yet to be recognised in income that relates to the difference between the transaction price (the fair value at initial recognition) and the amount that would have arisen had valuation models using unobservable inputs been used on initial recognition, less amounts subsequently recognised, was as follows:

At 31st December

	2008 £m	2007 £m
At 1st January	154	534
New transactions	77	134
Amounts recognised in profit or loss during the year	(103)	(514)
At 31st December	128	154

The net asset fair value position of the related financial instruments increased by £16,357m for the year ended 31st December 2008 (31st December 2007: £2,842m). In many cases these changes in fair values were offset by changes in fair values of other financial instruments, which were priced in active markets or valued by using a valuation technique which is supported by observable market prices or rates, or by transactions which have been realised.

Notes

a (i)-(vi) refer to valuation inputs listed on page 289.

Notes to the accounts

For the year ended 31st December 2008

51 Reclassification of financial assets held for trading

On 16th December the Group reclassified certain financial assets originally classified as held for trading that were no longer held for the purpose of selling or repurchasing in the near term out of fair value through profit or loss to loans and receivables. In making this reclassification, the Group identified those trading assets, comprising portfolios of bank-issued fixed rate notes and mortgage and other asset backed securities, for which it had a clear change of intent to hold for the foreseeable future or until maturity rather than to trade in the short term. At the time of the transfer, the Group identified rare circumstances permitting such reclassification, being severe illiquidity in the relevant market.

The following table shows carrying values and fair values of the assets reclassified at 16th December 2008.

	16th December 2008		31st December 2008	
	Carrying value £m	Carrying value £m	Carrying value £m	Fair value £m
Trading assets reclassified to loans and receivables	4,046	3,986	3,984	3,984
Total financial assets reclassified to loans and receivables	4,046	3,986	3,986	3,984

As at the date of reclassification, the effective interest rates on reclassified trading assets ranged from 0.18% to 9.29% with expected recoverable cash flows of £7.4bn.

If the reclassifications had not been made, the Group's income statement for 2008 would have included unrealised fair value losses on the reclassified trading assets of £1.5m.

After reclassification, the reclassified financial assets contributed the following amounts to the 2008 income before income taxes.

	2008 £m
Net interest income	4
Provision for credit losses	–
Income before income taxes on reclassified trading assets	4

Prior to reclassification in 2008, £144m of unrealised fair value losses on the reclassified trading assets was recognised in the consolidated income statement for 2008 (2007: £218m loss).

52 Capital Management

Barclays operates a centralised capital management model, considering both regulatory and economic capital. The capital management strategy is to continue to maximise shareholder value through optimising both the level and mix of capital resources. Decisions on the allocation of capital resources are conducted as part of the strategic planning review.

The Group's capital management objectives are to:

- Maintain sufficient capital resources to meet the minimum regulatory capital requirements set by the FSA and the US Federal Reserve Bank's requirements that a financial holding company be well capitalised.
- Maintain sufficient capital resources to support the Group's risk appetite and economic capital requirements.
- Support the Group's credit rating.
- Ensure locally regulated subsidiaries can meet their minimum capital requirements.
- Allocate capital to businesses to support the Group's strategic objectives, including optimising returns on economic and regulatory capital.

External Regulatory Capital Requirements

The Group is subject to minimum capital requirements imposed by the Financial Services Authority (FSA), following guidelines developed by the Basel Committee on Banking Supervision (the Basel Committee) and implemented in the UK via European Union Directives.

Under Basel II, effective from 1st January 2008, the Group has approval by the FSA to use the advanced approaches to credit and operational risk management. Pillar 1 capital requirements are generated using the Group's risk models.

Under Pillar 2 of Basel II, the Group is subject to an overall regulatory capital requirement based on individual capital guidance ('ICG') received from the FSA. The ICG imposes additional capital requirements in excess of Pillar 1 minimum capital requirements.

Outside the UK, the Group has operations (and main regulators) located in continental Europe, in particular France, Germany, Spain, Portugal and Italy (local central banks and other regulatory authorities); Asia Pacific (various regulatory authorities including the Hong Kong Monetary Authority, the Japanese FSA and the Monetary Authority of Singapore); Africa, where the Group's operations are headquartered in Johannesburg, South Africa (The South African Reserve Bank and the Financial Services Board (FSB)) and the United States of America (the Board of Governors of the Federal Reserve System (FRB) and the Securities and Exchange Commission).

The Group manages its capital resources to ensure that those Group entities that are subject to local capital adequacy regulation in individual countries meet their minimum capital requirements. Local management manages compliance with subsidiary entity minimum regulatory capital requirements with reporting to local Asset and Liability Committees and to Treasury Committee, as required.

52 Capital Management (continued)

Regulatory Capital

The table below provides details of the regulatory capital resources managed by the Group.

	Basel II 2008 £m	Basel I 2007 £m
Total qualifying Tier 1 capital	37,250	27,408
Total qualifying Tier 2 capital	22,333	17,123
Total deductions	(856)	(1,889)
Total net capital resources	58,727	42,642

Insurance businesses

Insurance businesses are subject to separate regulation regarding Capital management and have constraints on the transfer of capital. Capital resource requirements are assessed at company level in accordance with local laws and regulations. However, the requirement is that each life fund should be able to meet its own liabilities. In the event that this should not be the case, shareholders' equity would be required to meet its liabilities to the extent that they could not otherwise be met.

The capital resource requirement of the insurance businesses at 31st December 2008 was £192m (31st December 2007: £216m).

53 Segmental reporting

The following section analyses the Group's performance by business. For management and reporting purposes, Barclays is organised into the following business groupings:

Global Retail and Commercial Banking

- UK Retail Banking
- Barclays Commercial Bank
- Barclaycard
- GRCB – Western Europe
- GRCB – Emerging Markets
- GRCB – Absa

Investment Banking and Investment Management

- Barclays Capital
- Barclays Global Investors
- Barclays Wealth

Head Office Functions and Other Operations

UK Retail Banking

UK Retail Banking comprises Personal Customers, Home Finance, Local Business, Consumer Lending and Barclays Financial Planning. This cluster of businesses aims to build broader and deeper relationships with its Personal and Local Business customers through providing a wide range of products and financial services. Personal Customers and Home Finance provide access to current account and savings products, Woolwich branded mortgages and general insurance. Consumer Lending provides unsecured loan and protection products and Barclays Financial Planning provides investment advice and products. Local Business provides banking services, including money transmission, to small businesses.

Barclays Commercial Bank

Barclays Commercial Bank provides banking services to organisations with an annual turnover of more than £1m. Customers are served via a network of relationship and industry sector specialists, which provides solutions constructed from a comprehensive suite of banking products, support, expertise and services, including specialist asset financing and leasing facilities. Customers are also offered access to the products and expertise of other businesses in the Group, particularly Barclays Capital, Barclaycard and Barclays Wealth.

Barclaycard

Barclaycard is a multi-brand credit card and consumer lending business which also processes card payments for retailers and merchants and issues credit and charge cards to corporate customers and the UK Government. It is one of Europe's leading credit card businesses and has an increasing presence in the United States and South Africa.

In the UK, Barclaycard comprises Barclaycard UK Cards, Barclaycard Partnerships, Barclays Partner Finance and FirstPlus.

Outside the UK, Barclaycard provides credit cards in the United States, Germany, South Africa (through management of the Absa credit card portfolio) and in the Scandinavian region, where Barclaycard operates through Entercard, a joint venture with Swedbank.

Barclaycard works closely with other parts of the Group, including UK Retail Banking, Barclays Commercial Bank and GRCB – Western Europe and GRCB – Emerging Markets, to leverage their distribution capabilities.

Global Retail and Commercial Banking – Western Europe

GRCB – Western Europe encompasses Barclays Global Retail and Commercial Banking as well as Barclaycard operations in Spain, Italy, Portugal and France. GRCB – Western Europe serves customers through a variety of distribution channels. GRCB – Western Europe provides a variety of products including retail mortgages, current and deposit accounts, commercial lending, unsecured lending, credit cards, investments, and insurance serving the needs of Barclays retail, mass affluent, and corporate customers.

Notes to the accounts

For the year ended 31st December 2008

53 Segmental reporting (continued)

Global Retail and Commercial Banking – Emerging Markets

GRCB – Emerging Markets encompasses Barclays Global Retail and Commercial Banking, as well as Barclaycard operations, in 14 countries organised in six geographic areas: India and Indian Ocean (India, Mauritius and Seychelles); Middle East and North Africa (UAE and Egypt); East and West Africa (Ghana, Tanzania, Uganda and Kenya); Southern Africa (Botswana, Zambia and Zimbabwe); Russia; and Pakistan (from 23rd July 2008). GRCB – Emerging Markets serves its customers through a variety of distribution channels. GRCB – Emerging Markets provides a variety of traditional retail and commercial products including retail mortgages, current and deposit accounts, commercial lending, unsecured lending, credit cards, treasury and investments. In addition to this, it provides specialist services such as Sharia compliant products and mobile banking.

Global Retail and Commercial Banking – Absa

GRCB – Absa represents Barclays consolidation of Absa, excluding Absa Capital and Absa Card which is included as part of Barclays Capital and Barclaycard respectively. Absa Group Limited is a South African financial services organisation serving personal, commercial and corporate customers predominantly in South Africa. GRCB – Absa serves retail customers through a variety of distribution channels and offers a full range of banking services, including current and deposit accounts, mortgages, instalment finance, credit cards, bancassurance products and wealth management services. It also offers customised business solutions for commercial and large corporate customers.

Barclays Capital

Barclays Capital is the investment banking division of Barclays that provides large corporate, institutional and government clients with solutions to their financing and risk management needs.

Barclays Capital services a wide variety of client needs, covering strategic advisory and M&A; equity and fixed income capital raising and corporate lending; and risk management across foreign exchange, interest rates, equities and commodities.

Activities are organised into three principal areas: Global Markets, which includes commodities, credit products, equities, foreign exchange, interest rate products; Investment Banking, which includes corporate advisory, Mergers and Acquisitions, equity and fixed-income capital raising and corporate lending; and Private Equity and Principal Investments. Barclays Capital includes Absa Capital, the investment banking business of Absa. Barclays Capital works closely with all other parts of the Group to leverage synergies from client relationships and product capabilities.

Barclays Global Investors

BGI is an asset manager and a provider of investment management products and services.

BGI offers structured investment strategies such as indexing, global asset allocation and risk controlled active products including hedge funds and provides related investment services such as securities lending, cash management and portfolio transition services. BGI collaborates with the other Barclays businesses, particularly Barclays Capital and Barclays Wealth, to develop and market products and leverage capabilities to better serve the client base.

Barclays Wealth

Barclays Wealth serves high net worth, affluent and intermediary clients worldwide, providing private banking, asset management, stockbroking, offshore banking, wealth structuring and financial planning services and managed the closed life assurance activities of Barclays and Woolwich in the UK.

Barclays Wealth works closely with all other parts of the Group to leverage synergies from client relationships and product capabilities.

Head Office Functions and Other Operations

Head Office Functions and Other Operations comprises head office and central support functions, businesses in transition and inter-segment adjustments.

Head office and central support functions comprises the following areas: Executive Management, Finance, Treasury, Corporate Affairs, Human Resources, Strategy and Planning, Internal Audit, Legal, Corporate Secretariat, Property, Tax, Compliance and Risk. Costs incurred wholly on behalf of the businesses are recharged to them.

Businesses in transition principally relate to certain lending portfolios that are centrally managed with the objective of maximising recovery from the assets.

Other income	377	188	214
Total income net of insurance claims	23,115	23,000	21,595

Interest income

Cash and balances with central banks interest income consists of interest income from cash on deposit with central banks. Available for sale investments interest income consists of the interest yield on debt securities, treasury bills and other eligible bills. Loans and advances to banks interest income consists of interest income from loans and advances to other banks. Loans and advances to customers interest income consists of interest income from loans, mortgages, advances and credit cards to customers. Other interest income principally consists of interest income relating to reverse repurchase agreements.

Interest expense

Deposits from banks interest expense consists of interest expense paid to other banks on their deposits with Barclays. Customer accounts interest expense consists of interest expense paid to customers on their current and savings account with Barclays. Debt securities in issue interest expense consists of interest expense paid to customers who hold Barclays debt securities in issue. Subordinated liabilities interest expense consists of interest expense paid to customers who hold Barclays subordinated liabilities. Other interest expense principally consists of interest expense relating to repurchase agreements and hedging activity.

Fee and commission income

Brokerage fees income consists of fees charged to facilitate transactions between buyers and sellers. The brokerage fee is charged for services such as negotiations, sales, purchases, delivery or advice on the transaction. Investment management fees are levied on assets under management. Securities lending fees are charged when stock is lent to third parties. Banking and credit related fees and commissions consist of fees and commissions charged on banking and credit card transactions. Foreign exchange commissions are earned on foreign exchange transactions with customers.

Fee and commission expense

Fee and commission expense consists of fees paid to third parties to facilitate transactions between buyers and sellers. The fee is charged for services such as negotiations, sales, purchases, delivery or advice on the transaction.

Notes to the accounts

For the year ended 31st December 2008

53 Segmental reporting (continued)

Principal transactions

Rates and Credit related business consists of profits and losses arising both on the purchase and sale of trading instruments and from the revaluation to market value together with the interest income and expense from these instruments and the related funding costs. Net investment income consists of the net gain from disposal of available for sale assets, dividend income, net gain from financial instruments designated at fair value and other investment income.

Total income net of insurance claims

Net premiums from insurance contracts consists of gross premiums from insurance contracts and premiums ceded to reinsurers. Net claims and benefits incurred on insurance contracts consists of gross claims and benefits incurred on insurance contracts and reinsurers' share of claims incurred. Other income consists of increase in fair value of assets held under linked liabilities to customers under investment contracts, increase in liabilities to customers under investment contracts, property rentals and other income.

Geographical information

(i) A geographical analysis of revenues from external customers is presented below:

	2008 £m	2007 £m	2006 £m
Attributed to the UK	12,277	13,127	12,154
Attributed to other regions			
Other European Union	3,633	3,374	2,882

Other investment income	239	337	193
Net investment income	680	1,216	962
Principal transactions	1,940	4,975	4,594

Net trading income includes the profits and losses arising both on the purchase and sale of trading instruments and from the revaluation to fair value, together with the interest income earned from these instruments and the related funding cost.

Of the total net trading income, a £2,096m net loss (2007: £116m loss, 2006: £1,427m gain) was made on the purchase and sale of securities and the revaluation of both securities and derivatives. This included a £1,272m gain (2007: £640m gain, 2006: £480m gain) that was earned in foreign exchange dealings.

The net loss on financial assets designated at fair value included within principal transactions was £6,602m (2007: £78m gain, 2006: £489m gain) of which losses of £6,635m (2007: £215m loss, 2006: £42m gain) were included in net trading income and gains of £33m (2007: £293m, 2006: £447m) were included in net investment income.

c Principal transactions (continued)

The net gain on financial liabilities designated at fair value included within principal transactions was £3,328m (2007: £231m loss, 2006: £920m loss), all of which was included within net trading income.

Net trading income includes the net gain from widening of credit spreads relating to Barclays Capital issued notes held at fair value was £1,663m (2007: £658m, 2006: £nil).

d Administration and general expenses

	2008 £m	2007 £m	2006 £m

The figures shown in the above table relate to fees paid to PricewaterhouseCoopers LLP and its associates. Fees paid to other auditors not associated with PricewaterhouseCoopers LLP in respect of the audit of the Bank's subsidiaries were £3m (2007: £2m, 2006: £2m).

d Administration and general expenses (continued)

Fees payable for the audit of the Bank's associates pursuant to legislation comprise the fees for the statutory audit of the subsidiaries and associated pension schemes both inside and outside Great Britain and fees for the work performed by the associates of PricewaterhouseCoopers LLP in respect of the consolidated financial statements of the Bank. The fees relating to the audit of the associated pension schemes were £0.2m (2007: £0.3m, 2006: £0.3m).

Other services supplied pursuant to such legislation comprise services in relation to statutory and regulatory filings. These includes audit services for the review of the interim financial information under the Listing Rules of the UK listing authority and fees paid for reporting under Section 404 of the US Sarbanes-Oxley Act (Section 404). In 2008 fees paid for reporting under Section 404 are not separately identifiable from the fees of the audit of the Bank's annual accounts and the Bank's associates. Fees for the audit of Barclays Bank PLC Group accounts are not separately identifiable from Barclays PLC, therefore there is no difference in the amounts reported in both Annual Reports. In addition, other services include Section 404 advisory, reporting accountant work for capital raising, securitisations and services relating to acquisition activities.

Taxation services include compliance services such as tax return preparation and advisory services such as consultation on tax matters, tax advice relating to transactions and other tax planning and advice.

Services relating to corporate finance transactions comprise due diligence related to transactions and other work in connection with such transactions.

e Tax

The charge for tax is based upon the UK corporation tax rate of 28.5% (2007: 30%, 2006: 30%) and comprises:

	2008 £m	2007 £m	2006 £m
Current tax charge/(credit)			
Current year	1,559	2,385	1,929
Adjustment for prior years	97	(11)	8
	1,656	2,374	1,937
Deferred tax (credit)/charge			
Current year	(597)	(367)	(16)
Adjustment for prior years	(273)	(26)	20
	(870)	(393)	4
Total charge	786	1,981	1,941

The effective tax rate for the years 2008, 2007 and 2006 is lower than the standard rate of corporation tax in the UK of 28.5% (2007: 30%, 2006: 30%). The differences are set out below:

	2008 £m	2007 £m	2006 £m
Profit before tax	6,035	7,107	7,197
Tax charge at standard UK corporation tax rate of 28.5% (2007: 30%, 2006: 30%)	1,720	2,132	2,159
Adjustment for prior years	(176)	(37)	24
Differing overseas tax rates	215	(77)	(17)
Non-taxable gains and income (including amounts offset by unrecognised tax losses)	(833)	(136)	(393)
Share-based payments	229	72	27
Deferred tax assets not previously recognised	(514)	(158)	(4)
Change in tax rates	(1)	24	4
Other non-allowable expenses	146	161	141
Overall tax charge	786	1,981	1,941
Effective tax rate	13%	28%	27%

The effective rate of tax for 2008, based on profit before tax, was 13% (2007: 28%). The effective tax rate differs from the 2007 effective rate and the UK corporation tax rate of 28.5% principally due to the Lehman Brothers North American businesses acquisition. Under IFRS the gain on acquisition of £2,262m is calculated net of deferred tax liabilities included in the acquisition balance sheet and is thus not subject to further tax in calculating the tax charge for the year. Furthermore, Barclays has tax losses previously unrecognised as a deferred tax asset but capable of sheltering part of this deferred tax liability. This gives rise to a tax benefit of £492m which, in accordance with IAS 12, is included as a credit within the tax charge for the year. The effective rate has been adversely impacted by the effect of the fall in the Barclays share price on the deferred tax asset recognised on share awards. In common with prior years there have been offsetting adjustments relating to different overseas tax rates, disallowable expenditure and non taxable gains and income.

f Other income

	2008 £m	2007 £m	2006 £m
(Decrease)/increase in fair value of assets held in respect of linked liabilities to customers under investment contracts	(10,422)	5,592	7,417
Decrease/(increase) in liabilities to customers under investment contracts	10,422	(5,592)	(7,417)
Property rentals	73	53	55
Other income	381	171	202
Other income	454	224	257

Included in other income are sub-lease rentals of £18m (2007: £18m, 2006: £18m), and in 2008 only is a £47m gain from the Visa IPO.

Sterling £1 Preference Shares

1,000 Sterling cumulative callable preference shares of £1 each (the '£1 Preference Shares') were issued on 31st December 2004 at nil premium.

The £1 Preference Shares entitle the holders thereof to receive Sterling cumulative cash dividends out of distributable profits of Barclays Bank PLC, semi-annually at a rate reset semi-annually equal to the Sterling interbank offered rate for six-month sterling deposits.

Barclays Bank PLC shall be obliged to pay such dividends if: (1) it has profits available for the purpose of distribution under the Companies Act 1985 as at each dividend payment date; and (2) it is solvent on the relevant dividend payment date, provided that a capital regulations condition is satisfied on such dividend payment date. The dividends shall not be due and payable on the relevant dividend payment date except to the extent that Barclays Bank PLC could make such payment and still be solvent immediately thereafter. Barclays Bank PLC shall be considered solvent on any date if: (1) it is able to pay its debts to senior creditors as they fall due; and (2) its auditors have reported within the previous six months that its assets exceed its liabilities. If Barclays Bank PLC shall not pay, or shall pay only in part, a dividend for a period of seven days or more after the due date for payment, the holders of the £1 Preference Shares may institute proceedings for the winding-up of Barclays Bank PLC. No remedy against Barclays Bank PLC shall be available to the holder of any £1 Preference Shares for the recovery of amounts owing in respect of £1 Preference Shares other than the institution of proceedings for the winding-up of Barclays Bank PLC and/or proving in such winding-up. On a winding-up or other return of capital (other than a redemption or purchase by Barclays Bank PLC of any of its issued shares, or a reduction of share capital, permitted by the Articles of Barclays Bank PLC and under applicable law), the assets of Barclays Bank PLC available to shareholders shall be applied in priority to any payment to the holders of ordinary shares and any other class of shares in the capital of Barclays Bank PLC then in issue ranking junior to the £1 Preference Shares on such a return of capital and *pari passu* on such a return of capital with the holders of any other class of shares in the capital of Barclays Bank PLC then in issue (other than any class of shares in the capital of Barclays Bank PLC then in issue ranking in priority to the £1 Preference Shares on a winding-up or other such return of capital), in payment to the holders of the £1 Preference Shares of a sum equal to the aggregate of: (1) an amount equal to the dividends accrued thereon for the then current dividend period (and any accumulated arrears thereof) to the date of the commencement of the winding-up or other such return of capital; and (2) an amount equal to £1 per £1 Preference Share. After payment of the full amount of the liquidating distributions to which they are entitled, the holders of the £1 Preference Shares will have no right or claim to any of the remaining assets of Barclays Bank PLC and will not be entitled to any further participation in such return of capital. The £1 Preference Shares are redeemable at the option of Barclays Bank PLC, in whole but not in part only, subject to the Companies Act 1985 and its Articles. Holders of the £1 Preference Shares are not entitled to receive notice of, or to attend, or vote at, any general meeting of Barclays Bank PLC.

Euro Preference Shares

100,000 Euro 4.875% non-cumulative callable preference shares of €100 each (the '4.875% Preference Shares') were issued on 8th December 2004 for a consideration of €993.6m (£688.4m), of which the nominal value was €10m and the balance was share premium. The 4.875% Preference Shares entitle the holders thereof to receive Euro non-cumulative cash dividends out of distributable profits of Barclays Bank PLC, annually at a fixed rate of 4.875% per annum on the amount of €10,000 per preference share until 15th December 2014, and thereafter quarterly at a rate reset quarterly equal to 1.05% per annum above the Euro interbank offered rate for three-month Euro deposits.

The 4.875% Preference Shares are redeemable at the option of Barclays Bank PLC, in whole but not in part only, on 15th December 2014, and on each dividend payment date thereafter at €10,000 per share plus any dividends accrued for the then current dividend period to the date fixed for redemption.

140,000 Euro 4.75% non-cumulative callable preference shares of €100 each (the '4.75% Preference Shares') were issued on 15th March 2005 for a consideration of €1,383.3m (£966.7m), of which the nominal value was €14m and the balance was share premium. The 4.75% Preference Shares entitle the holders thereof to receive Euro non-cumulative cash dividends out of distributable profits of Barclays Bank PLC, annually at a fixed rate of 4.75% per annum on the amount of €10,000 per preference share until 15th March 2020, and thereafter quarterly at a rate reset quarterly equal to 0.71% per annum above the Euro interbank offered rate for three-month Euro deposits.

The 4.75% Preference Shares are redeemable at the option of Barclays Bank PLC, in whole but not in part only, on 15th March 2020, and on each dividend payment date thereafter at €10,000 per share plus any dividends accrued for the then current dividend period to the date fixed for redemption.

Sterling Preference Shares

75,000 Sterling 6.0% non-cumulative callable preference shares of £100 each (the '6.0% Preference Shares') were issued on 22nd June 2005 for a consideration of £732.6m, of which the nominal value was £7.5m and the balance was share premium. The 6.0% Preference Shares entitle the holders thereof to receive Sterling non-cumulative cash dividends out of distributable profits of Barclays Bank PLC, annually at a fixed rate of 6.0% per annum on the amount of £10,000 per preference share until 15th December 2017, and thereafter quarterly at a rate reset quarterly equal to 1.42% per annum above the London interbank offered rate for three-month Sterling deposits.

The 6.0% Preference Shares are redeemable at the option of Barclays Bank PLC, in whole but not in part only, on 15th December 2017, and on each dividend payment date thereafter at £10,000 per share plus any dividends accrued for the then current dividend period to the date fixed for redemption.

US Dollar Preference Shares

100,000 US Dollar 6.278% non-cumulative callable preference shares of US\$100 each (the '6.278% Preference Shares'), represented by 100,000 American Depositary Shares, Series 1, were issued on 8th June 2005 for a consideration of US\$995.4m (£548.1m), of which the nominal value was US\$10m and the balance was share premium. The 6.278% Preference Shares entitle the holders thereof to receive US Dollar non-cumulative cash dividends out of distributable profits of Barclays Bank PLC, semi-annually at a fixed rate of 6.278% per annum on the amount of US\$10,000 per preference share until 15th December 2034, and thereafter quarterly at a rate reset quarterly equal to 1.55% per annum above the London interbank offered rate for three-month US Dollar deposits.

The 6.278% Preference Shares are redeemable at the option of Barclays Bank PLC, in whole but not in part only, on 15th December 2034, and on each dividend payment date thereafter at US\$10,000 per share plus any dividends accrued for the then current dividend period to the date fixed for redemption.

30 million US Dollar 6.625% non-cumulative callable preference shares of US\$0.25 each (the '6.625% Preference Shares'), represented by 30 million American Depositary Shares, Series 2, were issued on 25th and 28th April 2006 for a consideration of US\$727m (£406m), of which the nominal value was US\$7.5m and the balance was share premium. The 6.625% Preference Shares entitle the holders thereof to receive US Dollar non-cumulative cash dividends out of distributable profits of Barclays Bank PLC, quarterly at a fixed rate of 6.625% per annum on the amount of US\$25 per preference share.

k Called up share capital (continued)

The 6.625% Preference Shares are redeemable at the option of Barclays Bank PLC, in whole but not in part only, on 15th September 2011, and on each dividend payment date thereafter at US\$25 per share plus any dividends accrued for the then current dividend period to the date fixed for redemption.

55 million US Dollar 7.1% non-cumulative callable preference shares of US\$0.25 each (the '7.1% Preference Shares'), represented by 55 million American Depositary Shares, Series 3, were issued on 13th September 2007 for a consideration of US\$1,335m (£657m), of which the nominal value was US\$13.75m and the balance was share premium. The 7.1% Preference Shares entitle the holders thereof to receive US Dollar non-cumulative cash dividends out of distributable profits of Barclays Bank PLC, quarterly at a fixed rate of 7.1% per annum on the amount of US\$25 per preference share.

The 7.1% Preference Shares are redeemable at the option of Barclays Bank PLC, in whole or in part, on 15th December 2012, and on each dividend payment date thereafter at US\$25 per share plus any dividends accrued for the then current dividend period to the date fixed for redemption.

46 million US Dollar 7.75% non-cumulative callable preference shares of US\$0.25 each (the '7.75% Preference Shares'), represented by 46 million American Depositary Shares, Series 4, were issued on 7th December 2007 for a consideration of US\$1,116m (£550m), of which the nominal value was US\$11.5m and the balance was share premium. The 7.75% Preference Shares entitle the holders thereof to receive US Dollar non-cumulative cash dividends out of distributable profits of Barclays Bank PLC, quarterly at a fixed rate of 7.75% per annum on the amount of US\$25 per preference share.

The 7.75% Preference Shares are redeemable at the option of Barclays Bank PLC, in whole or in part, on 15th December 2013, and on each dividend payment date thereafter at US\$25 per share plus any dividends accrued for the then current dividend period to the date fixed for redemption.

106 million US Dollar 8.125% non-cumulative callable preference shares of US\$0.25 each (the '8.125% Preference Shares'), represented by 106 million American Depositary Shares, Series 5, were issued on 11th April 2008 and 25th April 2008 for a total consideration of US\$2,650m (£1,345m), of which the nominal value was US\$26.5m and the balance was share premium. The 8.125% Preference Shares entitle the holders thereof to receive US Dollar non-cumulative cash dividends out of distributable profits of Barclays Bank PLC, quarterly at a fixed rate of 8.125% per annum on the amount of US\$25 per preference share.

The 8.125% Preference Shares are redeemable at the option of Barclays Bank PLC, in whole or in part, on 15th June 2013, and on each dividend payment date thereafter at US\$25 per share plus any dividends accrued for the then current dividend period to the date fixed for redemption.

No redemption or purchase of any 4.875% Preference Shares, the 4.75% Preference Shares, the 6.0% Preference Shares, the 6.278% Preference Shares, the 6.625% Preference Shares, the 7.1% Preference Shares, the 7.75% Preference Shares and the 8.125% Preference Shares (together, the 'Preference Shares') may be made by Barclays Bank PLC without the prior notification to the UK FSA and any such redemption will be subject to the Companies Act 1985 and the Articles of Barclays Bank PLC.

On a winding-up of Barclays Bank PLC or other return of capital (other than a redemption or purchase of shares of Barclays Bank PLC, or a reduction of share capital), a holder of Preference Shares will rank in the application of assets of Barclays Bank PLC available to shareholders: (1) junior to the holder of any shares of Barclays Bank PLC in issue ranking in priority to the Preference Shares; (2) equally in all respects with holders of other preference shares and any other shares of Barclays Bank PLC in issue ranking *pari passu* with the Preference Shares; and (3) in priority to the holders of ordinary shares and any other shares of Barclays Bank PLC in issue ranking junior to the Preference Shares.

The holders of the £400m 6% Callable Perpetual Core Tier One Notes and the US\$1,000m 6.86% Callable Perpetual Core Tier One Notes of Barclays Bank PLC (together, the 'TONs') and the holders of the US\$1,250m 8.55% Step-up Callable Perpetual Reserve Capital Instruments, the US\$750m 7.375% Step-up Callable Perpetual Reserve Capital Instruments, the €850m 7.50% Step-up Callable Perpetual Reserve Capital Instruments, the £500m 5.3304% Step-up Callable Perpetual Reserve Capital Instruments, the US\$1,350m 5.926% Step-up Callable Perpetual Reserve Capital Instruments, the £500m 6.3688% Step-up Callable Perpetual Reserve Capital Instruments, the US\$1,250m 7.434% Step-up Callable Perpetual Reserve Capital Instruments and the £3,000m 14% Step-up Callable Perpetual Reserve Capital Instruments of Barclays Bank PLC (together, the 'RCIs') would, for the purposes only of calculating the amounts payable in respect of such securities on a winding-up of Barclays Bank PLC, subject to limited exceptions and to the extent that the TONs and the RCIs are then in issue, rank *pari passu* with the holders of the most senior class or classes of preference shares then in issue in the capital of Barclays Bank PLC. Accordingly, the holders of the preference shares would rank equally with the holders of such TONs and RCIs on such a winding-up of Barclays Bank PLC (unless one or more classes of shares of Barclays Bank PLC ranking in priority to the preference shares are in issue at the time of such winding-up, in which event the holders of such TONs and RCIs would rank equally with the holders of such shares and in priority to the holders of the preference shares).

Subject to such ranking, in such event, holders of the preference shares will be entitled to receive out of assets of Barclays Bank PLC available for distributions to shareholders, liquidating distributions in the amount of €10,000 per 4.875% Preference Share, €10,000 per 4.75% Preference Share, £10,000 per 6.0% Preference Share, US\$10,000 per 6.278% Preference Share, US\$25 per 6.625% Preference Share, US\$25 per 7.1% Preference Share, US\$25 per 7.75% Preference Share and US\$0.25 per 8.125% Preference Share, plus, in each case, an amount equal to the accrued dividend for the then current dividend period to the date of the commencement of the winding-up or other such return of capital. If a dividend is not paid in full on any preference shares on any dividend payment date, then a dividend restriction shall apply.

This dividend restriction will mean that neither Barclays Bank PLC nor Barclays PLC may (a) declare or pay a dividend (other than payment by Barclays PLC of a final dividend declared by its shareholders prior to the relevant dividend payment date, or a dividend paid by Barclays Bank PLC to Barclays PLC or to a wholly owned subsidiary) on any of their respective ordinary shares, other preference shares or other share capital or (b) redeem, purchase, reduce or otherwise acquire any of their respective share capital, other than shares of Barclays Bank PLC held by Barclays PLC or a wholly owned subsidiary, until the earlier of: (1) the date on which Barclays Bank PLC next declares and pays in full a preference dividend; and (2) the date on or by which all the preference shares are redeemed in full or purchased by Barclays Bank PLC.

Holders of the preference shares are not entitled to receive notice of, or to attend, or vote at, any general meeting of Barclays Bank PLC. Barclays Bank PLC is not permitted to create a class of shares ranking as regards participation in the profits or assets of Barclays Bank PLC in priority to the preference shares, save with the sanction of a special resolution of a separate general meeting of the holders of the preference shares (requiring a majority of not less than three-fourths of the holders of the preference shares voting at the separate general meeting) or with the consent in writing of the holders of three-fourths of the preference shares.

Except as described above, the holders of the preference shares have no right to participate in the surplus assets of Barclays Bank PLC.

Included in other shareholders' equity are:

Issuances of reserve capital instruments which bear a fixed rate of interest ranging between 7.375%-8.55% until 2010 or 2011. After these dates, in the event that the reserve capital instruments are not redeemed, they will bear interest at rates fixed periodically in advance, based on London or European interbank rates. These instruments are repayable, at the option of the Bank, in whole on any coupon payment date falling in or after June or December 2010 or 2011. The Bank may elect to defer any payment of interest on the reserve capital instruments for any period of time. Whilst such deferral is continuing, neither the Bank nor Barclays PLC may declare or pay a dividend, subject to certain exceptions, on any of its ordinary shares or preference shares.

Issuance of capital notes which bear interest at rates fixed periodically in advance, based on London interbank rates. These notes are repayable in each case, at the option of the Bank, in whole on any interest payment date. The Bank is not obliged to make a payment of interest on its capital notes if, in the preceding six months, a dividend has not been declared or paid on any class of shares of Barclays PLC.

On ordinary shares		
Final dividend	1,030	791
Interim dividends	130	2,496
Dividends	1,160	3,287

These dividends are paid to enable Barclays PLC to fund its dividends to its shareholders and in 2007, to fund the repurchase by Barclays PLC of ordinary share capital.

Dividends paid on preference shares amounted to £390m (2007: £193m). Dividends paid on other equity instruments as detailed in Note m amounted to £112m (2007: £152m).

p Financial risks

The only significant financial instruments that are held by Barclays Bank PLC and not Barclays PLC are investments in Barclays PLC ordinary shares, dealt with as trading portfolio equity assets, debt securities and available for sale financial investments as appropriate.

There consequently are no significant differences in exposures to market risk, credit risk, liquidity risk and the fair value of financial instruments between Barclays PLC and Barclays Bank PLC, and no differences in the manner in which these financial risks are managed. Therefore the disclosures regarding financial risks appearing in Notes 46 to 49 are in all material respects the same for Barclays Bank PLC and Barclays PLC.

q Capital

The Barclays Bank PLC Group's policies and objectives for managing capital are the same as those for the Barclays PLC Group, disclosed in Note 52.

The table below provides details of the Barclays Bank PLC Group at 31st December 2008 and 2007.

	2008 Basel II £m	2007 Basel I £m
Total qualifying Tier 1 capital	37,101	26,534

Total deductions	(964)	(1,889)
Total net capital resources	58,493	41,768

r Segmental reporting

Segmental reporting by Barclays Bank PLC is the same as that presented in Note 53 to the Barclays PLC financial statements, except for:

- the difference in profit before tax of £42m (2007: £31m) between Barclays PLC and Barclays Bank PLC is included in Head office functions and other operations.
- the difference in total assets of £49m (2007: £222m) is represented by holdings of Barclays PLC shares held by the businesses.

Enhancing operational excellence

Staying close to our customers

Trinity Shopfit & Design Ltd is a successful shopfitting business based near Lincoln, run by Noel and Tracey Luther. In June 2008 managing cash flow became a problem as the business was expanding quicker than they had planned. We know the business well and have been working with the owners for many years and were able to quickly arrange a temporary increase in their overdraft facility. This was followed up by a personal, out of hours visit by their Barclays Local Business Manager, Susan Cadd, when a permanent solution was negotiated and secured. This is just one of many examples of Barclays staying close to our small business customers in the difficult economic environment.

“I have never known anyone spend their own time helping a business overcome problems like these. The dedicated and pragmatic approach from Barclays saved my business and has enabled us to keep growing”

Noel Luther

53° 16' 54"N
Lincoln, UK 12pm GMT

Shareholder information

Dividends on the ordinary shares of Barclays PLC

Barclays PLC has paid dividends on its ordinary shares every year without interruption since its incorporation in 1896.

As announced on 13th October 2008, in the light of the new capital ratios agreed with the FSA and in recognition of the need to maximise capital resources in the current economic climate, the Board has concluded that it would not be appropriate to pay a final dividend for 2008. The Board intends to resume dividend payments in the second half of 2009, at which time it is intended to pay dividends quarterly.

The dividends declared for each of the last five years were:

Pence per 25p ordinary share	2008	2007	2006	2005	2004
Interim	11.50	11.50	10.50	9.20	8.25
Final	–	22.50	20.50	17.40	15.75
Total	11.50	34.00	31.00	26.60	24.00

US Dollars per 25p ordinary share

	2008	2007	2006	2005	2004
Interim	0.20	0.23	0.20	0.16	0.15
Final	–	0.45	0.41	0.31	0.30
Total	0.20	0.68	0.61	0.47	0.45

The gross dividends applicable to an American Depositary Share (ADS) representing four ordinary shares, before deduction of withholding tax, are as follows:

US Dollars per American Depositary Share

	2008	2007	2006	2005	2004
Interim	0.82	0.93	0.80	0.65	0.60
Final	–	1.78	1.64	1.24	1.20
Total	0.82	2.71	2.44	1.89	1.80

Dividends expressed in Dollars are translated at the Noon Buying Rates in New York City for cable transfers in Pounds Sterling as certified for customs purposes by the Federal Reserve Bank of New York (the 'Noon Buying Rate') for the days on which dividends are paid. No representation is made that Pounds Sterling amounts have been, or could have been, or could be, converted into Dollars at these rates.

Trading market for ordinary shares of Barclays PLC

The nominal capital of Barclays PLC is divided into 13,996,000,000 ordinary shares of 25p each (ordinary shares) 0.4 million Sterling preference shares of £100 each, 0.4 million US Dollar preference shares of \$100 each, 150 million US Dollar preference shares of \$0.25 each, 0.4 million Euro preference shares of €100 each, 0.4 million Yen preference shares of ¥10,000 each and 1 million staff shares of £1 each. At the close of business on 31st December 2008, 8,371,830,617 ordinary shares were outstanding.

The principal trading market for Barclays PLC ordinary shares is the London Stock Exchange. Ordinary share listings were also obtained on the Tokyo Stock Exchange with effect from 1st August 1986 and the New York Stock Exchange (NYSE) with effect from 9th September 1986. During the year, the Company de-listed from the Tokyo Stock Exchange with effect from 28th June 2008.

Trading on the NYSE is in the form of ADSs under the symbol 'BCS'. Each ADS represents four ordinary shares and is evidenced by an American Depositary Receipt (ADR). The ADR depository is J P Morgan Chase Bank, N.A. Details of trading activity are published in the stock tables of leading daily newspapers in the US.

There were 926 ADR holders and 1,528 recorded holders of ordinary shares with US addresses at 31st December 2008, whose shareholdings represented approximately 4.22% of total outstanding ordinary shares on that date. Since certain of the ordinary shares and ADRs were held by brokers or other nominees, the number of recorded holders in the US may not be representative of the number of beneficial holders or of their country of residence.

The following table shows the high and low sales price for the ordinary shares during the periods indicated, based on mid-market prices at close of business on the London Stock Exchange and the high and low sale price for ADSs as reported on the NYSE composite tape.

Memorandum and Articles of Association

The Company was incorporated in England on 20th July 1896 under the Companies Acts 1862 to 1890 as a company limited by shares and was re-registered in 1982 as a public limited company under the Companies Acts 1948 to 1980. The Company is registered under company number 48839. The Company was re-registered as Barclays PLC on 1st January 1985.

The objects of the Company are set out in full in clause 4 of its Memorandum of Association which provides, among other things, that the Company's objects are to carry on business as an investment and holding company and the business of banking in all its aspects.

Directors

(i) The minimum number of Directors (excluding alternate Directors) is five. There is no maximum limit. There is no age limit for Directors.

(ii) Excluding executive remuneration and any other entitlement to remuneration for extra services (including service on board committees) under the Articles, a Director is entitled to a fee at a rate determined by the Board but the aggregate fees paid to all Directors shall not exceed £1,000,000 per annum or such higher amount as may be approved by an ordinary resolution of the Company. Each Director is entitled to reimbursement for all travelling, hotel and other expenses properly incurred by him/her in or about the performance of his/her duties.

(iii) No Director may act (either himself/herself or through his/her firm) as an auditor of the Company. A Director may hold any other office of the Company on such terms as the Board shall determine.

(iv) At each annual general meeting ('AGM') of the Company, one third of the Directors (rounded down) are required to retire from office by rotation and may offer themselves for re-election. The Directors so retiring are those who have been longest in office (and in the case of equality of service length are selected by lot). Other than a retiring Director, no person shall (unless recommended by the Board) be eligible for election unless a member notifies the Company Secretary in advance of his/her intention to propose a person for election.

(v) The Board has the power to appoint additional Directors or to fill a casual vacancy amongst the Directors. Any Director so appointed holds office until the next AGM, when he/she may offer himself/herself for re-election. He/she is not taken into account in determining the number of Directors retiring by rotation.

(vi) The Board may appoint any Director to any executive position or employment in the Company on such terms as they determine.

(vii) A Director may appoint either another Director or some other person approved by the Board to act as his/her alternate with power to attend Board meetings and generally to exercise the functions of the appointing Director in his/her absence (other than the power to appoint an alternate).

(viii) From 1st October 2008, the Board may authorise any matter in relation to which a Director has, or can have, a direct interest that conflicts, or possibly may conflict with, the Company's interests. Only Directors who have no interest in the matter being considered will be able to authorise the relevant matter and they may impose limits or conditions when giving authorisation if they think this is appropriate.

(ix) A Director may hold positions with or be interested in other companies and, subject to legislation applicable to the Company and the FSA's requirements, may contract with the Company or any other company in which the Company is interested. A Director may not vote or count towards the quorum on any resolution concerning any proposal in which he/she (or any person connected with him/her) has a material interest (other than by virtue of his/her interest in securities of the Company) or if he/she has a duty which conflicts or may conflict with the interests of the Company, unless the resolution relates to any proposal:

- (a) to indemnify a Director or provide him/her with a guarantee or security in respect of money lent by him/her to, or any obligation incurred by him/her or any other person for the benefit of (or at the request of), the Company (or any other member of the Group);
- (b) to indemnify or give security or a guarantee to a third party in respect of a debt or obligation of the Company (or any other member of the Group) for which the Director has personally assumed responsibility;
- (c) to obtain insurance for the benefit of Directors;
- (d) involving the acquisition by a Director of any securities of the Company pursuant to an offer to existing holders of securities or to the public;

(e) that the Director underwrite any issue of securities of the Company (or any of its subsidiaries);

(f) concerning any other company in which the Director is interested as an officer or creditor or shareholder but, broadly, only if he/she (together with his/her connected persons) is directly or indirectly interested in less than 1% of either any class of the issued equity share capital or of the voting rights of that company; and

(g) concerning any other arrangement for the benefit of employees of the Company (or any other member of the Group) under which the Director benefits or stands to benefit in a similar manner to the employees concerned and which does not give the Director any advantage which the employees to whom the arrangement relates would not receive.

(x) A Director may not vote or be counted in the quorum on any resolution which concerns his/her own employment or appointment to any office of the Company or any other company in which the Company is interested.

(xi) Subject to applicable legislation, the provisions described in subparagraphs (ix) and (x) may be relaxed or suspended by an ordinary resolution of the members of the Company or any applicable governmental or other regulatory body.

(xii) A Director is required to hold an interest in ordinary shares having a nominal value of at least £500, which currently equates to 2,000 Ordinary Shares unless restricted from acquiring or holding such interest by any applicable law or regulation or any applicable governmental or other regulatory body. A Director may act before acquiring those shares but must acquire the qualification shares within two months from his/her appointment. Where a Director is unable to acquire the requisite number of shares within that time owing to law, regulation or requirement of any governmental or other relevant authority, he/she must acquire the shares as soon as reasonably practicable once the restriction(s) end.

(xiii) The Board may exercise all of the powers of the Company to borrow money, to mortgage or charge its undertaking, property and uncalled capital and to issue debentures and other securities.

Classes of share

The Company only has Ordinary Shares in issue. However, the Company has authorised but unissued preference shares of £100, \$100, \$0.25, €100 and ¥10,000 each (together, the 'Preference Shares') which may (pursuant to a resolution passed by the shareholders of the Company at the AGM) be issued by the Board from time to time in one or more series with such rights and subject to such restrictions and limitations as the Board may determine. The Company also has authorised but unissued staff shares of £1 each. The Articles of Association contain provisions to the following effect:

(i) Dividends

Subject to the provisions of the Articles and applicable legislation, the Company in General Meeting may declare dividends on the Ordinary Shares by ordinary resolution, but such dividend may not exceed the amount recommended by the Board. The Board may also pay interim or final dividends if it appears they are justified by the Company's financial position.

Each Preference Share confers the right to a non-cumulative preferential dividend ('Preference Dividend') payable in such currency at such rates (whether fixed or calculated by reference to or in accordance with a specified procedure or mechanism), on such dates and on such other terms as may be determined by the Board prior to allotment thereof.

The Preference Shares rank in regard to payment of dividend in priority to the holders of Ordinary Shares and any other class of shares in the Company ranking junior to the Preference Shares.

Dividends may be paid on the Preference Shares if, in the opinion of the Board, the Company has sufficient distributable profits, after payment in full or the setting aside of a sum to provide for all dividends payable on (or in the case of shares carrying a cumulative right to dividends, before) the relevant dividend payment date on any class of shares in the Company ranking *pari passu* with or in priority to the relevant series of Preference Shares as regards participation in the profits of the Company.

If the Board considers that the distributable profits of the Company available for distribution are insufficient to cover the payment in full of Preference Dividends, Preference Dividends shall be paid to the extent of the distributable profits on a *pro rata* basis.

Notwithstanding the above, the Board may, at its absolute discretion, determine that any Preference Dividend which would otherwise be payable may either not be payable at all or only payable in part.

If any Preference Dividend on a series of Preference Shares is not paid, or is only paid in part, for the reasons described above, holders of Preference Shares will not have a claim in respect of such nonpayment.

If any dividend on a series of Preference Shares is not paid in full on the relevant dividend payment date, a dividend restriction shall apply. The dividend restriction means that, subject to certain exceptions, neither the Company nor Barclays Bank may (a) pay a dividend on, or (b) redeem, purchase, reduce or otherwise acquire, any of their respective ordinary shares, other preference shares or other share capital ranking equal or junior to the relevant series of Preference Shares until the earlier of such time as the Company next pays in full a dividend on the relevant series of Preference Shares or the date on which all of the relevant series of Preference Shares are redeemed.

All unclaimed dividends payable in respect of any share may be invested or otherwise made use of by the Board for the benefit of the Company until claimed. If a dividend is not claimed after 12 years of it becoming payable, it is forfeited and reverts to the Company.

The Board may (although it currently does not), with the approval of an ordinary resolution of the Company, offer shareholders the right to choose to receive an allotment of additional fully paid Ordinary Shares instead of cash in respect of all or part of any dividend.

(ii) Voting

Every member who is present in person or by proxy, or represented at any general meeting of the Company and who is entitled to vote has one vote on a show of hands. On a poll, every member who is present or represented has one vote for every share held. Any joint holder may vote in respect of jointly owned shares, but the vote of the senior holder (as determined by order in the share register) shall take precedence. If any sum payable remains unpaid in relation to a member's shareholding, that member is not entitled to vote that share or exercise any other right in relation to a meeting of the Company unless the Board otherwise determine.

If any member, or any other person appearing to be interested in any of the Company's Ordinary Shares, is served with a notice under Section 793 of the Companies Act 2006 and does not supply the Company with the information required in the notice, then the Board, in its absolute discretion, may direct that that member shall not be entitled to attend or vote at any meeting of the Company.

The Board may further direct that if the shares of the defaulting member represent 0.25% or more of the issued shares of the relevant class, that dividends or other monies payable on those shares shall be retained by the Company until the direction ceases to have effect and that no transfer of those shares shall be registered (other than certain specified 'approved transfers'). A direction ceases to have effect seven days after the Company has received the information requested, or when the Company is notified that an 'approved transfer' to a third party has occurred, or as the Board otherwise determines.

(iii) Transfers

Ordinary Shares may be held in either certificated or uncertificated form. Certificated Ordinary Shares shall be transferred in writing in any usual or other form approved by the Board and executed by or on behalf of the transferor. Transfers of uncertificated Ordinary Shares shall be made in accordance with the applicable regulations. The Board may make any arrangements to regulate and evidence the transfer of Ordinary Shares as they consider fit in accordance with applicable legislation and the rules of the FSA.

Registration of Ordinary Shares may be suspended, subject to applicable legislation, for such periods as the Board may determine (but for not more than 30 days in any calendar year).

The Board is not bound to register a transfer of partly paid Ordinary Shares, or fully paid shares in exceptional circumstances approved by the FSA. The Board may also decline to register an instrument of transfer of certificated Ordinary Shares unless it is duly stamped and deposited at the prescribed place and accompanied by the share certificate(s) and such other evidence as reasonably required by the Board to evidence right to transfer, it is in

respect of one class of shares only, and it is in favour of not more than four transferees (except in the case of executors or trustees of a member).

Preference Shares may be represented by share warrants to bearer or be in registered form.

Preference Shares represented by share warrants to bearer are transferred by delivery of the relevant warrant. Preference Shares in registered form shall be transferred in writing in any usual or other form approved by the Board and executed by or on behalf of the transferor. The Company's registrar shall register such transfers of Preference Shares in registered form by making the appropriate entries in the register of Preference Shares.

(iv) Return of Capital and Liquidation

In the event of any return of capital by reduction of capital or on liquidation, the holders of Ordinary Shares are entitled to receive such capital in proportion to the amounts paid up or credited as paid up on the shares of each class.

Each Preference Share shall confer, in the event of a winding up or any return of capital by reduction of capital (other than, unless otherwise provided by their terms of issue, a redemption or purchase by the Company of any of its issued shares, or a reduction of share capital), the right to receive out of the surplus assets of the Company available for distribution amongst the members and in priority to the holders of the Ordinary Shares and any other shares in the Company ranking junior to the relevant series of Preference Shares and *pari passu* with any other class of Preference Shares, repayment of the amount paid up or treated as paid up in respect of the nominal value of the Preference Share together with any premium which was paid or treated as paid when the Preference Share was issued in addition to an amount equal to accrued and unpaid dividends.

(v) Redemption and Purchase

Subject to applicable legislation and the rights of the other shareholders, any share may be issued on terms that it is, at the option of the Company or the holder of such share, redeemable. While the Company currently has no redeemable shares in issue, any series of Preference Shares issued in the future will be redeemable, in whole or in part, at the option of the Company on a date not less than five years after the date on which such series of Preference Shares was first issued. The Company may purchase its own shares subject to the provisions of applicable legislation, the Articles and the approval of any class of convertible shares in issue (by special resolution or written consent of 75% of such class).

(vi) Calls on capital

The Directors may make calls upon the members in respect of any monies unpaid on their shares. A person upon whom a call is made remains liable even if the shares in respect of which the call is made have been transferred. Interest will be chargeable on any unpaid amount called at a rate determined by the Board (of not more than 20%).

If a member fails to pay any call in full (following notice from the Board that such failure will result in forfeiture of the relevant shares), such shares (including any dividends declared but not paid) may be forfeited by a resolution of the Board, and will become the property of the Company. Forfeiture shall not absolve a previous member for amounts payable by him/her (which may continue to accrue interest).

The Company also has a lien over all partly paid shares of the Company for all monies payable or called on that share and over the debts and liabilities of a member to the Company. If any monies which are the subject of the lien remain unpaid after a notice from the Board demanding payment, the Company may sell such shares.

(vii) Variation of Rights

The rights attached to any class of shares may be varied with the sanction of a special resolution passed at a separate meeting of the holders of the shares of that class.

The rights of shares shall not (unless expressly provided by the rights attached to such shares) be deemed varied by the creation of further shares ranking equally with them.

Annual and other general meetings

The Company is required to hold an annual general meeting in addition to such other general meetings as the Directors think fit. The type of the meeting will be specified in the notice calling it. Under the Companies Act 2006, the AGM must be held within six months of the financial year end. A general meeting may be convened by the Board on requisition in accordance with the applicable legislation.

In the case of an AGM, 21 clear days' notice is required. In other cases 14 clear days' notice is required. The notice must be in writing and must specify the place, the day and the hour of the meeting, and the general nature of the business to be transacted. A notice convening a meeting to pass a special resolution shall specify the intention to propose the resolution as such. The accidental failure to give notice of a general meeting or the non-receipt of such notice will not invalidate the proceedings at such meeting.

Subject as noted above, all shareholders are entitled to attend and vote at general meetings. The Articles do, however, provide that arrangements may be made for simultaneous attendance at a general meeting at a place other than that specified in the notice of meeting, in which case shareholders may be excluded from the specified place.

Holders of Preference Shares have no right to receive notice of, attend or vote at, any general meetings of the Company as a result of holding Preference Shares.

Limitations on foreign shareholders

There are no restrictions imposed by the Company's Memorandum or Articles of Association or (subject to the effect of any economic sanctions that may be in force from time to time) by current UK laws which relate only to non-residents of the UK and which limit the rights of such non-residents to hold or (when entitled to do so) vote the Company's Ordinary Shares.

Notices

A document or information may be sent by the Company in hard copy form, electronic form, by being made available on a website, or by another means agreed with the recipient. A document or information may only be sent in electronic form to a person who has agreed to receive it in that form or, in the case of a company, who has been deemed to have so agreed pursuant to applicable legislation. A document or information may only be sent by being made available on a website if the recipient has agreed to receive it in that form or has been deemed to have so agreed pursuant to applicable legislation, and has not revoked that agreement.

In respect of joint holdings, documents or information shall be sent to the joint holder whose name stands first in the register.

A member who (having no registered address within the UK) has not supplied an address in the UK at which documents or information may be sent is not entitled to have documents or information sent to him/her.

Alteration of share capital

The Company may, by way of ordinary resolution:

- increase its share capital by a sum to be divided into shares of an amount prescribed by the resolution;
- consolidate and divide all or any of its share capital into shares of a larger nominal amount;
- subject to legislation, sub-divide all or part of its shares into shares of a smaller nominal amount and may decide by that resolution that the resulting shares have preference or other advantage or restrictions; and
- cancel any shares which, at the date of the resolution, have not been subscribed or agreed to have been subscribed for and diminish the amount of its share capital by the amount of the shares so cancelled.

The Company may also, by special resolution, reduce its share capital or capital redemption reserve or any share premium account or other undistributable reserve in any manner authorised by legislation.

The Company may, by ordinary resolution, upon the recommendation of the Board capitalise all or any part of an amount standing to the credit of a reserve or fund to be set free for distribution provided that amounts from the share premium account, capital redemption reserve or any profits not available for distribution should be applied only in paying up unissued shares issued to members and no unrealised profits shall be applied in paying up debentures of the Company or any amount unpaid on any share in the capital of the Company.

Indemnity

Subject to applicable legislation, every current and former Director or other officer of the Company (other than any person engaged by the company as auditor) shall be indemnified by the Company against any liability in relation to the Company, other than (broadly) any liability to the Company or a member of the Group, or any criminal or regulatory fine.

Officers of the Group

Peter Estlin	Group Financial Controller	Appointed 2008
Lawrence Dickinson	Company Secretary	Appointed 2002
Patrick Gonsalves	Joint Secretary, Barclays Bank PLC	Appointed 2002
Mark Harding	Group General Counsel	Appointed 2003
Robert Le Blanc	Group Risk Director	Appointed 2004

Taxation

The following is a summary of the principal tax consequences for holders of Ordinary Shares of Barclays PLC, Preference Shares of the Bank, or ADSs representing such Ordinary Shares or Preference Shares, and who are citizens or residents of the UK or US, or otherwise who are subject to UK tax or US federal income tax on a net income basis in respect of such securities, that own the shares or ADSs as capital assets for tax purposes. It is not, however, a comprehensive analysis of all the potential tax consequences for such holders, and it does not discuss the tax consequences of members of special classes of holders subject to special rules or holders that, directly or indirectly, hold 10% or more of Barclays voting stock. Investors are advised to consult their tax advisers regarding the tax implications of their particular holdings, including the consequences under applicable state and local law, and in particular whether they are eligible for the benefits of the Treaty, as defined below.

A US holder is a beneficial owner of shares or ADSs that is, for US federal income tax purposes, (i) a citizen or resident of the US, (ii) a US domestic corporation, (iii) an estate whose income is subject to US federal income tax regardless of its source, or (iv) a trust if a US court can exercise primary supervision over the trust's administration and one or more US persons are authorised to control all substantial decisions of the trust.

Unless otherwise noted, the statements of tax laws set out below are based on the tax laws of the UK in force as at 27th February 2009 and are subject to any subsequent changes in UK law, in particular any announcements made in the Chancellor's expected UK Budget in April 2009.

This section is also based on the Internal Revenue Code of 1986, as amended, its legislative history, existing and proposed regulations, published rulings and court decisions (the Code), and on the Double Taxation Convention between the UK and the US as entered into force in March 2003 (the Treaty), all of which are subject to change, possibly on a retroactive basis.

This section is based in part upon the representations of the ADR Depositary and the assumption that each obligation of the Depositary

Agreement and any related agreement will be performed in accordance with its terms.

For purposes of the Treaty, the Estate and Gift Tax Convention between the United Kingdom and the United States, and the Code, the holders of ADRs evidencing ADSs will be treated as owners of the underlying ordinary shares or preference shares, as the case may be. Generally, exchanges of shares for ADRs and ADRs for shares will not be subject to US federal income tax or to UK capital gains tax.

Taxation of UK holders

Taxation of dividends

In accordance with UK law, Barclays PLC and the Bank pay dividends on ordinary shares and preference shares without any deduction or withholding tax in respect of any taxes imposed by the UK government or any UK taxing authority.

If the shareholder is a UK resident individual liable to income tax only at the basic rate, then there will be no further tax liability in respect of the dividend received. If, however, the individual shareholder is subject to income tax at the higher rate (currently 40%), there will be a further liability to tax. Higher rate taxpayers are taxable on dividend income at a special rate (currently 32.5%) against which can be offset a tax credit of one-ninth of the cash dividend received. Tax credits are not repayable to shareholders with no tax liability.

Taxation of shares under the Dividend Reinvestment Plan

Where a shareholder elects to purchase shares using their cash dividend, the individual will be liable for income tax on dividends reinvested in the Plan on the same basis as if they had received the cash and arranged the investment themselves. They should accordingly include the dividend received in their annual tax return in the normal way. The tax consequences for a UK individual are the same as described in 'Taxation of dividends' above.

Taxation of capital gains

Where shares are disposed of by open market sale, a capital gain may result if the disposal proceeds exceed the sum of the base cost of the shares sold and any other allowable deductions such as share dealing costs and indexation relief (up to 5th April 1998). To arrive at the total base cost of any Barclays PLC shares held, the amount subscribed for rights taken up in 1985 and 1988 must be added to the cost of all other shares held. For this purpose, current legislation permits the market valuation at 31st March 1982 to be substituted for the original cost of shares purchased before that date.

The calculations required to compute chargeable capital gains may be complex. Capital gains may also arise from the gifting of shares to connected parties such as relatives (although not spouses or civil partners) and family trusts. Shareholders are advised to consult their personal financial adviser if further information regarding a possible tax liability in respect of their holdings of Barclays PLC shares is required.

Stamp duty

Stamp duty or stamp duty reserve tax at the rate of 0.5% is normally payable on the purchase price of shares acquired.

Inheritance tax

An individual may be liable to inheritance tax on the transfer of ordinary shares or preference shares. Where an individual is liable, inheritance tax may be charged on the amount by which the value of his or her estate is reduced as a result of any transfer by way of gift or other gratuitous transaction made by them or treated as made by them.

Taxation of US holders

Taxation of dividends

Subject to PFIC rules discussed below, a US holder is subject to US federal income taxation on the gross amount of any dividend paid by Barclays PLC or the Bank, as applicable, out of its current or accumulated earnings and profits (as determined for US federal income tax purposes). Dividends paid to a non-corporate US holder in taxable years beginning before 1st January 2011 that constitute qualified dividend income will be taxable to the holder at a maximum tax rate of 15%, provided that the holder has a holding period of the shares or ADSs of more than 60 days during the 121-day period beginning 60 days before the ex-dividend date (or, in the case of preference shares or ADSs relating thereto, if the dividend is attributable to a period or periods aggregating over 366 days, provided that the holder holds the shares or ADSs for more than 90 days during the 181-day period beginning 90 days before the ex-dividend date) and meets certain other holding period requirements. Dividends paid by Barclays PLC or the Bank, as applicable, with respect to the ordinary or preference shares or ADSs will generally be qualified dividend income.

A US holder will not be subject to UK withholding tax. The US holder will include in gross income for US federal income tax purposes the amount of the dividend actually received from Barclays PLC or the Bank. Dividends must be included in income when the US holder, in the case of shares, or the Depositary, in the case of ADSs, actually or constructively receives the dividend, and will not be eligible for the dividends-received deduction generally allowed to US corporations in respect of dividends received from other US corporations. For foreign tax credit purposes, dividends will generally be income from sources outside the United States and will, depending on a US holder's circumstances, be either 'passive' or 'general' income for purposes of computing the foreign tax credit allowable to a US holder.

The amount of the dividend distribution includable in income will be the US Dollar value of the pound Sterling payments made, determined at the spot Pound Sterling/US Dollar rate on the date the dividend distribution is includable in income, regardless of whether the payment is in fact converted into US Dollars. Generally, any gain or loss resulting from currency exchange fluctuations during the period from the date the dividend payment is includable in income to the date the payment is converted into US Dollars will be treated as ordinary income or loss and, for foreign tax credit limitation purposes, from sources within the US and will not be eligible for the special tax rate applicable to qualified dividend income.

Distributions in excess of current or accumulated earnings and profits, as determined for US federal income tax purposes, will be treated as a return of capital to the extent of the US holder's basis in the shares or ADSs and thereafter as capital gain.

Shareholder information

Taxation of capital gains

Subject to PFIC rules discussed below, generally, US holders will not be subject to UK tax, but will be subject to US tax on capital gains realised on the sale or other disposition of ordinary shares, preference shares or ADSs. Capital gain of a noncorporate US holder that is recognised in taxable years beginning before 1st January 2011 is generally taxed at a maximum rate of 15% where the holder has a holding period of greater than one year. The gain or loss will generally be income or loss from sources within the United States for foreign tax credit limitation purposes.

Taxation of premium on redemption or purchase of shares

No refund of tax will be available under the Treaty in respect of any premium paid on a redemption of preference shares by the Bank or on a purchase by Barclays PLC of its own shares. For US tax purposes, redemption premium generally will be treated as an additional amount realised in the calculation of gain or loss.

Taxation of passive foreign investment companies (PFICs)

Barclays PLC and the Bank believe that their respective shares and ADSs should not be treated as stock of a PFIC for US federal income tax purposes, but this conclusion is a factual determination that is made annually and thus may be subject to change. If Barclays PLC or the Bank were to be treated as a PFIC, unless a US holder elects to be taxed annually on a mark-to-market basis with respect to the shares or ADSs, gain realised on the sale or other disposition of their shares or ADSs would in general not be treated as capital gain. Instead, for a US holder, such gain and certain 'excess distributions' would be treated as having been realised ratably over the holding period for the shares or ADSs and would be taxed at the highest tax rate in effect for each such year to which the gain was allocated, together with an interest charge in respect of the tax attributable to each such year. With certain exceptions, a US holder's shares or ADSs will be treated as stock in a PFIC if Barclays PLC or the Bank was a PFIC at any time during such holder's holding period in their shares or ADSs. Dividends that a US holder receives from Barclays PLC or the Bank will not be eligible for the special tax rates applicable to qualified dividend income if Barclays PLC or the Bank are treated as a PFIC with respect to such US holder either in the taxable year of the distribution or the preceding taxable year, but instead will be taxable at rates applicable to ordinary income.

Stamp duty

No UK stamp duty is payable on the transfer of an ADS, provided that the separate instrument of transfer is not executed in, and remains at all times outside, the UK.

Estate and gift tax

Under the Estate and Gift Tax Convention between the United Kingdom and the United States, a US holder generally is not subject to UK inheritance tax.

Exchange controls and other limitations affecting security holders

Other than certain economic sanctions which may be in force from time to time, there are currently no UK laws, decrees or regulations which would affect the transfer of capital or remittance of dividends, interest and other payments to holders of Barclays securities who are not residents of the UK. There are also no restrictions under the Articles of Association of either Barclays PLC or the Bank, or (subject to the effect of any such economic sanctions) under current UK laws, which relate only to non-residents of the UK, and which limit the right of such non-residents to hold Barclays securities or, when entitled to vote, to do so.

Documents on display

It is possible to read and copy documents that have been filed by Barclays PLC and Barclays Bank PLC with the US Securities and Exchange Commission at the US Securities and Exchange Commission's office of Investor Education and Assistance located at 100 F Street, NE, Washington DC 20549. Please call the US Securities and Exchange Commission at 1-800-SEC-0330 for further information on the public reference rooms and their copy charges. Filings with the US Securities and Exchange Commission are also available to the public from commercial document retrieval services, and from the website maintained by the US Securities and Exchange Commission at www.sec.gov.

Freehold	Ownership with absolute rights in perpetuity
Loans and advances	Lendings
Loan capital	Long-term debt
Net asset value	Book value
Profit	Income
Share capital	Ordinary shares, capital stock or common stock issued and fully paid
Share premium account	Additional paid-up capital or paid-in surplus (not distributable)
Shares in issue	Shares outstanding
Write-offs	Charge-offs

'Income' refers to total income net of insurance claims, unless otherwise specified.

'Profit before business disposals' represents profit before tax and disposal of subsidiaries, associates and joint ventures.

'Cost:income ratio' is defined as operating expenses compared to total income net of insurance claims.

'Cost:net income' ratio is defined as operating expenses compared to total income net of insurance claims less impairment charges.

'Compensation:net income ratio' is defined as staff compensation based costs compared to total income net of insurance claims less impairment charges.

'Return on average economic capital' is defined as attributable profit compared to average economic capital.

'Average net income generated per member of staff' is defined as total operating income compared to the average of staff numbers for the reporting period.

'Risk Tendency' is a statistical estimate of the average loss for each loan portfolio for a 12-month period, taking into account the size of the portfolio and its risk characteristics under current economic conditions, and is used to track the change in risk as the portfolio of loans changes over time.

'Economic profit' is defined as profit after tax and minority interests less capital charge (average shareholders' equity excluding minority interests multiplied by the Group cost of capital).

'Daily Value at Risk (DVaR)' is an estimate of the potential loss which might arise from unfavourable market movements, if the current positions were to be held unchanged for one business day, measured to a confidence level of 98%.

'Absa Group Limited' refers to the consolidated results of the South African group of which the parent company is listed on the Johannesburg Stock Exchange (JSE Limited) in which Barclays owns a controlling stake.

'Absa' refers to the results for Absa Group Limited as consolidated into the results of Barclays PLC; translated into Sterling with adjustments for amortisation of intangible assets, certain head office adjustments, transfer pricing and minority interests.

'Global Retail and Commercial Banking – Absa' is the portion of Absa's results that is reported by Barclays within the Global Retail and Commercial Banking business.

'Absa Capital' is the portion of Absa's results that is reported by Barclays within the Barclays Capital business.

Report Cover: Produced using 50% recycled fibre and pulp bleached using Elemental Chlorine Free (ECF) process. Report Text: Produced from 100% post consumer waste. Both mills are certified to the ISO 14001 environmental management standard.
